business class copa airlines: The Airline Revolution Gordon Mills, 2016-07-15 When starting new airlines in response to government deregulation, entrepreneurs in the U.S. and Europe reduced some traditional service qualities (to reduce costs), concentrated on non-stop services between city pairs not already so connected, improved on-time performance, and offered low fares to win leisure travelers from the incumbents and to encourage more travel. In recent developments, some of the new airlines have offered optional extras (at higher fares) to attract business travelers and entered major routes alongside the legacy carriers. Within both the U.S. and Europe, deregulation removed most geographical barriers to expansion by short-haul airlines. Later, limited deregulation spread to other world regions, where many short-haul routes connect city pairs in different countries, and where governments have retained traditional two-country mechanisms restricting who may fly. To gain access to domestic routes in other countries, some new airlines are setting up affiliate companies in neighboring countries, with each company legally controlled in the country of domicile. With air travel growing strongly, especially in Asia, a common result is intense, but potentially short-lived, competition on major routes. The recent developments give clear signposts to likely mid-term outcomes, and make this an opportune time to report on the new-airline scene. The Airline Revolution will provide valuable economic analysis of this climate to students, airline professionals advancing to senior positions, public servants and others who provide advice to governments.

business class copa airlines: Airline Industry Nawal K. Taneja, 2016-06-23 Many business sectors have been, and are being, forced to compete with new competitors-disrupters of some sort—who have found new ways to create and deliver new value for customers often through the use of technology that is coupled with a new underlying production or business model, and/or a broad array of partners, including, in some cases, customers themselves. Think about the disruption created by Apple by the introduction of the iPod and iTunes, and by Netflix within the entertainment sectors using partners within the ecosystem; think of Uber that didn't build an app around the taxi business but rather built a mobility business around the app to improve customer experience. Airline Industry considers whether the airline industry is poised for disruptive innovations from inside or outside of the industry. Although airlines have a long history of continuous improvements and innovation, few of their innovations can be classified as disruptive innovations. The few disruptive innovations that did emerge were facilitated, for example by new technology (jet aircraft) and government policy (deregulation). Now there are new forces in play—customers who expect to receive products that are more personalized and experience-based throughout the entire journey, new customer interfaces (via social media), advanced information systems and analytics, financially powerful airlines based in emerging nations, and the rise of unencumbered entrepreneurs who think differently as well as platform-focused integrators.

If an airline isn't protected against these higher prices, they can devastate its finances and send it quickly into bankruptcy. This seemingly happens on a yearly basis. Thankfully for most airlines, they are able to protect themselves against higher oil and jet fuel prices, at least in the short term, by hedging using financial instruments. The challenge for airlines is to determine which financial instruments they should use, in which products they should hedge, and how far out from fuel consumption they should hedge. This book systematically explores the different financial instruments that airlines have to choose from, and in what situations they should be used. It will also present the reader with the options airlines have in terms of manipulating operational levers in response to higher fuel prices such as airfares, capacity and fleet size, once the protective benefits of hedging wear off.

business class copa airlines: The Voyage of the Vizcaína Klaus Brinkbäumer, Clemens Höges, 2007 Between 1492 and 1504, Christopher Columbus made four attempts to find the East by heading West. In the process he lost a fair number of ships; on his last journey alone he lost no fewer than four. Although Columbus also left written documentation of where his boats had gone down, no one has been able to locate even one of the wrecks. (His reports were probably inaccurate, perhaps willfully so--he was frequently less than truthful about his adventures in the New World.) In the mid-1990s, an American expatriate living in Panama--an aging surfer dude who ran a Scuba-diving outfitting shop and diving school--a Panamanian real estate agent, and an American on vacation with his son all claimed to have been the first to locate the remains of a small ship lying in fairly shallow waters in a small gulf in Panama. No one took the discovery seriously, since it had not been made by a team of established archeologists and scientists. Finally, in 2002, the authors of this book--journalists and amateur divers--decided to investigate. They organized a team of American scientists, all of them experts in carbon dating and underwater shipwrecks, who established not only that the Panama wreck was the oldest ever found in the entire Western Hemisphere--dating from around 1500--but that it was very likely the remains of one of Columbus' last ships, the Vizcaina. To be published on the 500th anniversary of Columbus' death, THE VOYAGE OF THE VIZCAINA is a riveting account of shipwreck and adventure, giving readers the story of how the wreck was found and salvaged. Working backward, Brinkbaumer and Hoges combine archaeology and history to recreate the circumstances of the fourth journey, which began in 1502 and ended in 1504. This book is unique in its extensive use of detailed findings to frame its fascinating discoveries and conclusions about exploration in the New World, as well as about the genius and shortcomings of the man known as the Admiral, and credited with the greatest discovery of all time.
