uccu business account: The Coxsackie B Viruses Steven Tracy, Nora M. Chapman, Brian W.J.

Mahy, 2013-06-29 S. TRACY Late in the 1940s, a virus was isolated from a young patient with a flaccid paralysis in the sleepy Hudson River town of Coxsackie in the state of New York. Within the next few years, it was apparent that this and other similar viruses were not polioviruses but were indeed a new group of viruses, viruses that by the mid- 1950s had been found to be commonly associated with pediatric inflammatory heart disease. Two groups of coxsackieviruses (A and B) were differentiated on the basis of the type of paralysis induced in suckling mice by these viruses. Group B coxsackieviruses, because of their primacy as etiologic agents of human acute viral myocarditis and its relatively common sequela, dilated cardiomyopathy, are the focus of this volume. of the century approaches, the massive international effort to eradicate polioviruses through vaccination as causes of human disease has been successful in the Western Hemisphere and in many parts of Europe, and it is expected that worldwide eradication may be achieved within the near future. While this is wonderful news, there are sadly no similar efforts being planned to combat the numerous other human enteroviruses that daily incur widespread morbidity and mortality throughout the world. While this is due in part to the lack of specific knowledge about the other human enteroviruses, it is also due to the perceptions of industry that there is insufficient profit to be made by developing these vaccines.

uccu business account: Process Technologies for Water Treatment S. Stucki, 2013-03-09 The

Brown Boveri Scientific Symposia by now are part of a firmly established tradition. This is the tenth event in a series which was initiated shortly after Corporate Research was created as a separate entity in our company; the symposia are held every other year. The themes have been: 1969 Flow Research on Blading 1971 Real-Time Control of Electric Power Systems 1973 High-Temperature Materials in Gas Turbines 1975 Nonemissive Electrooptic Displays 1977 Current Interruption in High-Voltage Networks 1979 Surges in High-Voltage Networks 1981 Semiconductor Devices for Power Conditioning 1983 Corrosion in Power Generating Equipment 1985 Computer Systems for Process Control 1987 Process Technologies for Water Treatment The tenth event in an uninterrupted series that by now goes back almost 20 years is a good opportunity to make a few remarks on the guiding rules that have governed our symposia. Why have we chosen these titles? At the outset we established certain selection criteria; we felt that a subject for a symposium should fulfill the following three requirements: It should characterize a part of an established discipline; in other words, it should describe an area of scholarly study and research. It should be of current interest in the sense that important results have recently been obtained and considerable research is

still being undertaken in the world's scientific community. It should bear some relation to the scientific and technological activity of the company.

uccu business account: The Nucleolus Mark O. J. Olson, 2004-08-03 As the first comprehensive overview of the nucleolus since 1985, *The Nucleolus* covers our current understanding of the cell nucleolus, including its role in ribosome assembly and its additional newly-discovered activities. The eighteen chapters have been written by experts who are actively engaged in research on the nucleolus and have an in depth review of the following topics: - nucleolar ultrastructure and dynamics, - behavior during mitosis, - ribosomal DNA gene and chromatin structure, - pre-ribosomal RNA transcription, - processing and modification, - ribosome assembly, - small nucleolar RNAs, - proteomics and non-traditional functions of the nucleolus. Separate chapters are also provided for yeast and higher eukaryotes on many topics. *The Nucleolus* will appeal not only to scientists directly engaged in nucleolar research, but also those working in related areas such as gene expression, protein biosynthesis, ribosome structure, transcription, chromatin structure, molecular genetics and the structure and functions of the cell nucleus in general.

Smol, 2012-04-08 Numerical and statistical methods have rapidly become part of a palaeolimnologist's tool-kit. They are used to explore and summarise complex data, reconstruct past environmental variables from fossil assemblages, and test competing hypotheses about the causes of observed changes in lake biota through history. This book brings together a wide array of numerical and statistical techniques currently available for use in palaeolimnology and other branches of palaeoecology. uccu business account: **Catalytic RNA** Fritz Eckstein, David M.J. Lilley, 2012-12-06 In recent years, unprecedented advances in many aspects of the molecular biology of nucleic acids have been witnessed. The area of RNA chemistry has undergone a kind of explosion, with a huge interest in RNA-mediated catalysis. At the same time, our structural understanding of DNA-protein interactions has increased enormously, and the related area of RNA-protein interactions is beginning to gather pace. This softcover edition from the successful series *Nucleic Acids and Molecular Biology* is devoted to the structure and mechanism of ribozymes, and their potential exploitation. The subject has both important evolutionary implications and potential practical application in the development of therapeutic agents for diseases such as AIDS.

