business tap air portugal: Introduction to Air Law Pablo Mendes de Leon, 2022-08-11 The world of aviation has moved on rapidly since the appearance of the ninth edition of this pre-eminent

resource five years ago. Those developments pertain to market access and market behaviour by air carriers, including competition, new perceptions of safety and security, among others, in relation to transparency of accident investigation and cybersecurity, case law in the area of airline liability, with new cases from the United States, product liability and insurance, the United Kingdom, and elsewhere, the growing importance of environmental concerns, the rights and obligations of passengers, also in the context of 'unruly' passengers, and innovative methods for financing aircraft. Special attention has been paid in this edition to regional integration movements, especially in Europe, affecting the mentioned subjects. The book's extensive references to other sources in the field have been expanded and updated by the author and experts in specialised areas. The present edition addresses the following topics: the regulatory framework governing the operation of air services, including the principle of sovereignty in national airspace; the distinction between State and civil aircraft; dispute settlement in international civil aviation; economic regulation of international air transport services, including the establishment of air services agreements; inter-airline cooperation in the context of competition law regimes; liability of the various service providers, in particular airlines, and related insurance coverage; the promotion of safety standards; criminal acts affecting the safety of aviation; the role of international and regional organisations with particular reference to that of the European Union; liability of the aircraft manufacturer for equipment; and financial and security interests in mobile equipment. The many practitioners, officials, business people, and academics with a professional interest in aviation law will appreciate this new edition as one of the fundamental works in the field, and newcomers will discover an incomparable resource. This eleventh edition is ready to be of unmatched service to any practising member of the air law community anywhere in the world.

business tap air portugal: A Europe of the Air? Martin Staniland, 2008-06-09 This definitive book offers the first full study of the development of the European Union's air-transport policy. Crucial to both globalization and regional integration, commercial aviation, along with other transport industries, provides the logistics for business activities, political life, and contact between cultures. Paradoxically, however, the airline industry was one of the last to be liberalized in the process of European integration, and the creation of a single market in air transport was attended by sharp political disputes, unreconstructed nationalism, and persistent foot-dragging. Exploring the long struggle to create a Europe of the air through both regulatory change and airline strategizing, Martin Staniland examines the political bargains that have shaped a highly fragmented industry and its regulation. He argues that, rather than focusing on directives and regulations issuing from Brussels, students of integration should examine the ways in which the contentious interaction between leaders of an industry and relevant politicians and officials creates distinctive market orders. Such market orders enable firms to minimize the risks inherent in business, while allowing regulators to pursue the mandates of their organizations and to realize their notions of public interest. Economic integration is therefore an often-painful struggle to create a market order defined both by regulatory jurisdiction and by competition among firms. An invaluable case-study in industrial policy, this book will be essential reading for students of aviation, as well as for scholars interested in regulatory change and European integration.

business tap air portugal: Entrepreneurial Strategy Lucio Cassia, Michael Fattore, Stefano Paleari, 2006-01-01 Entrepreneurial Strategy aims to revive the debate on the role of entrepreneurship in the context of mature business. The authors contend that mature and declining industries are increasingly dominated by the negative pressure of external factors but they are also embedded with a potential renewed role for entrepreneurship because the industry forces as a whole tend to break up, leaving space for strategic business innovation.

business tap air portugal: Sustainable Marketing Practices in the Aviation Industry Bakır, Mahmut, 2024-12-13 The aviation industry plays a vital role in global mobility but faces mounting pressure to address its environmental impact and meet sustainability goals. business tap air portugal: Competition Law of the European Union Van Bael & Bellis, 2021-03-01 This new Sixth Edition of a major work by the well-known competition law team at Van Bael & Bellis in Brussels brings the book up to date to take account of the many developments in the case law and relevant legislation that have occurred since the Fifth Edition in 2010. The authors have also taken the opportunity to write a much-extended chapter on private enforcement and a dedicated section on competition law in the pharmaceutical sector. As one would expect, the new edition continues to meet the challenge for businesses and their counsel, providing a thoroughly practical guide to the application of the EU competition rules. The critical commentary cuts through the theoretical underpinnings of EU competition law to expose its actual impact on business. In this comprehensive new edition, the authors examine such notable developments as the following: important rulings concerning the concept of a restriction by object under Article 101; the extensive case law in the field of cartels, including in relation to cartel facilitation and price signalling; important Article 102 rulings concerning pricing and exclusivity, including the Post Danmark and Intel judgments, as well as standard essential patents; the current block exemption and guidelines applicable to vertical agreements, including those applicable to the motor vehicle sector; developments concerning online distribution, including the Pierre Fabre and Coty rulings; the current guidelines and block exemptions in the field of horizontal cooperation, including the treatment of information exchange; the evolution of EU merger control, including court defeats suffered by the Commission and the case law on procedural infringements; the burgeoning case law related to pharmaceuticals, including concerning reverse payment settlements; the current technology transfer guidelines and block exemption; procedural developments, including in relation to the right to privacy, access to file, parental liability, fining methodology, inability to pay and hybrid settlements; the implementation of the Damages Directive and the first interpretative rulings. As a comprehensive, up-to-date and above all practical analysis of the EU competition rules as developed by the Commission and EU Courts, this authoritative new edition of a classic work stands alone. Like its predecessors, it will be of immeasurable value to both business persons and their legal advisers.
