anatomy mackenzie: Curating the Future Jennifer Newell, Libby Robin, Kirsten Wehner, 2016-08-12 Curating the Future: Museums, Communities and Climate Change explores the way museums tackle the broad global issue of climate change. It explores the power of real objects and collections to stir hearts and minds, to engage communities affected by change. Museums work through exhibitions, events, and specific collection projects to reach different communities in

different ways. The book emphasises the moral responsibilities of museums to address climate change, not just by communicating science but also by enabling people already affected by changes to find their own ways of living with global warming. There are museums of natural history, of art and of social history. The focus of this book is the museum communities, like those in the Pacific, who have to find new ways to express their culture in a new place. The book considers how collections in museums might help future generations stay in touch with their culture, even where they have left their place. It asks what should the people of the present be collecting for museums in a climate-changed future? The book is rich with practical museum experience and detailed projects, as well as critical and philosophical analyses about where a museum can intervene to speak to this great conundrum of our times. *Curating the Future* is essential reading for all those working in museums and grappling with how to talk about climate change. It also has academic applications in courses of museology and museum studies, cultural studies, heritage studies, digital humanities, design, anthropology, and environmental humanities.

anatomy mackenzie: The Schoolgirl Strangler Katherine Kovacic, 2021-01-05 November, 1930.

One sunny Saturday afternoon, 12-year-old Mena Griffiths was playing in the park when she was lured away by an unknown man. Hours later, her strangled body was found, mouth gagged and hands crossed over her chest, in an abandoned house. Only months later, another girl was murdered; the similarities between the cases undeniable. Crime in Melbourne had taken a shocking new turn: this was the work of a serial killer, a homicidal maniac. Despite their best efforts, police had no experience dealing with this kind of criminal. What followed was years of bungled investigations, falsely accused men - and the tragic deaths of two more girls - before the murderer was finally caught and brought to justice. With all the pace of a thriller, Katherine Kovacic recounts this extraordinary, chilling true story - of failed police enquiries, a killer with a Jekyll and Hyde personality, and the families shattered when four innocent lives were cruelly taken.