uccu business account: *A General Topology Workbook* Iain T. Adamson, 2012-12-06 This book has been called a Workbook to make it clear from the start that it is not a conventional textbook. Conventional textbooks proceed by giving in each section or chapter first the definitions of the terms to be used, the concepts they are to work with, then some theorems involving these terms (complete with proofs) and finally some examples and exercises to test the readers' understanding of the definitions and the theorems. Readers of this book will indeed find all the conventional constituents--definitions, theorems, proofs, examples and exercises but not in the conventional arrangement. In the first part of the book will be found a quick review of the basic definitions of general topology interspersed with a large number of exercises, some of which are also described as theorems. (The use of the word Theorem is not intended as an indication of difficulty but of importance and usefulness.) The exercises are deliberately not graded--after all the problems we meet in mathematical real life do not come in order of difficulty; some of them are very simple illustrative examples; others are in the nature of tutorial problems for a conventional course, while others are quite difficult results. No solutions of the exercises, no proofs of the theorems are included in the first part of the book--this is a Workbook and readers are invited to try their hand at solving the problems and proving the theorems for themselves.

uccu business account: **Quantum Kinetic Theory and Applications** Fedir T. Vasko, Oleg E. Raichev, 2005-08-16 This lecture-style monograph is addressed to several categories of readers. First, it will be useful for graduate students studying theory. Second, the topics covered should be

interesting for postgraduate students of various specializations. Third, the researchers who want to understand the background of modern theoretical issues in more detail can find a number of useful results here. The phenomena covered involve kinetics of electron, phonon, and photon systems in solids. The dynamical properties and interactions of electrons, phonons, and photons are briefly described in Chapter 1. Further, in Chapters 2-8, the authors present the main theoretical methods: linear response theory, various kinetic equations for the quasiparticles under consideration, and diagram technique. The presentation of the key approaches is always accompanied by solutions of concrete problems to illustrate ways to apply the theory. The remaining chapters are devoted to various manifestations of quantum transport in solids. The choice of particular topics is determined by their scientific importance and methodological value. The 267 supplementary problems presented in the ends of chapters are offered to guide the reader in self-study. Focusing attention on the methodological aspects and discussing a great diversity of kinetic phenomena, in keeping with the guiding principle a method is more important than a result, the authors minimize both detailed discussion of physical mechanisms of the phenomena considered and comparison of theoretical results to experimental data.

uccu business account: Ribosomes Alexander Spirin, 2013-03-09 This book is based on an advanced course of lectures on ribosome structure and protein biosynthesis that I offer at the Moscow State University. These lectures have been part of a general course on molecular biology for almost three decades, and they have undergone considerable evolution as knowledge has been progressing in this field. The progress continues, and readers should be prepared that some facts, statements, and ideas included in the book may be incomplete or out of-date. In any case, this is primarily a textbook, but not a comprehensive review. It provides a background of knowledge and current ideas in the field and gives examples of observations and their interpretations. I understand that some interpretations and generalizations may be tentative or disputable, but I hope that this will stimulate thinking and discussing better than if I left white spots. The book has a prototype: it is my monograph *Ribosome Structure and Protein Biosynthesis* published by the Benjamin/Cummings Publishing Company, Menlo Park, California, in 1986. Here I have basically kept the former order of presentation of the topics and the subdivision into chapters. The contents of the chapters, however, have been significantly revised and supplemented. The newly written chapters on translational control in prokaryotes (Chapter 16) and eukaryotes (Chapter 17) are added.

uccu business account: Fluids in the Crust K. Shmulovich, Bruce Yardley, G. Gonchar, 1994-12-31 For much of the 20th century, scientific contacts between the Soviet Union and western countries were few and far between, and often superficial. In earth sciences, ideas and data were slow to cross the Iron Curtain, and there was considerable mutual mistrust of diverging scientific philosophies. In geochemistry, most western scientists were slow to appreciate the advances being made in the Soviet Union by O. Korzhinskii, who put the study of ore genesis on a rigorous thermodynamic basis as early as the 1930s. Korzhinskii appreciated that the most fundamental requirement for the application of quantitative models is data on mineral and fluid behaviour at the elevated pressures and temperatures that occur in the Earth's crust. He began the work at the Institute of Experimental Mineralogy (IEM) in 1965, and it became a separate establishment of the Academy of Sciences in Chernogolovka in 1969. The aim was to initiate a major programme of high P-T experimental studies to apply physical chemistry and thermodynamics to resolving geological problems. For many years, Chernogolovka was a closed city, and western scientists were unable to visit the laboratories, but with the advent of perestroika in 1989, the first groups of visitors were eagerly welcomed to the IEM. What they found was an experimental facility on a massive scale, with 300 staff, including 80 researchers and most of the rest providing technical support.

