pre algebra worksheets for 5th graders: Keepers of the American Dream Christine Sleeter, 2012-06-14 This book reports an ethnographic study of thirty teachers from eighteen schools who participated in a staff development programme in multicultural education. The study examines how multicultural education was actually presented to teachers, and areas in which their classroom teaching and perception of students changed over the two-year period. Although most of the teachers reported learning a good deal, changes in their teaching and their discussions of teaching were fairly limited. After reporting the data, the book examines why changes were limited, analyzing three areas: the nature of staff development and how multicultural education was packaged; the structure of schools as institutions; and the identities and life experiences of teachers as White women, often from working class backgrounds.

pre algebra worksheets for 5th graders: *Education and Technology Support for Children and Young Adults With ASD and Learning Disabilities* Kats, Yefim, Stasolla, Fabrizio, 2020-11-13 Among the disabilities covered at the state and federal levels, autism and related conditions are a sharply growing diagnostic category among children and young adults. In education, administrators and practitioners working with affected learners are continually faced with confronting difficult problems such as getting adequate personnel training and choosing appropriate tools and techniques that best fit the specific needs of their students while at the same time satisfying their budget, technical resources, curriculum, and profile of the ASD population they serve. The choice of appropriate tools is especially complex due to the intrinsic connection between technical specifications, educational/therapeutic methods, and the wide variety of ASDs and related conditions. In this respect, tools chosen to support children may need to target those diagnosed not only with ASD but also with such co-morbidity conditions as attention deficit disorder. The instructional strategies and use of technology currently have room for improvement for online, hybrid, and face-to-face counseling settings. Also, an effective evaluation of educational technologies and tools would be fundamentally incomplete without a thorough understanding and assessment of the related special education practices as well as psychological and neurological issues specific for ASD and learning disabilities. *Education and Technology Support for Children and Young Adults With ASD and Learning Disabilities* provides an in-depth analysis on the use of available technology solutions, instructional design methods, and assessment techniques in the context of standards and regulations in classroom or counseling settings. The chapters contain theoretical analyses, vital practical information, and case studies that can function as guidelines for those involved in helping

children and young adults with ASD or learning disabilities in online, hybrid, or face-to-face environments. While highlighting topics such as inclusive education, online gaming environments, assistive technologies, and cognitive development, this book is ideally intended for administrators, instructional technology specialists, special education faculty, counselors, instructional designers, course developers, social workers, and psychologists along with practitioners, stakeholders, researchers, and academicians interested in education and technology support for children and young adults with ASD and learning disabilities.
