att internet service for business: E-Business Service Level Agreements Andrew Hiles, 2002-06-30 Your customers don't care whether it is you, your ISP, ASP, or other outsourced provider who screws up - they just know they can't do business with you when they want to. All that matters is that your e-business is failing to deliver - and that you need to hold someone accountable.

Meaningful Service Level Agreements (SLAs) are unambiguous, comprehensive, and enforceable. SLAs commit suppliers to a defined quality of service: failure to meet explicit service levels can result in penalties or even legal action. Spectacular losses often follow e-business outages, particularly when SLAs are not in force. The biggest hit is not necessarily loss of income or profit, but impact on stock values - especially when markets are skittish. Some losses have exceeded \$40 million with stock values falling by 26%. This new book offers the keys to effective SLAs with Internet Service Providers (ISPs) and Application Service Providers (ASPs), which can go a long way toward averting catastrophic losses as well as day-to-day headaches.

att internet service for business: Optical Fiber Telecommunications VIB Loukas Paraschis, 2013-05-11 The increasingly important role of Internet-based, "cloud" service delivery is motivating the evolution of the Internet to a flatter hierarchy of more densely interconnecting networks that shall cost-effectively scale to Zettabytes of bandwidth with improved operational efficiency, under increased traffic variability, and forecast unpredictability. This chapter reviews the implications of this evolution in its underlying metro regional and core transport network architectures, and evaluates the most important innovations in photonics, optical transport, routing, and traffic engineering technologies enabling it. Most notably, 1) a new generation of coherent DWDM systems with more than 2 b/s/Hz spectral efficiency is scaling the existing fiber infrastructure, albeit at a significantly higher proportion, typically more than 50%, of the total transport network cost, while 2) the convergence of IP/MPLS with flexible DWDM promises the most cost-efficient transport evolution, in open architectures that combine advancements in photonics, routing, multi-layer control-plane and management coordination, with interoperability, to improve operation, automate provisioning and restoration, and may optimize network utilization.

att internet service for business: Communications Policy in Transition Benjamin M. Compaine, Shane M. Greenstein, 2001 A collection of research reports on policy issues involving telecommunications, particularly the Internet. Until the 1980s, it was presumed that technical change in most communications services could easily be monitored from centralized state and federal agencies. This presumption was long outdated prior to the commercialization of the Internet. With the Internet, the long-forecast convergence of voice, video, and text bits became a reality. Legislation, capped by the Telecommunications Act of 1996, created new quasi-standards such as fair and reasonable for the FCC and courts to apply, leading to nonstop litigation and occasional gridlock. This book addresses some of the many telecommunications areas on which public policy makers, corporate strategists, and social activists must reach agreement. Topics include the regulation of access, Internet architecture in a commercial era, communications infrastructure development, the Digital Divide, and information policy issues such as intellectual property and the retransmission of TV programming via the Internet.
