california business roundtable: The Flickering Mind Todd Oppenheimer, 2004-12-07 The Flickering Mind, by National Magazine Award winner Todd Oppenheimer, is a landmark account of the failure of technology to improve our schools and a call for renewed emphasis on what really works. American education faces an unusual moment of crisis. For decades, our schools have been beaten down by a series of curriculum fads, empty crusades for reform, and stingy funding. Now education and political leaders have offered their biggest and most expensive promise ever—the miracle of computers and the Internet—at a cost of approximately \$70 billion just during the decade of the 1990s. Computer technology has become so prevalent that it is transforming nearly every corner of the academic world, from our efforts to close the gap between rich and poor, to our hopes for school reform, to our basic methods of developing the human imagination. Technology is also recasting the relationships that schools strike with the business community, changing public beliefs about the demands of tomorrow's working world, and reframing the nation's systems for researching, testing, and evaluating achievement. All this change has led to a culture of the flickering mind, and a generation teetering between two possible futures. In one, youngsters have a chance to become confident masters of the tools of their day, to better address the problems of tomorrow. Alternatively, they can become victims of commercial novelties and narrow measures of ability, underscored by misplaced faith in standardized testing. At this point, America's students can't even make a fair choice. They are an increasingly distracted lot. Their ability to reason, to listen, to feel empathy, is quite literally flickering. Computers and their attendant technologies did not cause all these problems, but they are quietly accelerating them. In this authoritative and impassioned account of the state of education in America, Todd Oppenheimer shows why it does not have to be this way. Oppenheimer visited dozens of schools nationwide—public and private, urban and rural—to present the compelling tales that frame this book. He consulted with experts, read volumes of studies, and came to strong and persuasive conclusions: that the essentials of learning have been gradually forgotten and that they matter much more than the novelties of technology. He argues that every time we computerize a science class or shut down a music program to pay for new hardware, we lose sight of what our priority should be: "enlightened basics." Broad in scope and investigative in treatment, *The Flickering Mind* will not only contribute to a vital public conversation about what our schools can and should be—it will define the debate.

california business roundtable: *Charter Schools* J. Powers, 2009-06-08 This book begins with the claims of policymakers and explores charter schools at each stage of the policymaking process, from legislation to implementation. Powers carefully and thoroughly examines how features of schools' policy contexts shape the ways that charter school reform unfolds at schools, providing a nuanced portrait of the schools participating in this much discussed and little understood reform movement. While policymakers are often prone to making sweeping claims about the efficacy of charter schools, in practice charter school reform is much more complex. By drawing on an extensive and compelling range of data, Powers assesses the validity of policymakers claims.

california business roundtable: *An Education in Politics* Jesse H. Rhodes, 2012-04-21 Since the early 1990s, the federal role in education—exemplified by the controversial No Child Left Behind Act (NCLB)—has expanded dramatically. Yet states and localities have retained a central role in education policy, leading to a growing struggle for control over the direction of the nation's schools. In *An Education in Politics*, Jesse H. Rhodes explains the uneven development of federal involvement in education. While supporters of expanded federal involvement enjoyed some success in bringing new ideas to the federal policy agenda, Rhodes argues, they also encountered stiff resistance from proponents of local control. Built atop existing decentralized policies, new federal reforms raised difficult questions about which level of government bore ultimate responsibility for improving schools. Rhodes's argument focuses on the role played by civil rights activists, business leaders, and education experts in promoting the reforms that would be enacted with federal policies such as NCLB. It also underscores the constraints on federal involvement imposed by existing education policies, hostile interest groups, and, above all, the nation's federal system. Indeed, the federal system, which left specific policy formation and implementation to the states and localities, repeatedly frustrated efforts to effect changes: national reforms lost their force as policies passed through iterations at the state, county, and municipal levels. Ironically, state and local resistance only encouraged civil rights activists, business leaders, and their political allies to advocate even more stringent reforms that imposed heavier burdens on state and local governments. Through it all, the nation's education system made only incremental steps toward the goal of providing a quality education for every child.

california business roundtable: Intellectual Property and Genetically Modified Organisms Charles Lawson, Berris Charnley, 2016-03-09 Taking a global viewpoint, this volume addresses issues arising from recent developments in the enduring and topical debates over Genetically Modified Organisms (GMOs) and their relationship to Intellectual Property (IP). The work examines changing responses to the growing acceptance and prevalence of GMOs. Drawing together perspectives from several of the leading international scholars in this area, the contributions seek to break away from analysis of safety and regulation and examine the diversity of ways the law and GMOs have become entangled. This collection presents the start of a much broader engagement with GMOs and law. As GMO technology becomes increasingly more complex and embedded in our lives, this volume will be a useful resource in leading further discussion and debate about GMOs in academia, in government and among those working on future policy.

