uiuc business council: Energy G. Ali Mansoori, 2015-11-05 This 800-page premier book on energy focuses on energy sources, utilizations, legislations and sustainability as it relates to a state, a province, or a country, or a community within a state. This book presents various kinds of energy

sources, ways to convert energy for end use, better use of energy towards conservation and energy-and environmental-sustainability. As a very proper model-state the authors chose the State of Illinois which has the largest overall fossil energy reserves, including the largest strippable bituminous coal reserves; the largest user of nuclear energy in USA and has also been investing in all kinds of renewable energies including wind energy, solar energy, biofuels, geothermal energy, and various energy storage options. In the authors' opinion, State of Illinois is a pioneer in legislations for proper development and use of all kinds of energy. Their motivation to do this project was to educate the public (including students, energy engineers and planners, as well as state- and country-wide policy makers) about all aspects of energy. In this book, the authors present various energy sources, conversions technologies, and conservation possibilities. In every case, the authors have presented various options available for a country, for a state, or for a community to achieve its goal of energy sufficiency, clean environment and as a result, sustainability. Variety of schemes related to each energy source and its related conversion technologies are presented and sustainability of renewable energy sources is discussed. All the possible energy sources including coal, natural gas, petroleum, nuclear, solar, wind, biofuels and geothermal energy are presented in this book, as well as energy storage options. The authors have also presented various ways of dealing with carbon dioxide, which is produced from fossil fuels combustion, including its collection, transportation, storage and sequestration. The energy storage systems presented in this book will facilitate reliable and full integration of renewable power to the grid.--

uiuc business council: Machine Learning in Cyber Trust Jeffrey J. P. Tsai, Philip S. Yu, 2009-04-05 Many networked computer systems are far too vulnerable to cyber attacks that can inhibit their functioning, corrupt important data, or expose private information. This book contains original materials by leading researchers in the area and covers applications of different machine learning methods in the reliability, security, performance, and privacy issues of cyber space. It enables readers to discover what types of learning methods are at their disposal, summarizing the state-of-the-practice in this significant area, and giving a classification of existing work. uiuc business council: Free Market Missionaries Sharon Beder, 2012-06-25 In her recent book *Suiting Themselves*, bestselling author Sharon Beder exposed how the global corporate elite have brazenly rewritten the rules of the global economy to line their pockets. In this new book she turns her sights on the insidious underbelly of this global trend to show how they have also orchestrated a mass propaganda campaign to manipulate community values and convince us that their interest - co-opting and controlling all of us in the name of the free market - is in our interest. During the 20th century, business associations coordinated mass propaganda campaigns combining 20th century American PR methods with revitalized free market ideology from 18th century Europe. The aim was to persuade people to eschew their own power as workers and citizens, and forego their democratic power to restrain and regulate business activity. Sophisticated corporate-funded think tanks augmented these campaigns in the 1970s and 1980s, promoting free enterprise and business-friendly policies. These free market missionaries now seek to change individual and institutional values through bolder strategies such as expanding share ownership and manipulating wider public concerns. In each case the goal is the same: the triumph of business values over community values. Beder's is an intellectual call to arms: challenge the ideology of the free market missionaries or be converted to it.

uiuc business council: Mississippi Weather and Climate Kathleen Sherman-Morris, Charles L. Wax, Michael E. Brown, 2012-04-10 From Hurricane Katrina to the Mississippi River floods of 1927 and 2011, and from a high temperature of 115 degrees Fahrenheit to a low of -19, Mississippi has seen its share of weather extremes. In fact, Mississippi's rainfall can be described in terms of feast or famine. Even during the feast years, the rain may come at the wrong time for farmers to plant crops or in unwanted quantities. The Pearl River flood of 1979 is an example of too much rain falling over a short period of time with disastrous consequences. *Mississippi Weather and Climate* explores some of the reasons behind these extremes. The book begins with a look at the factors that shape Mississippi's climate and then moves into a discussion of normal weather conditions. Three chapters take a closer look at some of Mississippi's most dramatic weather. Historical events including the Candlestick Park tornado, Hurricanes Camille and Katrina, and the ice storms of 1994 and 1998 are described in more detail. The book details Mississippi's past climate as well as its projected climate and explores what the future may hold for residents of the state. Finally, the last two chapters reveal how the weather and climate affect people, from the way homes were built in Mississippi's early days and the types of plants that thrive or die here to the way weather information is collected and reported in the form of a local TV weather forecast. *Mississippi Weather and Climate* is a fascinating look at the science behind the weather and how natural events affect the people and land in the Magnolia State.

uiuc business council: Academic and Professional Writing in an Age of Accountability

Shirley Wilson Logan, Wayne H. Slater, 2018-12-27 What current theoretical frameworks inform academic and professional writing? What does research tell us about the effectiveness of academic and professional writing programs? What do we know about existing best practices? What are the current guidelines and procedures in evaluating a program's effectiveness? What are the possibilities in regard to future research and changes to best practices in these programs in an age of accountability? Editors Shirley Wilson Logan and Wayne H. Slater bring together leading scholars in rhetoric and composition to consider the history, trends, and future of academic and professional writing in higher education through the lens of these five central questions. The first two essays in the book provide a history of the academic and professional writing program at the University of Maryland. Subsequent essays explore successes and challenges in the establishment and development of writing programs at four other major institutions, identify the features of language that facilitate academic and professional communication, look at the ways digital practices in academic and professional writing have shaped how writers compose and respond to texts, and examine the role of assessment in curriculum and pedagogy. An afterword by distinguished rhetoric and composition scholars Jessica Enoch and Scott Wible offers perspectives on the future of academic and professional writing. This collection takes stock of the historical, rhetorical, linguistic, digital, and evaluative aspects of the teaching of writing in higher education. Among the critical issues addressed are how university writing programs were first established and what early challenges they faced, where writing programs were housed and who administered them, how the language backgrounds of composition students inform the way writing is taught, the ways in which current writing technologies create new digital environments, and how student learning and programmatic outcomes should be assessed.

Recruitment calls for enlistment in the military. Tub-thumpers excoriating American society with over-the-top rhetoric. At every turn, Americans are exhorted to spend money, join organizations, rally to causes, or express outrage. *Image Makers* is a comprehensive analysis of modern advocacy-from commercials to public service ads to government propaganda-and its roots in advertising and public relations. Robert Jackall and Janice M. Hirota explore the fashioning of the apparatus of advocacy through the stories of two organizations, the Committee on Public Information, which sold the Great War to the American public, and the Advertising Council, which since the Second World War has been the main coordinator of public service advertising. They then turn to the career of William Bernbach, the adman's adman, who reinvented advertising and grappled creatively with the profound skepticism of a propaganda-weary midcentury public. Jackall and Hirota argue that the tools-in-trade and habits of mind of image makers have now migrated into every corner of modern society. Advocacy is now a vocation for many, and American society abounds as well with technicians in moral outrage, including street-smart impresarios, feminist preachers, and bombastic talk-radio hosts. The apparatus and ethos of advocacy give rise to endlessly shifting patterns of conflicting representations and claims, and in their midst *Image Makers* offers a clear and spirited understanding of advocacy in contemporary society and the quandaries it generates.
