business class on fiji airways: Airline Microeconomics Tony Webber, 2022-07-25 This book presents readers with a technical tool-kit to understand the economics of airlines. It starts by covering the key language and glossary of the air travel business, which is necessary for graduates or first-time employees in aviation to understand the content of conversations, meetings, presentations and internal aviation communications. It then breaks down the complexity of the demand side of the air travel business. The book then analyses revenue over two distinct time horizons, specifically the short and medium runs, recognising the fact that airlines operate to a fixed number of seats over a short horizon because of the way that they schedule services in advance of departure. By combining revenue and costs, the book then analyses airline profit, with a focus on the short run and medium run decision variables that maximise airline profit. The remainder of the book analyses various important topics in air transport economics, including competition in airline markets, key rules, regulations and taxes that affect the return on capital in aviation, the way that airlines form relationships, and the economics of the market for oil and jet fuel, among others.

business class on fiji airways: Air Transport in the Asia Pacific Assoc Prof David T Duval, 2014-11-28 Air transport in the Asia Pacific has undergone significant transformation in the last three decades. What was once a region in the shadow of larger and more prosperous continents such as North America and Europe is now at the forefront of expansion in commercial air-service networks, frequency and capacity, and the overall growth in the contribution of air transport to economies on regional and, in many cases, individual country levels. Despite this, it represents an area that is generally under-represented in the commercial air-transport academic literature. Air Transport in the Asia Pacific seeks to fill this gap. Against this context, the aim of the volume is to offer a contemporary snapshot of current academic research into commercial air transport in the Asia Pacific. While one volume cannot realistically address the complete range of identifiable issues, this book provides timely, specific and research-based studies authored by leading academics and practitioners.
