**degree in business economics: Critical Management Studies** Christopher Grey, Isabelle Huault, Véronique Perret, Laurent Taskin, 2016-02-22 Critical Management Studies (CMS) is often dated from the publication of an edited volume bearing that name (Alvesson and Willmott, 1992). In the two decades that have followed, CMS has been remarkably successful in establishing itself not just as a 'term' but as a recognizable tradition or approach. The emerging status of CMS as an overall approach has been both encouraged and marked by a growing range of handbooks, readers and textbooks. Yet the literature is dominated by writings from the UK and Scandinavia in particular, and the tendency is to treat this literature as constituting CMS. However, the meaning, practice, constraints and context of CMS vary considerably between different countries, cultures and language communities. This volume surveys fourteen various countries and regions where CMS has acquired some following and seeks to explore the different ways in which CMS is understood and the different contexts within which it operates, as well as its possible future development.

**degree in business economics: From Economics to Political Economy** Tim B. Thornton, 2016-07-22 The discipline of economics has been increasingly criticized for its inability to illuminate the workings of the real world and to provide reliable policy guidance for the major economic and social challenges of our time. A central problem in contemporary economics, and a problem from which many of its other failings flow, is its lack of plurality. By a lack of plurality it is meant that contemporary economics lacks diversity in its methods, theories, epistemology and methodology. It is also meant that economics has become far less interdisciplinary. From Economics to Political Economy offers an explanation as to why economics has become so determinedly non-pluralistic, and also gives considerable attention to exploring and evaluating promising strategies for reform. These strategies include developing a pluralist economics under the label of 'political economy' within other social science departments (such as departments of politics). Along the way the reader will learn about the worldwide student movement seeking greater pluralism in economics, encounter some dramatic case studies in intellectual suppression, gain a fuller sense of the nature of contemporary economics and explore the relationship between economics and other social sciences. This book is of interest to any social scientist, particularly those with interests in economics and politics.

**degree in business economics: The Changing World of Oil: An Analysis of Corporate Change and Adaptation** Jerome Davis, 2016-12-14 This book examines broad questions of industrial change in order to explain developments in the oil industry. In contrast to most other work on this industry, firms are considered to be the dependent variables rather than the future production and demand for oil and gas. An analysis of the industry is made by examining how corporations change their operating environments and are themselves changed by their environments. Particular attention is paid to 'mega-mergers' and to industrial downsizing and outsourcing. The significance of such restructuring for the societies the companies serve is also considered and comprehensive use is made of recent theories of the firm. It shows how such theories can be used to analyze a key world-wide industry. The distinctive approach of this book will help extend readers' understanding of the oil industry beyond the more conventional studies.
