multi services business: Developing Community Schools, Community Learning Centers, Extended-service Schools and Multi-service Schools Hal A. Lawson, Dolf van Veen, 2015-12-14

This book focuses on special organizational configurations for schools in diverse parts of the world. Some of these new organizational and institutional designs are called multi-service schools, others are called extended service schools and still others are called community learning centers. While these schools have different names and notable different characteristics, they belong in the same category because of a common feature in their design: they connect schools with once-separate community programs and services. Chief among the prototypes for these new organizational and institutional designs are the ones featured in the book's title. Some are called multi-service schools to indicate that they selectively provide some new programs and services. Others are called extended service schools to indicate that they serve young people beyond the regular school day, seeking influence and control over out-of-school time while enabling alternative teaching-learning strategies, and providing services other than typical "pupil support services." Still others are called community learning centers, a name that showcases the educational functions and priorities of schools and announcing priorities for adult learning and development. Community schools, still called in some places full-service community schools, serves as a prototype that increasingly positions schools as multi-purpose, multi-component, anchor institutions serving identifiable neighborhoods and entire rural communities. The book is structured to enhance understanding of these organizational prototypes and provides comparative social analysis. It also identifies knowledge needs and gaps as well as developmental territory for the future.

multi services business: Service Research Challenges and Solutions for the Future Internet M. Papazoglou, Klaus Pohl, Michael Parkin, Andreas Metzger, 2010-12-15 S-Cube's Foundations for the Internet of Services Today's Internet is standing at a crossroads. The Internet has evolved from a source of information to a critical infrastructure which underpins our lives and economies. The demand for more multimedia content, more interconnected devices, more users, a richer user experience, services available any time and anywhere increases the pressure on existing networks and service platforms. The Internet needs a fundamental rearrangement to be ready to meet future needs. One of the areas of research for the Future Internet is the Internet of S- vices, a vision of the Internet where everything (e. g. , information, software, platforms and infrastructures) is available as a service. Services available on the Internet of Services can be used by anyone (if they are used according to the policies defined by the provider) and they can be extended with new services by anyone. Advantages of the Internet of Services include the possibility to build upon other people's efforts and the little investment needed upfront to develop an application. The risk involved in pursuing new business ideas is diminished, and might lead to more innovative ideas being tried out in practice. It will lead to the appearance of new companies that are able to operate in niche areas, providing services to other companies that will be able to focus on their core business.

multi services business: A European Strategy for Jobs and Growth Great Britain:

Parliament: House of Lords: European Union Committee, 2006-03-16 This report by the European Union Committee examines the progress of the European Union in initiating a strategy for jobs and growth across the Community as a whole. The background to this report stems from the Spring European Council meeting in 2000, in Lisbon, and the launch of an economic reform agenda. The Committee observes that since the Lisbon Agenda, little progress has been made and the performance of many of the larger European economies has been poor. The Committee has noted that certain worrying signs of protectionist behaviour have developed, especially regarding barriers of cross border mergers. The EU has recognized this weak performance and the Agenda was relaunched in 2005, with a greater focus on the key economic priorities of more growth and jobs. Also, all Member States are now required to produce an annual National Action Plan highlighting the policies being pursued to improve economic growth and increase employment. The Committee sets out a number of recommendations to further push forward the priorities of growth and jobs, including: that the Commission should seek to complete the progress towards an internal market; that Member States should influence one another in the development of good practice through statistical comparison of their economic progress, and agree on quantifiable targets; that the format of the National Action Plans should include not only the successes, but where countries are underperforming; that the Agenda be given a higher public profile.
