nys regents algebra 1: Reviewing the Success of Full-Service Community Schools in the US Mavis G. Sanders, Claudia Galindo, 2020-03-05 Originally published as a special issue of the Journal of Education for Students Placed at Risk, this expanded text provides new insights into the

successful, sustained implementation of Full-Service Community Schools (FSCSs) in the United States. Reviewing the Success of Full-Service Community Schools in the US documents the experiences of students, teachers, and communities involved in the establishment and growth of FSCSs. By considering how successful this reform strategy has been in meeting the needs of underserved communities, the text illustrates the potential these schools have to transform students' learning and outcomes. In particular, the studies illustrate the value these schools have in supporting low-income students and students of color. At the same time, by interrogating the defining pillars of FSCSs – expanded learning opportunities, integrated services, family and community engagement, and collaborative leadership – chapters identify challenges that if left unattended, could limit the transformative potential of this reform strategy. This groundbreaking text will be of great interest to graduate and postgraduate students, researchers, academics, professionals, and policy makers in the fields of Educational Change and School Reform, Multicultural Education, Sociology of Education, Education Policy, and School Management and Administration.

nys regents algebra 1: Pedagogical Content Knowledge in STEM Stephen Miles Uzzo, Sherryl Browne Graves, Erin Shay, Marisa Harford, Robert Thompson, 2018-10-25 This volume represents both recent research in pedagogical content knowledge (PCK) in science, technology, engineering and math (STEM), as well as emerging innovations in how PCK is applied in practice. The notion of "research to practice" is critical to validating how effectively PCK works within the clinic and how it can be used to improve STEM learning. As the need for more effective educational approaches in STEM grows, the importance of developing, identifying, and validating effective practices and practitioner competencies are needed. This book covers a wide range of topics in PCK in different school levels (middle school, college teacher training, teacher professional development), and different environments (museums, rural). The contributors believe that vital to successful STEM education practice is recognition that STEM domains require both specialized domain knowledge as well as specialized pedagogical approaches. The authors of this work were chosen because of their extensive fieldwork in PCK research and practice, making this volume valuable to furthering how PCK is used to enlighten the understanding of learning, as well as

providing practical instruction. This text helps STEM practitioners, researchers, and decision-makers further their interest in more effective STEM education practice, and raises new questions about STEM learning.

nys regents algebra 1: STEM Education Reform in Urban High Schools Margaret A. Eisenhart, Lois Weis, 2022-08-16 STEM Education Reform in Urban High Schools gives a nuanced view of the obstacles marginalized students face in STEM education—and explores how schools can better support STEM learners. Reporting the results of a nine-year ethnographic study, the book chronicles the outcomes of various STEM education reforms in eight public high schools with nonselective admissions policies and high proportions of low-income and minoritized students: four schools in Denver, Colorado, and four in Buffalo, New York. Margaret A. Eisenhart and Lois Weis follow the educational experiences of high-ability students from each school, tracking the students' high school-to-college-to-career trajectories. Through interviews with students, educators, and parents, as well as classroom and campus observations, the authors identify patterns in the educational paths of students who go on to great success in STEM occupations and those who do not. They discuss common mechanisms that undermine the stated goals of STEM programming—opportunity structures that are inequitable, erosion of program quality, and diversion of resources—as well as social and cultural constructs (the figured worlds of STEM) that exclude many minoritized students with potential for success from the STEM pipeline. On a broader scope, the book explores how and why STEM education reform efforts fail and succeed. With an eye toward greater access to STEM learning, the authors show how lessons of past measures can inform future STEM initiatives.
