century business products: Navigating the 21st Century Business World Dorottya Sallai, Alexander Pepper, 2025-06-26 Case studies have long been an integral part of business and management education. As artificial intelligence transforms teaching and learning, they are

assuming even greater importance. Cases provide the opportunity to learn from real-life scenarios, equipping students with the analytical skills required to critically examine data, apply theory, and interpret complex situations in what is an increasingly noisy and uncertain world. Navigating the 21st Century Business World: Case Studies in Management is a fully open access collection of management cases, featuring examples from the health sector, media, oil and gas industries, fast fashion, financial services, and the public sector. Written by LSE academics and tested in the classroom, the case studies in this book challenge students to evaluate classic issues of management, such as corporate governance and leadership, and to address contemporary dilemmas, from considering a company's responsibilities in the face of man-made climate change to how to create inclusive workforces. Each case details the core dilemmas raised and includes questions for students to consider when preparing the case. Academics and industry trainers can use the collection to make their lessons more hands-on and to enhance their curriculum. The case studies provide practical examples of management decision-making to spark thought-provoking discussions for university students, experienced executives looking to improve their leadership skills, and entrepreneurs seeking a competitive edge.

century business products: The Corporation in the Twenty-First Century John Kay, 2025-01-07

A radical reappraisal of the nature and activities of business--what it is for and how it works A characteristically acerbic analysis of the archetypal organisational unit of capitalism.--Andrew Hill, Financial Times, Best Books of 2024: Business Shortlisted for the 2024 Financial Times and Schroders Business Book of the Year Award In the world of Adam Smith and Karl Marx, capitalists built and controlled mills and factories. That relationship between capital and labor continued in the automobile assembly lines and petrochemical plants of the twentieth century. But no longer: products and production have dematerialized. The goods and services provided by the leading companies of the twenty-first century appear on your screen, fit in your pocket, or occupy your head. Ownership of the means of production is a redundant concept. Workers are the means of production; increasingly, they take the plant home. Capital is a service bought from a specialist supplier with little influence over customer businesses. The professional managers who run modern corporations do not exert authority because they are wealthy; they are wealthy because they exert authority. John Kay's incisive overhaul of our ideas about business redefines our understanding of successful commercial activity and the corporation--and describes how we have come to love the product as we hate the producer. This is a brilliant and original work from one of the greatest economists.
