countries. It widens the handbook's scope by including ecological design; consideration of cultural dimensions of the use and conservation of urban nature; the roles of government and civil society; and the continuing issues of equity and fairness in access to urban greenspaces. New features include an emphasis on the biophilic design of homes and workplaces, demonstrating the value of nature, in order to counter the still prevalent attitude among many developers that nature is a constraint rather than a value. The volume explores great practical achievements that have occurred since the first edition, with many governments increasingly recognizing and legislating on urban nature and green infrastructure matters, since cities play a major role in adapting to change, particularly to climate crisis. New topics such as the ecological role of light at night and human microbiota in the urban ecosystem are introduced. Additional attention is given to food production in cities, particularly the multiple roles of urban agriculture and household gardens in different contexts from wealthy communities to the poorest informal settlements in deprived communities. The emphasis is on demonstrating what can be achieved, and what is already being done. The book aims to help scholars and graduate students by providing an invaluable and up-to-date guide to current urban ecological thinking across the range of disciplines, such as geography, ecology, environmental science/studies, planning, and urban studies, that converge in the study of towns and cities and urban design and living. It will also assist practitioners and civil society members in discovering the ways different specialists and thinkers approach urban nature.

**business parks: Resource Efficiency of Processing Plants** Stefan Krämer, Sebastian Engell, 2018-05-07 This monograph provides foundations, methods, guidelines and examples for monitoring and improving resource efficiency during the operation of processing plants and for improving their design. The measures taken to improve their energy and resource efficiency are strongly influenced by regulations and standards which are covered in Part I of this book. Without changing the actual processing equipment, the way how the processes are operated can have a strong influence on the resource efficiency of the plants and this potential can be exploited with much smaller investments than needed for the introduction of new process technologies. This aspect is the focus of Part II. In Part III we discuss physical changes of the process technology such as heat integration, synthesis and realization of optimal processes, and industrial symbiosis. The last part deals with the people that are needed to make these changes possible and discusses the path towards a resource efficiency culture. Written with industrial solutions in mind, this text will benefit practitioners as well as the academic community.

**business parks: Modeling Cities and Regions as Complex Systems** Roger White, Guy Engelen, Inge Uljee, 2024-06-11 The theory and practice of modeling cities and regions as complex, self-organizing systems, presenting widely used cellular automata-based models, theoretical discussions, and applications. Cities and regions grow (or occasionally decline), and continuously transform themselves as they do so. This book describes the theory and practice of modeling the spatial dynamics of urban growth and transformation. As cities are complex, adaptive,

self-organizing systems, the most appropriate modeling framework is one based on the theory of self-organizing systems—an approach already used in such fields as physics and ecology. The book presents a series of models, most of them developed using cellular automata (CA), which are inherently spatial and computationally efficient. It also provides discussions of the theoretical, methodological, and philosophical issues that arise from the models. A case study illustrates the use of these models in urban and regional planning. Finally, the book presents a new, dynamic theory of urban spatial structure that emerges from the models and their applications. The models are primarily land use models, but the more advanced ones also show the dynamics of population and economic activities, and are integrated with models in other domains such as economics, demography, and transportation. The result is a rich and realistic representation of the spatial dynamics of a variety of urban phenomena. The book is unique in its coverage of both the general issues associated with complex self-organizing systems and the specifics of designing and implementing models of such systems.

**business parks: Handbook on the Economics of Philanthropy, Reciprocity and Social Enterprise** Stefano Zamagni, Luigino Bruni, 2013-01-01 The recent era of economic turbulence has generated a growing enthusiasm for an increase in new and original economic insights based around the concepts of reciprocity and social enterprise. This stimulating and thought-provoking Handbook not only encourages and supports this growth, but also emphasises and expands upon new topics and issues within the economics discourse. Original contributions from key international experts acknowledge and illustrate that markets and firms can be civilizing forces when and if they are understood as expressions of cooperation and civil virtues. They provide an illuminating discourse on a wide range of topics including reciprocity, gifts and the civil economy, which are especially relevant in times of crisis for financial capitalism. The Handbook questions the current phase of the market economy that arises from a state of anthropological pessimism. Such anthropological cynicism is one of the foundations of the contemporary economic system that is challenged by the contributors. This highly original and interdisciplinary Handbook will provide a fascinating read for academics, researchers and students across a wide range of fields including economics, public sector economics, public policy and social policy.

**business parks: Creative Approaches to Planning and Local Development** Abdelillah Hamdouch, Torill Nyseth, Christophe Demaziere, Anniken Førde, José Serrano, Nils Aarsæther, 2016-07-15 This book project highlights creative approaches to planning and local development. The dynamic complexity, diversity and fluidity which characterize contemporary society represent challenges for planning and development endeavours. While research and policy work has extensively focused on large cities and on metropolitan regions, there has been relatively little work on 'smaller places'. This book shows that if these new challenges affect all places and regions, small

and medium-sized towns (SMSTs) are suffering many specific problems that call imperatively for the design and implementation of very imaginative, creative approaches to planning and local development. What could enhance creativity in local development and planning? Is it possible to talk about creative capacity building at the level of a town that might release imaginative and innovative activities? Under what local and non-local conditions is creativity being initiated and flourishing? What are the major obstacles and in what way can these be contained in order to safeguard pockets of creative action? Interdisciplinary and with case studies from France, Norway and other European countries, this volume presents a wide range of approaches and territorial contexts of small cities and towns in which spatial dynamics and the consequences of the city-region for urban planning theory and practice in Europe are highlighted, with a special focus on the challenges for - and understanding of - planning and development of SMSTs. It provides a significant body of critical, comparative and contextual perspectives on the quest for urban sustainability and resilience in SMSTs, therefore emphasizing collaborative and potentially innovative approaches that can be detected, but also the shortcomings, pitfalls and 'traps' that can lie behind the approaches aimed at concerting ecological, economic, and socio-cultural concerns, and the discourses promoting them.
