2024-01-15 Why on earth would two history nerds use their own free time to write another US history textbook? Well, that, intelligent human, is the right question. This work breaks from the traditional memorization of who, what, when, where, and focuses on why and how. The former is popular in schools due to its efficiency in quantification for testing. You're either right or wrong about remembering facts. But it's so boring that most students turn off their brains once they set foot in the class, and that habit continues well into old age, if not recognized and corrected. Why and how are more subjective, therefore harder to grade. But with their asking, people become re-centered in our collective story, where they belong. Only then can proper context be understood, and criticism and perspective be applied. We believe this approach to be the missing link in our education and understanding of current issues, norms, and discussion points. Hopefully, after reading this work, each reader's critical thinking will activate around all history permanently. That will certainly aid humanity's evolution and communication. Wait, does that mean this book can be categorized as self-help? Argue away!
