Hinson, Doreen Anyamesem Odame, Eric Kwame Adaye, Kwame Adom, 2023-10-31 This book explores the issues around small business and entrepreneurial activities in Africa within the context of frequent collapse of businesses, seizures by governments, lack of access to capital and raw materials as well as the reliance on the informal sector. All these issues, the Editors argue, have been exacerbated by the advent of the COVID-19 pandemic. However, entrepreneurship must be at the heart of efforts to transform Africa's economic prospects to ensure sustained economic growth and decent work for all. In looking at the development of entrepreneurship for Africa's growth, contributors to this edited collection take an evolutionary approach by focusing on entrepreneurial intentions (where entrepreneurial ideas are formed), customer management (which is central to all entrepreneurial business success) and by also focusing on local and entrepreneurial business development. The book then ends with a discussion around technological innovations in small business development in Africa. Covering topics such as social entrepreneurship, international joint ventures and the impact of digital platforms, this conceptual path provides rich contemporary insights for students, researchers, and policy makers and contributes to the achievement of SDG 8 targets.

small business data analytics: *Fintech, Small Business & The American Dream* Karen G. Mills, 2024-06-21 Small businesses are the backbone of the U.S. economy. They are the biggest job creators and offer a path to the American Dream. But for many, it is difficult to get the capital they need to operate and succeed. In *Fintech, Small Business & the American Dream*, former U.S. Small Business Administrator and Senior Fellow at Harvard Business School, Karen G. Mills, focuses on the needs of small businesses for capital and how technology will transform the small business lending market. This is a market that has been plagued by frictions: it is hard for a lender to figure out which small businesses are creditworthy, and borrowers often don't know how much money or what kind of loan they need. Every small business is different; one day the borrower is a dry cleaner and the next a parts supplier, making it difficult for lenders to understand each business's unique circumstances. Today, however, big data and artificial intelligence have the power to illuminate the opaque nature of a small business's finances and make it easier for them access capital to weather bumpy cash flows or to invest in growth opportunities. Beginning in the dark days following the 2008-9 recession and continuing through the crisis of the Covid-19 Pandemic, Mills charts how fintech has changed and will continue to change small business lending. In the new fintech landscape financial products are embedded in applications that small business owners use on daily basis, and data powered algorithms provide automated insights to determine which businesses are creditworthy. Digital challenger banks, big tech and traditional banks and credit card companies are deciding how they want to engage in the new lending ecosystem. Who will be the winners and losers? How should regulators respond? In this pivotal moment, Mills elucidates how financial innovation and wise regulation can restore a path to the American Dream by improving access to small business credit. An ambitious book grappling with the broad significance of small business to the economy, the historical role of credit markets, the dynamics of innovation cycles, and the policy implications for regulation, this second edition of *Fintech, Small Business & the American Dream* is relevant to bankers, regulators and fintech entrepreneurs and investors; in fact, to anyone who is interested in the future of small business in America.
