aesthetic anatomy wallpaper: **Disformations** Tomáš Jirsa, 2021-01-14 What happens when forms fall apart? And how do affects such as fear, shock, fascination, and desire drive and shape formal disturbances in modern literature, cinema, and contemporary art? Opening an interdisciplinary dialogue between cultural affect theory, media philosophy, and literary studies, Tomáš Jirsa explores how specific affective operations disrupt form only to generate new formations. To demonstrate the importance of the structural work of mutually interacting affects, *Disformations* provides close readings of four intermedia figures stretched out across modernist fictions, contemporary video art, and posthuman visual experiments-the faceless face, the wallpaper pattern, the garbage dump, and the empty chair. Analyzing a wide range of texts, images, and audiovisual works, from Vincent van Gogh and Charlotte Perkins Gilman to Rainer Maria Rilke, Gaston Leroux, and Richard Weiner, to Francis Bacon, Michel Tournier, Ingmar Bergman, Eugène Ionesco, Vladimir Nabokov, Joseph Kosuth, and Jan Šerých, this book opens up a new avenue for addressing how aesthetic forms desubjectify affects to mobilize their mediality and performative qualities. Jirsa's innovative theoretical framework and incisive readings offer a fresh inquiry into how artistic media produce their own figural thinking and in so doing compel us to think with them anew.

aesthetic anatomy wallpaper: "Visions of the Industrial Age, 1830?914 " Amy Woodson-Boulton, 2017-07-05 Providing a comprehensive interdisciplinary assessment, and with a particular focus on expressions of tension and anxiety about modernity, this collection examines visual culture in nineteenth-century Europe as it attempted to redefine itself in the face of social

change and new technologies. Contributing scholars from the fields of history, art, literature and the history of science investigate the role of visual representation and the dominance of the image by looking at changing ideas expressed in representations of science, technology, politics, and culture in advertising, art, periodicals, and novels. They investigate how, during the period, new emphasis was placed on the visual with emerging forms of mass communication?photography, lithography, newspapers, advertising, and cinema?while older forms as varied as poetry, the novel, painting, interior decoration, and architecture became transformed. The volume includes investigations into new innovations and scientific development such as the steam engine, transportation and engineering, the microscope, spirit photography, and the orrery, as well as how this new technology is reproduced in illustrated periodicals. The essays also look at more traditional forms of creative expression to show that the same concerns and anxieties about science, technology and the changing perceptions of the natural world can be seen in the art of Armand Guillaumin, Auguste Rodin, Gustave Caillebotte, and Camille Pissarro, in colonial nineteenth-century novels, in design manuals, in museums, and in the decorations of domestic interior spaces. *Visions of the Industrial Age, 1830-1914* offers a thorough exploration of both the nature of modernity, and the nature of the visual.

The volume begins with the historical contexts of the digital arts, discusses contemporary forms, and concludes with current and future trends in distribution and archival processes. Considering the imperative of artists to adopt new technologies, the chapters of the book progressively present a study of the impact of the digital on art, as well as the exhibition, distribution and archiving of artworks. Alongside case studies that illustrate contemporary research in the fields of digital arts, reflections and questions provide opportunities for readers to explore relevant terms, theories and examples. Consistent with the other volumes in the New Media series, a bullet-point summary and a further reading section enhance the introductory focus of each chapter.

aesthetic anatomy wallpaper: *Ornament, the Novel, and the Victorian Real* Irena Yamboliev, 2025-07-07 All real art, wrote William Morris, is ornamental. If Morris is right, then ornament is not, as some would have it, a triviality, a sign of want, or a crime. Instead, *Ornament, the Novel, and the Victorian Real* argues for the many and varied ways in which the novel is indebted to ornament. Victorians and Victorianist scholars have compared the novel to fine arts such as Dutch genre painting or to photography, emphasizing these visual forms' investment in gritty particularity and exhaustive detailing of appearance. But this story loses sight of a key fact that this book recovers: ornament represents a distinct, describable Victorian method of realism, a method for boiling down essentials and making palpable the invisible, fundamental laws that govern form in nature. This book grounds itself historically in Victorian theories and practices of decoration developed in the middle of the nineteenth century, a moment when Victorian designers overhauled the reigning principles of decorative art, and shows the rise of the newly developed theory of ornament to have explanatory power for contemporary novelistic practice too. The compositional principles in ornament—far from

trivial, extraneous, or deceptive—furnish a new theory of form, a new concept of the real, and a new method for reading novelistic prose. Ornament is at work churning away at the heart of the Victorian novel. Wallpaper patterns, hinge-work, stained glass: these visual forms articulate principles of form such contrast, symmetry, flatness, and stylization. And novelists turn these design principles into literary principles, importing them into their narratives as syntax, word by word and phrase by phrase. This book proceeds by way of very close readings that focus on the scale of the sentence and analyzes the rhythm, meter, and repetition of prose. This method allows an appreciation of how, in the hands of George Eliot, Thomas Hardy, A. C. Swinburne, Oscar Wilde, and D. H. Lawrence, ornamental prose opens up representational possibilities not otherwise available. Ornament allows novelists to render the patterning of human minds, the dynamics of relationship, and the intense realities of the more-than-human world.

