net anatomy osu: Monster Trek Joe Gisondi, 2016 Bigfoot sightings have been reported in every state except Hawaii. Interest in this creature, which many believe to be as mythical as a leprechaun, is as strong today as ever, with the wildly popular show Finding Bigfoot persisting on the Animal Planet network and references to bigfoot appearing throughout popular culture. What is it about bigfoot that causes some people to devote a chunk of their lives to finding one? In Monster Trek, Joe Gisondi brings to life the celebrities in bigfoot culture: people such as Matt MoneyMaker, Jeff Meldrum, and Cliff Barackman, who explore remote wooded areas of the country for weeks at a time and spend thousands of dollars on infrared imagers, cameras, and high-end camping equipment. Pursuing the answer to why these seekers of bigfoot do what they do, Gisondi brings to the reader their most interesting--and in many cases, harrowing--expeditions. Gisondi travels to eight locations across the country, trekking into swamps, mountains, state parks, and remote woods with people in search of bigfoot as well as fame, fortune, adventure, and shared camaraderie. Many of the people who look for bigfoot, however, go counter to stereotypes and include teachers, engineers, and bankers. Some are private and guarded about their explorations, seeking solitude during a deeply personal quest. While there are those who might arguably be labeled crazy, Gisondi discovers that the bigfoot research network is far bigger and more diverse than he ever imagined.

net anatomy osu: Make / Believe John Hartley, 2025-01-23 This book illustrates that mediated popular culture and science-based knowledge systems, entangled and compromised as both have become, are still a robust crucible for system change for the future when they combine forces. Planetary crises require responses from everyone. This means that collective action is not simply a scientific or political problem. It is a problem of culture and media. But modern politics, journalism, and science were not designed for global climate action. They've divided humans into competitive and often hostile 'we' and 'they' groups. Identity, news, and knowledge are all weaponized. Culture makes groups, groups make knowledge, and knowledge makes enemies. What can be done to prevent global conflict and the drift to war? Make/Believe turns to popular culture and social media to argue for an alternative storyline. While the Great Powers are making new enemies, emergent 'classes' - led by children - are using planetary connectivity to make new worlds. A digital planet generates new kinds of strategic stories for pan-human action, based on difference, intersectionality, and cooperation for a sustainable Earth system. Make/Believe shows how alternatives to the 'Great Game' of global contestation are gathering strength in unlikely places, among women, children, lifestyle, and pop culture. Popular digital media literacy is now a prerequisite for the remediation of the planet.
