anatomy conference 2024: Palestine and the Western Academe Walaa Alqaisiya, Nicola Perugini, 2025-11-03 The ongoing devastation in Gaza and other parts of Palestine, alongside the systematic destruction of Palestinian universities, has coincided with intensified censorship and repression within Western academic institutions. These developments reveal the distinctive position that Zionism and its defense has held for decades within Western imperial structures, creating patterns of epistemic injustice. Palestine and the Western Academe emerges from a collective sense of political and intellectual urgency in response to mounting repression against scholars and students working on and studying Palestine. While attacks on academic freedom and freedom of speech in Western academia have intensified, they have been met with new forms of resistance and disobedience, bolstered by coalitional anti- racist and anti- capitalist solidarities extending from Palestine globally. This edited volume brings together significant contributions from scholars and students offering fresh approaches to the epistemic and political struggles surrounding Palestine. It demonstrates the timely and enduring relevance of the Palestinian question to international academic spaces and is essential reading for academics, researchers, and students interested in Middle Eastern Studies, Political Science, International Relations, Critical Theory, Decolonial Studies, and Academic Freedom discourse. Most of the chapters in this book were originally published in Middle East Critique. This edition comes with several new chapters and an updated introduction, offering fresh perspectives and expanded analysis on these urgent and evolving issues.

anatomy conference 2024: Artificial Intelligence and Machine Learning for Industry 4.0

M. Thirunavukkarasan, S. A. Sahaaya Arul Mary, R. Sathiyaraj, G. S. Pradeep Ghantasala, Mudassir Khan, 2025-07-09 This book is essential for any leader seeking to understand how to leverage intelligent automation and predictive maintenance to drive innovation, enhance productivity, and minimize downtime in their manufacturing processes. Intelligent automation is widely considered to have the greatest potential for Industry 4.0 innovations for corporations. Industrial machinery is increasingly being upgraded to intelligent machines that can perceive, act, evolve, and interact in an industrial environment. The innovative technologies featured in this machinery include the Internet of Things, cyber-physical systems, and artificial intelligence. Artificial intelligence enables computer systems to learn from experience, adapt to new input data, and perform intelligent tasks. The significance of AI is not found in its computational models, but in how humans can use them. Consistently observing equipment to keep it from malfunctioning is the procedure of predictive maintenance. Predictive maintenance includes a periodic maintenance schedule and anticipates equipment failure rather than responding to equipment problems. Currently, the industry is struggling to adopt a viable and trustworthy predictive maintenance plan for machinery. The goal of predictive maintenance is to reduce the amount of unanticipated downtime that a machine experiences due to a failure in a highly automated manufacturing line. In recent years, manufacturing across the globe has increasingly embraced the Industry 4.0 concept. Greater solutions than those offered by conventional maintenance are promised by machine learning, revealing precisely how AI and machine learning-based models are growing more prevalent in numerous industries for intelligent performance and greater productivity. This book emphasizes technological developments that could have great influence on an industrial revolution and introduces the fundamental technologies responsible for directing the development of innovative firms. Decision-making requires a vast intake of data and customization in the manufacturing process, which managers and machines both deal with on a regular basis. One of the biggest issues in this field is the capacity to foresee when maintenance of assets is necessary. Leaders in the sector will have to make careful decisions about how, when, and where to employ these technologies. Artificial Intelligence and Machine Learning for Industry 4.0 offers contemporary technological advancements in AI and machine learning from an Industry 4.0 perspective, looking at their prospects, obstacles, and potential applications.

anatomy conference 2024: AI Aesthetics Jan-Noël Thon, Lukas R.A. Wilde, 2025-09-09 This

volume investigates the intersection of generative AI and media aesthetics from an interdisciplinary perspective. Combining in-depth theoretical reflection with a diverse selection of case studies, its authors explore the aesthetic forms of AI-generated medial objects as well as the cultural imaginaries that the latter draw upon. Bringing together a group of scholars from various geographic and disciplinary backgrounds, the chapters move within and across different conceptualizations of “AI aesthetics” that can be located in-between an “aesthetics-as-artistics” (that is primarily concerned with aesthetic judgments related to skill and connoisseurship) and an “aesthetics-as-aisthetics” (that identifies all kinds of embodied perception as its object). The book thus reflects on both the theoretical and the methodological implications of “AI aesthetics,” while also demonstrating that this is still very much an emerging research field and that no dominant conceptualization of “AI aesthetics” has yet emerged. Considering its decidedly international and interdisciplinary scope, *AI Aesthetics: AI-Generated Images between Artistics and Aisthetics* will appeal to scholars and students within media studies, cultural studies, literary studies, philosophy, art history, visual culture studies, digital humanities, and critical AI studies. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives (CC BY-NC-ND) 4.0 license.

anatomy conference 2024: The Political Economy of Dissent Peter Blunt, Cecilia Escobar, Vlassis Missos, 2025-10-22 In 2020 Noam Chomsky asserted that the time to panic about the existential threats posed by nuclear war, global warming, and the stifling of informed debate in supposedly open and democratic societies was upon us, and that it was the duty of concerned citizens to act accordingly. Hastened by the lingering aftermath of the 2008 financial crisis, the COVID-19 pandemic, the proxy war in Ukraine, the decline of US economic hegemony, and increasing hostility between the US and China, he concluded in early 2023 that unless the US could be persuaded to cooperate with its declared adversaries and capitalism could be overthrown or 'defanged', there was little hope for survival. The authors of this book argue that achieving these ends will depend greatly on effective individual and collective worldwide dissent. The book analyses and exemplifies dissent in the main domains of institutionalised capitalist control and the manufacture of uninformed consent, namely: political economy; education; the media and IT; work and trade unions; the commons and communities; and culture. And thereby gives voice and hope to the downtrodden and marginalised, including indigenous peoples and those of the global south. It provides an uplifting counter to the otherwise seemingly overwhelming expression of uninformed consent, one that will inspire by example and be an antidote to the fear and defeatism instilled by capitalist intransigence, indoctrination, and control. The book is addressed to students, scholars and researchers primarily, but its breadth of coverage, authenticity and plain writing style will appeal to activists, community organisers, and concerned citizens, both in industrialised countries and the global south.
