phd business degrees: Doctoral Education and the Faculty of the Future Ronald G. Ehrenberg, Charlotte V. Kuh, 2011-05-02 American colleges and universities simultaneously face large numbers of faculty retirements and expanding enrollments. Budget constraints have led colleges and universities to substitute part-time and full-time non-tenure-track faculty for tenure-track faculty, and the demand for faculty members will likely be high in the decade ahead. This heightened demand is coming at a time when the share of American college graduates who go on for PhD study is far below its historic high. The declining interest of American students in doctoral programs is due to many factors, including long completion times, low completion rates, the high cost of doctoral

education, and the decline in the share of faculty positions that are tenured or on the tenure track. In short, doctoral education is in crisis because the impediments are many and the rewards are few; students often choose instead to enroll in professional programs that result in more marketable credentials. In *Doctoral Education and the Faculty of the Future*, scientists, social scientists, academic administrators, and policy makers describe their efforts to increase and improve the supply of future faculty. They cover topics ranging from increasing undergraduate interest in doctoral study to improving the doctoral experience and the participation of underrepresented groups in doctoral education.

phd business degrees: Business and Development Studies Peter Lund-Thomsen, Michael Wendelboe Hansen, Adam Lindgreen, 2019-10-16 Business and Development Studies: Issues and Perspectives provides a comprehensive collection of cutting-edge theoretical and empirical contributions to the emerging field of business and development studies. Compared to more traditional business-school accounts of business in developing countries which focus on the challenges and opportunities of doing business in developing countries, this anthology explores whether, how, and under what conditions business contributes to the achievement of economic, social, and environmental goals in developing countries. The book consolidates the current status of academic work on business and development, identifies state of the art in relation to this academic field, and establishes a future research agenda for 'business and development studies' as an emerging academic discipline within the social sciences. The book will be of interest to researchers and students, including economists, geographers, sociologists, political scientists, corporate social responsibility specialists, and development scholars who are seeking an in-depth overview of current debates about the role of business as a development agent in the Global South. The book is also of relevance to practitioners that are engaged in work with the private sector seeking to enhance the positive effects and minimize the negative economic, social, and environmental consequences of business activity in the Global South.

phd business degrees: New York University's Stern School of Business Abraham L. Gitlow, 1995-06 American business schools from their inception in the 1880's, have grown dramatically both in quality and in numbers. Regarded as late as the 1950's as essentially vocational schools whose role in academia was still to be resolved, they are now among the most respected professional schools in the university community. In recent decades, this increase in prestige has been matched by the growth of both Bachelor's and MBA programs. The forces and events shaping this dramatic rise in importance have been recounted by Dean Emeritus of New York University's Stern School of Business, Abraham L. Gitlow. He brings his 45 years of experience as a faculty member at the Stern School to bear as he analyzes the educational and philosophical issues and tensions that marked the history of the school, and of American higher education in general, in the twentieth century.

phd business degrees: Doing Research in Business and Management Dan Remenyi, Brian Williams, Arthur Money, Ethné Swartz, 1998-08-07 'There is, as with all the chapters, an excellent set of suggested further reading...' - Management Learning 'Postgraduate students should find this a useful book, since it focuses on issues specific to their requirements. The philosophical underpinnings, methodology and practicalities of research are all discussed within the context of postgraduate research' - International Small Business Journal This wide-ranging text comprehensively overviews management research and research methodology. The authors take the reader through all the major stages of the research process and introduce the key methods. After highlighting the different contexts and purposes, strategies and tactics, programmes and processes of management research, the authors provide detailed coverage of the relevant research approaches and methods. They discuss the interrelationship of theoretical and empirical research, and how these apply to practice. The implications of using quantitative and qualitative methods are examined, and practical advice is given on the available analysis techniques and software packages.
