new zealand air business class: Liberalization in Aviation Hartmut Wolf, Peter Forsyth, David Gillen, Kai Hüscherlath, Hans-Martin Niemeier, 2016-05-06 The last few decades have witnessed substantial liberalization trends in various industries and countries. Starting with the deregulation of the US airline industry in 1978, regulatory restructuring took place in further network industries such as telecommunications, electricity or railways in various countries around the world. Although most of the liberalization movements were initially triggered by the worrying performances of the respective regulatory frameworks, increases in competition and corresponding improvements in allocative and productive efficiency were typically associated with the respective liberalization efforts. From an academic perspective, the transition from regulated industries to liberalized industries has attracted a substantial amount of research reflected in many books and research articles which can be distilled to three main questions: (1) What are the forces that have given rise to regulatory reform? (2) What is the structure of the regulatory change which has occurred to date and is likely to occur in the immediate future? (3) What have been the effects on industry efficiency, prices and profits of the reforms which have occurred to date? Liberalization in Aviation brings together renowned academics and practitioners from around the world to address all three questions and draw policy conclusions. The book is divided into five sections, in turn dealing with aspects of competition in various liberalized markets, the emergence and growth of low-cost carriers, horizontal mergers and alliances, infrastructures, and concluding with economic assessments of liberalization steps so far and proposed steps in the future.

new zealand air business class: Making New Zealand's Pop Renaissance Michael Scott, 2016-05-13 Since the early 2000s New Zealand has undergone a pop renaissance. Domestic artists' sales, airplay and concert attendance have all grown dramatically while new avenues for 'kiwi' pop exports emerged. Concurrent with these trends was a new collective sentiment that embraced and celebrated domestic musicians. In *Making New Zealand's Pop Renaissance*, Michael Scott argues that this revival arose from state policies and shows how the state built market opportunities for popular musicians through public-private partnerships and organizational affinity with existing music industry institutions. New Zealand offers an instructive case for the ways in which 'after neo-liberal' states steer and co-ordinate popular culture into market exchange by incentivizing cultural production. Scott highlights how these music policies were intended to address various economic and social problems. Arriving with the creative industries' discourse and policy making, politicians claimed these expanded popular music supports would facilitate sustainable employment and a sense of national identity. Yet popular music as economic and social policy presents a paradox: the music industry generates commercial failure and thus requires a large unattached pool of potential talent. Considering this feature, Scott analyses how state programs induced an informal economy of proto-pop production aimed at accessing competitive state funding while simultaneously encouraging musicians to adopt entrepreneurial subjectivities. In doing so he argues New Zealand's music policies are a form of social policy that unintentionally deploy hierarchical structures to foster social inclusion amongst growing numbers of creative workers.

new zealand air business class: *Innovation in Commoditized Service Industries* Maximilian Rothkopf, 2009 The passenger airline industry is a prominent service industry that is becoming increasingly commoditized. As little empirical work in this field exists, this study contributes to research by exploring how passenger airlines leverage innovation in such market conditions from a strategic and organizational view. Comprehensive case studies of a sample of eight passenger airlines constitute the empirical basis. The analysis detects patterns of innovations and draws conclusions on the strategic innovation behavior in the airline industry. The study proposes an organizational concept and a strategic approach for airlines to innovate in an increasingly commoditized market.

The span of his story is peppered with allusions to the locales, books, films, music, and social politics of the times he has experienced. He describes his youthful descent with friends into light criminality his incarceration, and his ultimate salvation and redemption through America's universities, rather than through its Churches. He sketches his

menial jobs as a youth, as well as his later roles as student, university professor, parent, behavioral scientist, and retiree. If you've lived in America between 1940 and today, you'll want to come along on the engrossing scenic drive through his vivid memories.

new zealand air business class: Designing Future-Oriented Airline Businesses Nawal K. Taneja, 2016-04-22 *Designing Future-Oriented Airline Businesses* is the eighth Ashgate book by Nawal K. Taneja to address the ongoing challenges and opportunities facing all generations of airlines. Firstly, it challenges and encourages airline managements to take a deeper dive into new ways of doing business. Secondly, it provides a framework for identifying and developing strategies and capabilities, as well as executing them efficiently and effectively, to change the focus from cost reduction to revenue enhancement and from competitive advantage to comparative advantage. Based on the author's own extensive experience and ongoing work in the global airline industry, as well as through a synthesis of leading business practices both inside and outside of the industry, *Designing Future-Oriented Airline Businesses* sets out to demystify numerous concepts being discussed within the airline industry and to facilitate managements to identify and articulate the boundaries of their business models. It provides material from which managements can set about answering the key questions, especially with respect to strategies, capabilities and execution, and pursue an effective redesign of their business. As with the author's previous books, the primary audience is senior-level practitioners of differing generations of airlines worldwide as well as related businesses. The material presented continues to be at a pragmatic level, not an academic exercise,

to lead managements to ask themselves and their teams some critical thought-provoking questions.

new zealand air business class: Air Transport in the Asia Pacific David Timothy Duval, 2016-03-16 Air transport in the Asia Pacific has undergone significant transformation in the last three decades. What was once a region in the shadow of larger and more prosperous continents such as North America and Europe is now at the forefront of expansion in commercial air-service networks, frequency and capacity, and the overall growth in the contribution of air transport to economies on regional and, in many cases, individual country levels. Despite this, it represents an area that is generally under-represented in the commercial air-transport academic literature. Air Transport in the Asia Pacific seeks to fill this gap. Against this context, the aim of the volume is to offer a contemporary snapshot of current academic research into commercial air transport in the Asia Pacific. While one volume cannot realistically address the complete range of identifiable issues, this book provides timely, specific and research-based studies authored by leading academics and practitioners.