This edition combines the two volumes into one; it's paperbound (flexi-cover--the paper has a plastic coating), smaller (8x10, and affordable for art book buyers with shallower pockets--none of whom should pass it by. The scope is encyclopedic: half the work (originally the first volume) is devoted to painting; the other half to sculpture, new media, and photography. Chapters are arranged thematically, and each page displays several examples (in color) of work under discussion. The final section, a lexicon of artists, includes a small bandw photo of each artist, as well as biographical information and details of work, writings, and exhibitions. Ruhrberg and the three other authors are veteran art historians, curators, and writers, as is editor Walther. c. Book News Inc.

aesthetic anatomy wallpaper: *The Literary Life of Things* Babette Bärbel Tischleder, 2014-02-13 Whether in the street or the microcosm of the home, the life of things conjoins human subjects and inanimate objects. This material culture has long played a vital role in the American literary imagination, yet scholars in literary and cultural studies have only recently (re)discovered the object world as a subject of critical inquiry. Engaging a great range of American literature--from Harriet Beecher Stowe and Edith Wharton to Vladimir Nabokov and Jonathan Franzen--*The Literary Life of Things* illuminates scenes of animation that disclose the aesthetic, affective, and ethical dimensions of our entanglement with the material world.

aesthetic anatomy wallpaper: Choreomusicology Samuel N. Dorf, Helen Julia Minors, 2025-05-07 *Choreomusicology: Dialogues in Music and Dance* is a distinguished collection of chapters by leading scholars presenting research that redefines and rethinks the question of what dance and music are, together and apart, and which promotes new ideas and voices in the discipline. Focusing on matters historical, critical, and conceptual, and defining dance-music interactions from the era of aristocratic court dance to the present, the book covers a wide range of topics, including dance and music performance practice, queer studies, colonialism and exoticism, disability studies, the "reparative" humanities, and film. The volume is organized into two sections: Part 1 examines theoretical and conceptual issues, including theories of embodiment, musicality, and dance aesthetics, with examples including contemporary ballet, the role of the conductor, and even fountains in Las Vegas. In Part 2, contributors consider choreomusicology as a historical discipline and tackle the problem of musical and choreographic reconstruction, from medieval dance to reimagining lost music in early experiment in dance film, as well as choreomusical analyses of twentieth-century works. Capturing the breadth of studies and approaches that are encompassed in choreomusicology, this book will be of interest to students and scholars in the fields of dance and media studies, musicology, and ethnomusicology, as well as appealing to dancers, choreographers, musicians, and composers looking for new approaches to thinking about music and dance.

aesthetic anatomy wallpaper: *Becoming Earth* Ferris Jabr, 2025-04-01 A vivid account of a major shift in how we understand Earth, from an exceptionally talented new voice. Earth is not simply an inanimate planet on which life evolved, but rather a planet that came to life. "Glorious . . . full of achingly beautiful passages, mind-bending conceptual twists, and wonderful characters. Though once ridiculed by some scientists, the idea of Earth as a vast interconnected living system has gained acceptance in recent decades. We, and all living things, are more than inhabitants of Earth—we are Earth, an outgrowth of its structure and an engine of its evolution. Life and its environment have coevolved for billions of years, transforming a lump of orbiting rock into a cosmic oasis—a planet that breathes, metabolizes, and regulates its climate. Acclaimed science writer Ferris Jabr reveals a radical new vision of Earth where lush forests spew water, pollen, and bacteria to summon rain; giant animals engineer the very landscapes they roam; microbes chew rock to shape continents; and microscopic plankton, some as glittering as carved jewels, remake the air and sea. Humans are one of the most extreme examples of life transforming Earth. Through fossil fuel consumption, agriculture, and pollution, we have altered more layers of the planet in less time than any other species, pushing Earth into a crisis. But we are also uniquely able to understand and protect the planet's wondrous ecology and self-stabilizing processes. Jabr introduces us to a diverse cast of fascinating people who have devoted themselves to this vital work. *Becoming Earth* is an exhilarating journey through the hidden workings of our planetary symphony—its players, its instruments, and the music of life that emerges—and an invitation to reexamine our place in it. How well we play our part will determine what kind of Earth our descendants inherit for millennia to come.
