Miller, 2007-01-01 Holistic education is concerned with connections in human experience - connections between mind and body, between linear thinking and intuitive ways of knowing, between academic disciplines, between individual and community, and between the personal self and the transpersonal Self that all spiritual traditions believe exist beyond the ego. First published in 1988, The Holistic Curriculum examines the philosophical, psychological, and social foundations of holistic education, provides an outline of its history, and discusses practical applications for this type of learning in the classroom. This revised and expanded second edition concisely describes how holistic thinking integrates spiritual and scientific perspectives, drawing on romantic, humanistic, and other radical alternatives to the atomistic worldview of the modern age. The role of the teacher, the issue of accountability, and strategies for implementing the Holistic Curriculum are also discussed.

solar power business for sale: Grand Canyon For Sale Stephen Nash, 2017-09-05 Grand Canyon For Sale is a carefully researched investigation of the precarious future of America's public lands: our national parks, forests, wildlife refuges, monuments, and wildernesses. Taking the Grand Canyon as his key example, and using on-the-ground reporting as well as scientific research, Stephen Nash shows how accelerating climate change will dislocate wildlife populations and vegetation across hundreds of thousands of square miles of the national landscape. In addition, a growing political movement, well financed and occasionally violent, is fighting to break up these federal lands and return them to state, local, and private control. That scheme would foreclose the future for many wild species, which are part of our irreplaceable natural heritage, and also would devastate our national parks, forests, and other public lands. To safeguard wildlife and their habitats, it is essential to consolidate protected areas and prioritize natural systems over mining, grazing, drilling, and logging. Grand Canyon For Sale provides an excellent overview of the physical and biological challenges facing public lands. The book also exposes and shows how to combat the political activity that threatens these places in the U.S. today.

solar power business for sale: Green Finance and Investment Clean Energy Finance and Investment Roadmap of Thailand OECD, 2024-06-10 Thailand has adopted ambitious clean energy targets to meet its long-term climate goals, committing to reach carbon neutrality by 2050 and net zero greenhouse gas (GHG) emissions by 2065. Transforming Thailand's energy system, alongside broader development objectives, is critical to meeting these goals as the energy sector accounts for 69% of Thailand's total GHG emissions. The Clean Energy Finance and Investment Roadmap of Thailand ("the Roadmap") outlines key actions to unlock finance and investment in two clean energy sectors: (i) renewable power, with special attention to small-scale renewable power systems; and (ii) energy efficiency in buildings, with a focus on cooling applications. The two sectors were selected in close consultation with the Department of Alternative Energy Development and Efficiency (DEDE) of the Ministry of Energy of Thailand. The Roadmap provides a comprehensive overview of the progress to date, policy context and challenges to mobilise near-term finance in those sectors, as well as estimates of the finance needs to reach Thailand's clean energy plans. The report also includes a roadmap action plan, suggesting non-prescriptive recommendations and actions that the Government of Thailand, financial institutions, energy service companies, academia and the international development community active in the country could undertake to foster clean energy investments in Thailand.
