business plan for a dairy farm: Applying HACCP-based Quality Risk Management on dairy farms J.P.T.M. Noordhuizen, J. Cannas da Silva, J.S.C. Boersema, A. Vieira, 2023-08-28 Quality is a keyword in animal production. Next to product quality, process quality has also become relevant for dairy farmers. Issues like food safety, public health, animal health and welfare are determined by the conditions of the production process. To address these, the EU has issued the General Food Law (178-2002) and the Hygiene directives (EC 852/853/854-2004) dealing with the forenamed domains with the aim to protect consumers. The suggestion was also made by the EU that farmers apply a HACCP-like plan to meet these new quality demands. Key issues are structure, organisation, planning, formalisation and demonstrability, which can also be found in the HACCP concept. This book addresses Quality Risk Management through applying the HACCP-like concept. First, the assessment of strong and weak points on a dairy farm are dealt with, which is useful for farm inspection and herd health programmes. Then, the 12-steps for developing a HACCP plan are followed through the various chapters. Many examples and elaborations are given. An example farm, FX, is introduced to show how the different elements may look in reality. At the end of the book

characteristics of entrepreneur-like dairy farmers are given and compared to strong and weak points of cattle practitioners. Practitioners may conclude how to better serve this type of farmer.

Communication plays a paramount role. Finally, several general issues are addressed: economics, integrating classical herd health with quality risk management programmes. The aim of this book is to give practical guidelines and examples for dairy farmers, cattle practitioners and extension people, who desire to jointly develop and implement a HACCP-based quality risk management programme. 'This book is well written with many practical flow charts and Good Practice advice. I would recommend it to any veterinarian involved in producing risk management programs or Standard Operating Procedure type documents for dairy farms. The chapters on good communication and marketing would be useful for most veterinarians.' David S. Beggs, book review editor 'The Australian Cattle Veterinarian' Volume 50, p. 34-35, March '09

business plan for a dairy farm: *African Perspectives on South-South Migration* Meron Zeleke, Lahra Smith, 2024-04-01 This book investigates the diverse and dynamic forms of migration within Africa. Centring themes of agency, resource flows, and transnational networks, the book examines the enduring appeal of the Global South as a place of origin, transit, and destination. Popular media, government pronouncements, and much of the global research discourse continue to be oriented towards migration from the Global South to the Global North, despite the fact that the vast majority of migration is South-South. This book moves beyond these mischaracterisations and instead distinctly focuses on the agency of African migrants and the creative strategies they employ while planning their routes within and across the African continent. Case studies explore the flow of resources such as people, money, skills, and knowledge throughout the continent, while also casting a light on the lived experiences of migrants as they negotiate their sometimes precarious and vulnerable positions. Underpinned by intensive empirical studies, this book challenges prevailing narratives and provides a new way of thinking about South-South Migration. Composed by a majority of scholars from the Global South, the book will be crucial reading for researchers, students, and policy makers with a focus on South-South Migration, Migration and Inequalities, Migration and Development, and Refugee and Humanitarian Studies.
