ambit energy business: *Be the Business* Martha Heller, 2016-10-04 Remember the '70s? Way back then, IT was a mainframe that sat in some room and only a few people had a key. Flash forward a decade, and IT was a limited set of systems irrelevant to the vast majority of employees and customers. But today, all of the sudden, technology belongs to everyone. Because of the suddenness of this revolution in technology adoption, most IT organizations have not had enough time to evolve into a comfortable integration with the rest of the company. This lack of comfortable integration has led to confusion over who is truly accountable for the return on technology investments, how much influence IT leaders should have over a company's business strategy, and whether CEOs need to hire Chief Digital Officers onto their senior leadership teams. Through interviews with dozens of CIOs, Heller has created a snapshot of what CIOs are doing to lead IT in a climate where technology belongs to everyone. She addresses how CIOs are changing their operating models, their approaches to talent development, and their assessment of the new IT provider marketplace. Most importantly, Heller defines the top ten skills and behaviors that CIOs will need to develop if they are going to be successful in an ever changing landscape. As a master storyteller, Heller incorporates philosophy, humor, and pragmatic advice into a book that both informs and entertains.

ambit energy business: *The Price is Wrong* Brett Christophers, 2025-06-24 Standard theories of the causes of climate breakdown will not survive this book. Readers will be all the wiser. —Andreas Malm, author of *How to Blow Up a Pipeline* Why the market will never solve the climate crisis What if our understanding of capitalism and climate is back to front? What if the problem is not that transitioning to renewables is too expensive, but that saving the planet is not sufficiently profitable? This is Brett Christophers' claim. The global economy is moving too slowly toward sustainability because the return on green investment is too low. Today's consensus is that the key to curbing climate change is to produce green electricity and electrify everything possible. The main economic barrier in that project has seemingly been removed. But while prices of solar and wind power have tumbled, the golden era of renewables has yet to materialize. The problem is that investment is driven by profit, not price, and operating solar and wind farms remains a marginal business, dependent everywhere on the state's financial support. We cannot expect markets and the private sector to solve the climate crisis while the profits that are their lifeblood remain unappetizing. But there is an alternative to providing surrogate green profits through subsidies: to

take energy out of the private sector's hands. An essential intervention, *The Price Is Wrong* is as politically far-reaching as it is factually illuminating.

ambit energy business: Demonetization Economic Slowdown and Energy Future M.R. Biju, M.R.B. Anantha Padmanabha, 2021-01-01 Demonetisation is an act of cancelling the legal tender status of a currency unit in circulation. It can also be described as an act of taking away the legal tender rights of any currency. Further, it is the process of ceasing a unit of money of its status as legal tender. It is a necessary condition for changing the old currency with the new units of money. Anticipating positive changes on the liquidity structure as a whole, nations often adopt demonetisation policy as a measure to counterbalance the current economic situation. Countries across the globe have used demonetisation at some or the other point to control situations such as inflation and efforts to boost the economy. Keeping this in background this volume attempts to address the issues pertaining to various aspects of the Indian Economy, viz. impact of demonetisation, economic slowdown and changes in employment pattern, changing structure of manufacturing sector, socioeconomic implications of large scale farmer's suicide, impact of special economic zones, land acquisition, smart cities, women empowerment, social capital, multiculturalism, environmental justice discourses, environmental determinism, entrepreneurial development, socio-economic vulnerability and citizen centric services. The research papers and articles are contributed by senior academics and development activists. In their submissions they tried to expose the existing problems in these core areas and present valuable suggestions to revamp Indian Economy. The views and opinions expressed by them are of immense value for researchers, academics and administrators for framing policies and strategies on demonetisation and economic reforms.
