franke business: **Northern Arizona University** Lee C. Drickamer, Peter J. Runge, 2011 Any university is composed of faculty, students, and staff. But these living components change over time and in varying degrees, while the campus buildings are more permanent, remaining for decades, a

century, or longer. This book looks at the buildings that have graced the campus of Northern Arizona University from its opening in 1898 to the present. The school began with a single building, Old Main, and it was joined by five other structures prior to World War I. In the following decades the campus remained relatively small, expanding to approximately twenty-five structures by the late 1950s. During the tenure of President J. Lawrence Walkup (1957Ð1979), the university effectively doubled in size, spreading southward and adding more than forty buildings, including an entire south campus academic center. Since 1979 the campus has witnessed the addition of more than thirty structures, most as infill within the existing campus layout. Arranged chronologically, this extensively illustrated volume briefly describes the history of every building that has been a part of the university's physical layout. The authors describe various structural aspects of each building and provide entertaining and informative anecdotes about events and people associated with the structures. By combing the university's archives, Drickamer and Runge have turned up photographs of each building as it looked shortly after construction and at present, providing a fascinating visual time lapse. With more than two hundred images of campus buildings, many of them never before published, Northern Arizona University: Buildings as History provides a wonderful pictorial chronicle of the campus that will interest architectural historians as well as all those who have called NAU home.

franke business: *Perspectives On User Innovation* Flis Henwood, Stephen Flowers, 2010-10-05
There has been a dramatic shift towards more open, democratised, forms of innovation that are driven by networks of individual users. Users are now visibly active within all stages of the innovation process and across many types of industrial output, and their influence is spreading across many sectors. They are actively engaged with firms in the co-creation of products and services, and firms can no longer control the innovation agenda. This developing phenomenon has large implications for our understanding of the management of innovation. Drawing on practice-based insights, together with theoretical approaches developed in Innovation Studies and Science and Technology Studies, this book brings together a collection of recent work that examines key aspects of this emerging new model of innovation, while highlighting exciting new ideas in this area. With content contributed by academics, practitioners and researchers, this book is a good reference source for academics and general public interested in the management and policy implications of user innovation./a
