algebra teachers: The Future of the Teaching and Learning of Algebra Kaye Stacey, Helen Chick, Margaret Kendal, 2006-04-11 Kaye Stacey, Helen Chick, and Margaret Kendal The University of Melbourne, Australia Abstract: This section reports on the organisation, procedures, and publications of the ICMI Study, The Future of the Teaching and Learning of Algebra. Key words: Study Conference, organisation, procedures, publications The International Commission on

Mathematical Instruction (ICMI) has, since the 1980s, conducted a series of studies into topics of particular significance to the theory and practice of contemporary mathematics education. Each ICMI Study involves an international seminar, the "Study Conference", and culminates in a published volume intended to promote and assist discussion and action at the international, national, regional, and institutional levels. The ICMI Study running from 2000 to 2004 was on The Future of the Teaching and Learning of Algebra, and its Study Conference was held at The University of Melbourne, Australia from December to 2001. It was the first study held in the Southern Hemisphere. There are several reasons why the future of the teaching and learning of algebra was a timely focus at the beginning of the twenty first century. The strong research base developed over recent decades enabled us to take stock of what has been achieved and also to look forward to what should be done and what might be achieved in the future. In addition, trends evident over recent years have intensified. Those particularly affecting school mathematics are the "massification" of education—continuing in some countries whilst beginning in others—and the advance of technology.

algebra teachers: *Second Handbook of Research on Mathematics Teaching and Learning* Frank K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook, namely, mathematics education researchers and other scholars conducting work in mathematics education. This group includes college and university faculty, graduate students, investigators in research and development centers, and staff members at federal, state, and local agencies that conduct and use research within the discipline of mathematics. The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work. The Handbook should also be a useful textbook for graduate research seminars. In addition to the audience mentioned above, the present Handbook contains chapters that should be relevant to four other groups: teacher educators, curriculum developers, state and national policy makers, and test developers and others involved with assessment. Taken as a whole, the chapters reflects the mathematics education research community's willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community.

algebra teachers: Professional Communities and the Work of High School Teaching Milbrey W. McLaughlin, Joan E. Talbert, 2001-10-20 American high schools have never been under more pressure to reform: student populations are more diverse than ever, resources are limited, and teachers are expected to teach to high standards for all students. While many reformers look for change at the state or district level, the authors here argue that the most local contexts—schools, departments, and communities—matter the most to how well teachers perform in the classroom and how satisfied they are professionally. Their findings—based on one of the most extensive research projects ever done on secondary teaching—show that departmental cultures play a crucial role in classroom settings and expectations. In the same school, for example, social studies teachers described their students as apathetic and unwilling to work, while English teachers described the same students as bright, interesting, and energetic. With wide-ranging implications for educational practice and policy, this unprecedented look into teacher communities is essential reading for educators, administrators, and all those concerned with U. S. High Schools.

algebra teachers: Handbook of Research on Transforming Mathematics Teacher Education in the Digital Age Niess, Margaret, Driskell, Shannon, Hollebrands, Karen, 2016-04-22 The digital age provides ample opportunities for enhanced learning experiences for students; however, it can also present challenges for educators who must adapt to and implement new technologies in the classroom. The Handbook of Research on Transforming Mathematics Teacher Education in the Digital Age is a critical reference source featuring the latest research on the development of educators' knowledge for the integration of technologies to improve classroom instruction.

Investigating emerging pedagogies for preservice and in-service teachers, this publication is ideal for professionals, researchers, and educational designers interested in the implementation of technology in the mathematics classroom.

Bernardino, Viegas, Maria Clara, Pinto, José Alexandre, 2019-02-01 While already validated by the scientific community, multimodal narratives have the potential for a broader application, especially for improved teaching practices from a professional or a theoretical point of view. Applying multimodal narratives within professional development courses creates a focus on the teaching practices rather than the content itself. Multimodal Narratives in Research and Teaching Practices provides educator and researcher perspectives on the use of multimodal narratives as a tool to reflect and improve teaching practices. Covering such topics as professional development, online learning, and teacher education, this publication is designed for educators, academicians, administrators, and researchers.
