etihad airways a380 business class: Competition and Investment in Air Transport Ruwantissa Abeyratne, 2015-12-17 This book addresses emerging legal and economic issues in competition and investment in air transport, against the backdrop of the role governments and airlines should play in avoiding protectionism and encouraging innovation and creativity. It evaluates current trends in air transport and the direction the industry is taking in the twenty first century. There are discussions on key aspects of air transport, such as safety assurance and environmental protection, as they are impacted by competition. The rapid evolution of aerospace transport and its effect on competition in air transport is also examined. A recurring theme of the book is the influence of creative destruction and disruptive innovation on air transport. This is addressed through an in-depth study of the contentious areas of law relating to the abuse of dominant positions and state aid, as reflected in the ongoing claim by the three largest US carriers against Gulf carriers such as Emirates Airlines, Etihad and Qatar Airways. The US carriers claim that Emirates and Etihad - which operate air services into the United States by virtue of an open-skies agreement between the US and The United Arab Emirates - are using generous subsidies given to them by their governments to illegally capture the "legitimate" market belonging to the US carriers. These issues are clarified in the book using analyses of competition law and investment law as they apply to air transport, free-trade-agreement analogies and an open-skies case study.

etihad airways a380 business class: *The Geographies of Air Transport* Andrew R. Goetz, Lucy Budd, 2016-03-09 Making a detailed contribution to geographies of air transport and aeromobility, this book examines the practices and processes that produce particular patterns of air transport provision both regionally and globally. In so doing, it updates the seminal contributions of Eva Taylor (1945), Kenneth Sealy (1957), Brian Graham (1995) and others to the study of air transport geography. Leading scholars in the field offer a unique insight into the key developments that have occurred in the field and the implications that these developments have had for geography, geographers, and global patterns of past, present and future air transport. Although globalization and liberalization processes have greatly expanded the demand for air transport over the last two decades, the industry has experienced several major setbacks due to economic, security, and environmental concerns. Many of these impacts have been much more pronounced in some regions, such as North America and Europe while others, such as Asia-Pacific have not been as adversely affected. Accordingly, there is a clear need to examine these recent economic and geopolitical changes from a geographical perspective given the differentiated pattern of effects from global processes. Addressing this need, this volume opens with thematic chapters covering key topics such as the historical geographies, socio-cultural mobilities, environmental externalities, urban geographies, and sustainability of the global air transport industry, followed by regional analysis of the industry in Asia-Pacific, Latin America, Greater Middle East and Africa as well as North America and Europe.

etihad airways a380 business class: *Luxury* Peter McNeil, Giorgio Riello, 2016-05-19 We live in a world obsessed by luxury. Long-distance airlines compete to offer first-class sleeping experiences and hotels recommend exclusive suites where you are never disturbed. Luxury is a rapidly changing global industry that makes the headlines daily in our newspapers and on the internet. More than ever, luxury is a pervasive presence in the cultural and economic life of the West - and increasingly too in the emerging super-economies of Asia and Latin America. Yet luxury is hardly a new phenomenon. Today's obsession with luxury brands and services is just one of the many manifestations that luxury has assumed. In the middle ages and the Renaissance, for example, luxury was linked to notions of magnificence and courtly splendour. In the eighteenth century luxury was at the centre of philosophical debates over its role in shaping people's desires and oiling the wheels of commerce. And it continues to morph today, with the growth of the global super-rich and increasing wealth polarization. From palaces to penthouses, from couture fashion to lavish jewellery, from handbags to red wine, from fast cars to easy money, Peter McNeil and Giorgio Riello present the first ever global history of luxury, from the Romans to the twenty-first century: a sparkling and ever-changing story of extravagance, excess, novelty, and indulgence.

etihad airways a380 business class: *Buying the Big Jets* Paul Clark, 2017-07-14 Selecting the right aircraft for an airline operation is a vastly complex process, involving a multitude of skills and considerable knowledge of the business. *Buying the Big Jets* has been published since 2001 to provide expert guidance to all those involved in aircraft selection strategies. This third edition brings the picture fully up to date, representing the latest developments in aircraft products and best practice in airline fleet planning techniques. It features a new section that addresses the passenger experience and, for the first time, includes regional jet manufacturers who are now extending their product families into the 100-plus seating category. Overall, the third edition looks at a broader selection of analytical approaches than previously and considers how fleet planning for cost-leader airlines differs from that of network carriers. *Buying the Big Jets* is an industry-specific example of strategic planning and is therefore a vital text for students engaged in graduate or post-graduate studies either in aeronautics or business administration. The book is essential reading for airline planners with fleet planning responsibility, consultancy groups, analysts studying aircraft performance and economics, airline operational personnel, students of air transport, leasing companies, aircraft value appraisers, and all who manage commercial aircraft acquisition programmes and provide strategic advice to decision-makers. It is also a valuable tool for the banking community where insights into aircraft acquisition decisions are vital.

etihad airways a380 business class: *Law and Regulation of Air Cargo* Ruwantissa Abeyratne, 2018-07-23 This book explores the legal and regulatory aspects of the complex air cargo sector, discussing in detail the general principles of the carriage of air cargo; artificial intelligence and air cargo; facilitation; carriage of hazardous goods; human remains; and animals, as well as cargo security; price fixing and anti competitive conduct in air cargo operations; liability issues; the air cargo supply chain and contract of carriage. It also discusses related achievements of the International Civil Aviation Organization; the International Air Transport Association and Airports Council International. The value of goods carried by airlines represents 7.4% of the global Gross Domestic Product. While cargo carried by air accounts for less than 1% of global cargo carriage, airlines carry 35% of the value of world trade, making this industry highly valuable and efficient, and the most reliable way to transport goods throughout the world. On average, airlines transport 52 million metric tons of goods per annum, worth an equivalent of \$6.8 trillion, i.e. \$18.6 billion worth

of goods daily.

This proposed book provides the latest research in the application of innovative technology to the tourism industry, covering the perspectives, innovativeness, theories, issues, complexities, opportunities and challenges. This book, a blend of comprehensive and extensive effort by the contributors and editors, is designed to cover the application and practice of technology in tourism, including the relevant niches. This book focuses on the importance of technology in tourism. This also highlights, in a comprehensive manner, specific technologies that are impacting the tourism industry in Asia, as well as the constraints the industry is facing. The contents of this book deal with distinct topics, such as mobile computing, new product designs, innovative technology usages in tourism promotion, technology-driven sustainable tourism development, location-based apps, mobility, accessibility and so on. A good number of research studies have conducted outlining the contributions and importance of technologies in tourism, in general. However, the tourism industry of Asia so far has attracted very few researchers. Some contributions have been made but not sufficient. Considering the ongoing trend of technology application in the tourism industry in Asia, very few research attempts have been made aiming to explore diverse aspects. Tourism is expanding enormously across the world. which actually creates more demands for effective technologies. This book will be a reading companion, especially for tourism students in higher academic institutions. This book will also be read by the relevant policy planners and industry professionals. Apart from them, this book will be appreciated by expatriate researchers and researchers having keen interest in the Asian tourism industry.