uccu business account: Biological Regulation and Development Robert Goldberger, 2012-12-06 The motivation for us to produce a treatise on regulation was mainly our conviction that it would be fun, and at the same time productive, to approach the subject in a way that differs from that of other treatises. We had ourselves written reviews for various volumes over the years, most of them bringing together all possible facts relevant to a particular operon, virus, or biosynthetic

system. And we were not convinced of the value of such reviews for anyone but the expert in the field reviewed. We thought it might be more interesting and more instructive-for both author and reader-to avoid reviewing topics that anyone scientist might work on, but instead to review the various parts of what many different scientists work on. Cutting across the traditional boundaries that have separated the subjects in past volumes on regulation is not an easy thing to do-not because it is difficult to think of what interesting topics should replace the old ones, but because it is difficult to find authors who possess sufficient breadth of knowledge and who are willing to write about areas outside those pursued in their own laboratories. For example, no one scientist works on suppression per se. He may study the structure of suppressor tRNAs in *Escherichia coli*, he may study phenotypic suppression of various characters in *Drosophila*, he may study polarity in gene expression, and so on.

uccu business account: Methods of Homological Algebra Sergei I. Gelfand, Yuri I. Manin, 2013-03-09 Homological algebra first arose as a language for describing topological prospects of geometrical objects. As with every successful language it quickly expanded its coverage and semantics, and its contemporary applications are many and diverse. This modern approach to homological algebra, by two leading writers in the field, is based on the systematic use of the language and ideas of derived categories and derived functors. Relations with standard cohomology theory (sheaf cohomology, spectral sequences, etc.) are described. In most cases complete proofs are given. Basic concepts and results of homotopical algebra are also presented. The book addresses people who want to learn a modern approach to homological algebra and to use it in their work. For the second edition the authors have made numerous corrections.

uccu business account: Practical Reasoning Dov M. Gabbay, 1996-05-21 This book constitutes the refereed proceedings of the International Conference on Formal and Applied Practical Reasoning, FAPR '96, held in Bonn, Germany, in June 1996. The 51 revised full papers included in the book together with eight posters were carefully selected for presentation at the conference. The book addresses current aspects of the highly interdisciplinary area of practical reasoning in artificial intelligence, philosophy, psychology, linguistics, software engineering, intelligent systems, and industrial applications. Among the topics addressed are user modeling, belief, legal reasoning, argumentation, dialogue logic, default reasoning, analogy, metareasoning, temporal and procedural reasoning, and many others.

uccu business account: Lie Group Actions in Complex Analysis Dimitrij Akhiezer, 2012-12-06 This book was planned as an introduction to a vast area, where many contributions have been made in recent years. The choice of material is based on my understanding of the role of Lie groups in complex analysis. On the one hand, they appear as the automorphism groups of certain complex spaces, e. g. , bounded domains in $\mathbb{C}^n$ or compact spaces, and are therefore important as being one of their invariants. On the other hand, complex Lie groups and, more generally, homogeneous complex manifolds, serve as a proving ground, where it is often possible to accomplish a task and get an explicit answer. One good example of this kind is the theory of homogeneous vector bundles over flag manifolds. Another example is the way the global analytic properties of homogeneous manifolds are translated into algebraic language. It is my pleasant duty to thank A. L. Onishchik, who first introduced me to the theory of Lie groups more than 25 years ago. I am greatly indebted to him and to E. B. Vinberg for the help and advice they have given me for years. I would like to express my gratitude to M. Brion, B. Gilligan, P. Heinzner, A. Huckleberry, and E. Oeljeklaus for valuable discussions of various subjects treated here. A part of this book was written during my stay at the Ruhr-Universität Bochum in 1993. I thank the Deutsche Forschungsgemeinschaft for its research support and the colleagues in Bochum for their hospitality.

uccu business account: Advances in Molecular Biology and Targeted Treatment for AIDS Ajit Kumar, 2012-12-06 Since the discovery of HIV-1 as the etiologic agent of acquired immunodeficiency syndrome (AIDS) in the early 1980s, remarkable progress has been made in both the basic understanding of the biological processes leading to AIDS and an accelerated effort in finding new treatments. As is often the case in rapidly advancing fields, most of the scientific discussions are best handled in specialized groups. The effort to organize a meeting on advances in

molecular biology and targeted treatment for AIDS was an experiment of sorts to gather experts in selected areas of overlapping interests where advances in basic biology and its application in the development of new drugs could be discussed. Of necessity, the scope of the meeting had to be limited to maintain a certain focus. Important areas of rapid development in AIDS research, such as the vaccine development, epidemiology, animal models, etc. , had to be left out for more specialized meetings. The result, from all accounts, appeared to be quite a successful gathering, which provided a forum for informal discussions among scientists from industry and academic institutions. A remarkable feature of the AIDS virus is its genetic complexity and how some of its seemingly extra genes manage to regulate the normal functions of the host and most importantly its immune system.
