business change quotes: De Gruyter Handbook of Business Families Michael Carney, Marleen Dieleman, 2023-01-30 The management field increasingly recognizes that most firms in the world are family firms and that these entities operate differently from the non-family firms on which most of our current management theories are based. The De Gruyter Handbook of Business Families brings together work from leading academics who explore emerging research themes relevant to business families, particularly drawing in new insights from adjacent disciplines that can advance the family business field. The handbook challenges the traditional notion of the single firm-single family that has characterized most early research on family business. Recognizing that families may simultaneously own or control multiple businesses as well as substantial wealth beyond these firms in the form of financial and non-financial assets, this handbook focuses on business families rather than the narrower construct of family business. The contributions in this handbook explore the relatively neglected dynamics between individuals with family ties that shape the interaction between family and business; business families with multiple businesses; how business families adopt formal rules and processes around their joint activities; and the institutionalization of wealth and business families in society. The De Gruyter Handbook of Business Families fills a gap in the family business research literature and is an essential reference work for researchers and graduate-level students in the area of business families.

business change quotes: **Value-creation in Middle Market Private Equity** John A. Lanier, 2016-02-17 Value-creation in Middle Market Private Equity by John A. Lanier holistically examines the ecosystem relationships between middle market private equity firms and their portfolio companies. Small business is the job creating engine in the US economy, and consequently is a prime target market for private equity investment. Indeed, private equity backs over six of each 100 private sector jobs. Both the small businesses in which private equity firms invest, and the private equity firms making the investments, face inter- and intra-company fiduciary leadership challenges while implementing formulated strategy. The architecture of each private equity firm-portfolio company relationship must be uniquely crafted to capitalize on the projected return on investment that is memorialized in the investment thesis. Given the leveraged capital structure of portfolio companies, the cost of a misstep is problematic. Individual private equity professionals are typically members of multiple investment teams for the firm. Not only may each investment team have its own unique leadership style, but its diverse members have to assimilate styles for each team in which they participate relative to a specific portfolio company. Acquisitions and their subsequent integrations add exponential complexity for both private equity investment and portfolio company leadership teams; indeed, cultural integration ranks among the most chronic acquisition obstacles. Accordingly, the stakeholders of private equity transactions do well to embrace leadership best practices in applying value-creation toolbox best practices. The perspectives of both the private equity investment team and the portfolio company leadership team are within the scope of these chapters.
