cost of google business account: *Big Tech Tyrants* Floyd Brown, Todd Cefaratti, 2019-09-03

As seen on Tucker Carlson They are driven without respect for the lives they are changing... "Boy Kings," or Big Tech Tyrants, are considered the most powerful individuals in the world. They're the autocratic aristocrats who run the tech giants in Silicon Valley, and if the labels are accurate, they suggest these social platform operators have gained a non-elected (or, should we say, a self-elected) authoritarian power. They wield it with more effectiveness and precision than any sitting government or military strategist. Big Tech Tyrants boast riches beyond emperors of old but act like juveniles who don't want to grow up. They are modern-day robber barons. Big Tech Tyrants don't know the meaning of privacy, when it comes to you. They try to make you believe they will give their products away for free as a service to society, when really, they are vacuuming your personal data. They use this data to discover your deepest secrets. Are you or your partner trying to get pregnant? Are you underwater financially? Are you having an extramarital affair? Do you have a tidy nest egg? Are you a Trump supporter? Are you a Bernie Sanders follower? Are you a Scientologist, Mormon, Christian, or Buddhist? Your personal data is extremely valuable to them—and they use it—and abuse. These tyrants knowingly addict users to make more money. Not only that, they also consider themselves the most enlightened the world has ever seen—so they know what's best for you to see—from the news and information you read to the political candidates they think you should vote for. They censor news and only let you see what they want you to see. This is an eye-opening must read for anyone living in the twenty-first century!

cost of google business account: *Ethics and Business* Bart Wernaart, 2021-05-26 Ethics in business is not a new topic and has been intensely discussed since the emergence of the so-called limited companies. However, privatization, technological and digital innovation, changes in moral perception, economic and financial crises and globalization stir a more recent debate on how companies should behave in our societies. This book starts from the position that ethics in business should imply an open debate on norms and values, using a sound methodology to get there. Ethics should cross borders: not only the borders of a country, but also the borders of someone's moral imagination. Ethics should not only be about harmony but also about conflict (and how to deal with that). Ethics should be realistic and well substantiated by academic research. Ethics should be used to understand the complexity of the world, and the challenges companies struggle with on various levels. Therefore, this book is composed of three parts in which ethics is discussed at different levels. In part one we discuss ethics at the level of the individual. In part two we discuss ethics and business. In the third part, ethics is discussed in the context of a globalized world. In each chapter, we discuss the ethical complications of each topic from various - and preferably opposing - perspectives. Each perspective is methodologically and academically substantiated. Each chapter ends with an extensive literature list in which the original sources are listed for further reading. Furthermore, at the end of each chapter, a summary is written in which the most important definitions and viewpoints are highlighted. The frequent use of colorful and bold examples make this an accessible read for bachelor and master students at business schools and professionals in international business.