california business roundtable: *California* Peter Schrag, 2007-12-05 Peter Schrag takes on the big issues immigration, globalization, and the impact of California's politics on its quality of life in this dynamic account of the Golden State's struggle to recapture the American dream. In the past half-century, California has been both model and anti-model for the nation and often the world, first for its high level of government and public services schools, universities, highways and latterly for its dysfunctional government, deteriorating services, and sometimes regressive public policies. California explains how many current solutions exacerbate the very problems they're supposed to

solve and analyzes a variety of possible state and federal policy alternatives to restore government accountability and a vital democracy to the nation's most populous state and the world's fifth-largest economy.

california business roundtable: Small Property Versus Big Government Clarence Y. H. Lo, 1995-01-01 Tax reformers, take note. Clarence Lo's investigation of California's Proposition 13 and other tax reduction bills is both a tribute and a warning to people who get mad as hell and try to do something about being pushed around by government. Homeowners in California, faced with impossible property tax bills in the 1970s, got mad and pushed back, starting an avalanche that swept tax limitation measures into state after state. What we learn is that, although the property tax was slashed, two-thirds of the benefits went to business owners rather than homeowners. How did a crusade launched by homeowners seeking tax relief end up as a pro-business, supply-side political program? To trace the transformation, Lo uses the firsthand recollections of 120 activists in the movement, going back to the 1950s. He shows how their protests were ignored, until a suburban alliance of upper-middle-class property owners and business owners took charge. It was the program of that latter group, not the plight of the moderate-income homeowner, which inspired tax revolts across the nation and shaped the economic policies of the Reagan administration. california business roundtable: Roadmap to Restructuring David T. Conley, 1993 Designed as a guide for practitioners, this book draws on over 600 sources to discuss school restructuring definitions, trends, and issues; achievements of a few select schools; and implementation techniques and strategies. Two overarching, indirectly stated issues pervading the reconceptualization of schooling are multiculturalism and a caring school staff. The book is organized into four parts. Part 1, Rationale and Context, presents a historical context for restructuring and a summary of the current motivations for, and implications of, educational restructuring. Part 2, Changing Roles and Responsibilities, examines the evolution of new roles for essentially all the groups that participate in public education. Part 3, Dimensions of Restructuring, explores the concepts of incremental and discontinuous change and extensively discusses current school restructuring activities along 12 dimensions: learner outcomes, curriculum, instruction, assessment, learning environment, technology, school-community relations, time schedules, governance, teacher leadership, personnel definitions and roles, and working relationships. Part 4, Process of Restructuring, captures the lessons being learned about the restructuring process and presents examples of strategies and techniques. (Contains over 600 references.) (MLH)

california business roundtable: An Inquiry into the Nature and Causes of the Wealth of States Arthur Laffer, Stephen Moore, Rex A. Sinquefeld, Travis H. Brown, 2014-04-14 A passionate, detailed, quantified argument for state-level tax reform An Inquiry into the Nature and Causes of the Wealth of States explains why eliminating or lowering tax burdens at the state level leads to economic growth and wealth creation. A passionate argument for tax reform, the book shows that even states with small populations can benefit enormously with the right policies. The authors' detailed exposition evaluates the impact state and local government policies have on a state's relative performance and economic growth overall, backed up with economic data and analysis. Facts don't lie. But they do point clearly to the failure of so-called progressive tax schemes designed more to curry favor with selected constituencies than to create an economic system that leads to individual wealth as the reward for hard work and entrepreneurial risk taking. An Inquiry into the Nature and Causes of the Wealth of States is a detailed and critical look at income taxation across the nation, and drills down into an analysis of the economic growth or malaise that results from tax policy. Arguing eloquently that a state cannot tax itself into prosperity, just as the impoverished cannot spend themselves into wealth, the authors point out what many inherently know but often fear to say out loud. The book provides detailed quantitative analysis, and discusses the policy variables that can have enormous effects on the financial well-being of states and individual residents, such as: Personal and corporate income tax rates Total tax burden as a percentage of personal income Estate and inheritance taxes Right-to-work laws An Inquiry into the Nature and Causes of the Wealth of States shows everyone how to evaluate state-level fiscal and economic policies to become more competitive.
