Unlike traditional PhD programs, these doctorates focus on practical applications of business theory and research, making them highly relevant for executives and senior managers.

Typically, executive doctorate programs emphasize a cohort model, fostering networking and collaboration among peers. This structure allows students to share experiences and insights, enriching the learning process. Programs often feature a blend of online and on-campus coursework, enabling flexibility for busy professionals.

The Structure of Executive Doctorate Programs

The structure of executive doctorate programs generally includes core courses, electives, and a dissertation or capstone project. Core courses typically cover advanced topics in leadership, organizational behavior, and strategic management. Electives allow students to tailor their education to specific interests, such as entrepreneurship, finance, or international business.

The dissertation or capstone project serves as a culmination of the student's learning experience, requiring them to conduct original research or develop a comprehensive business solution. This project not only demonstrates mastery of the subject matter but also contributes to the field of business practice.

executive doctorate business: Executive Business Doctorate Ginger Lange, 2017 There is a significant rise in executive doctoral programs offered by business schools. In offering the executive doctorate, the school administrators opportunistically seek to address an underserved population. This population is comprised of experienced professionals characterized by their collective desire to educate themselves beyond the master's degree level in business, but for whom the traditional, full-time Ph.D. program path does not meet their needs. Although executive doctoral programs seem well-positioned to serve the needs of this population, this relatively new option has yet to prove sustainable value. Thus, the choice to pursue the executive doctorate is risky for prospective students, especially given the significant investments of money, time, and effort. This case study examined the motivations, expectancies, experiences, and outcomes from the perspective of executive doctoral program graduates through the application of modern expectancy-value theory. The researchers conducted in-depth interviews with 33 graduates from five AACSB-accredited executive doctoral programs. The researchers analyzed responses to 37 questions using qualitative and quantitative analysis methods. The results provided rich understanding into the decision process and factors impacting the obtainment of the doctoral degree and realizing value through associated outcomes. This empirical study contributes theoretically by applying all four value components of expectancy-value theory in the graduate business school setting. The research contributes to practice by providing valuable insights to prospective students and doctoral program administrators.

executive doctorate business: Executive Business Doctorate Ginger Lange, Kamau Smith, Katherine Spradley, Wesley James Johnston, 2018 In recent years, the number of executive doctoral programs that business schools offer has risen significantly. For program administrators, offering the doctorate lets them address an underserved population of experienced professionals who desire a business education beyond the master's degree, but for whom traditional, full-time Ph.D. programs are impractical. Although executive doctoral programs seem well positioned to serve this population's needs, this relatively new educational option has yet to garner wide acceptance and recognition for its value in business and academic communities alike. Thus, for prospective students, choosing to pursue the doctorate is risky, especially given the significant investments of money, time, and effort. This study applies modern expectancy-value theory to examine the motivations, expectancies, experiences, and outcomes from the perspective of program graduates. The researchers conducted in-depth interviews with 33 graduates from five doctoral programs in the United States. The five core findings provide rich insights into the decision process, as well as into factors impacting the obtainment of the doctorate and realizing its value. From this study, we argue that the doctorate is valuable and is an essential bridge between academia and industry. This empirical study contributes theoretically by applying the modern expectancy-value theory in the doctoral business school setting; it contributes to practice by providing valuable insights for prospective students and program administrators.

executive doctorate business: *The Future of Management Education* Stéphanie Dameron, Thomas Durand, 2017-01-25 This book discusses the new challenges facing Business Schools around

the world with potential scenarios that may be envisioned for 2030 and strategies for stakeholders. Based on documented descriptions of competitive dynamics in the 'business' of business schools in a variety of countries, the authors highlight the fact that the 'industry' of management education is going through major changes such as new governance and business models, mergers and acquisitions, internationalization of faculty and students coexisting with entrenchment in local markets, ever more needs for financial resources, development of distant and blended learning, and increasing pressure for research output to boost rankings. With concerns surrounding the sustainability of current trends in faculty salary inflation, social acceptability of higher fees, cost of distance learning and the risk of an academic-industry divide around knowledge produced by management research, *The Future of Management Education* develops an analysis of business models and institution regulation. The two volumes cover the context of Business Schools in ten countries and grapples with the challenges they currently face. They specifically discuss foresight scenarios and strategic implications for stakeholders (Deans, faculty, students, prospective students, alumni, local businesses, corporations, government, accreditation bodies).

executive doctorate business: *The Purpose of Business* Albert Erisman, David Gautschi, 2015-10-07 Business is a vital institution for a flourishing society, but there is mounting concern about its role in distorting wealth distribution, enabling and rewarding unethical behaviour, and despoiling the natural environment. A Consortium was formed in 2009 under the leadership of David Gautschi to bring together academics, business people, and interested members of society from around the world to discuss two questions: what is the purpose of business, and what is the role of the business school in the academy? Consortium Fellows gathered in eight sessions over five years from 29 countries to discuss, debate, and share perspectives on these questions. *The Purpose of Business* is an edited collection drawing from the perspectives of these sessions, with contributors from North America, South America, Europe, and Asia bringing culturally and intellectually diverse perspectives on these critical questions. This multifaceted work offers an exploration of business in relation to religion, art, neuroscience, geopolitics, energy, and beyond to inspire a better understanding of the role of business in the 21st century interconnected world.

executive doctorate business: Leadership and Change Management Daphne Halkias, Joseph C. Santora, Nicholas Harkiolakis, Paul W. Thurman, 2017-03-16 A leader's role in the management of change is a critical issue for successful outcomes of strategic initiatives. Globalization and economic instability have prompted an increase in organizational changes related to downsizing and restructuring in order to improve financial performance and organizational competitiveness. Researchers agree that a leader's inability to fully understand what is needed in order to guide their organization through successful change can be a reason for failure. Proper planning and management of change can reduce the likelihood of failure, promote change effectiveness, and increase employee engagement. Yet, change in organizations must be viewed as a continuous activity that affects both organizational and individual outcomes. If change management can be considered as an event induced by socio-cultural factors, the cultural variable gains greater significance when applied to the quality of the relationship between a leader and their team. Many organizations today are on the verge of internationalization. It is here that the cultural context can affect behaviors and, in the same way, leadership style. The research presented in this book by an eminent group of scholars explores the influence of culture - ethnic, regional, religious - on how

leaders manage change within organizations.
