aviation history anne millbrooke: Who Owns America's Past? Robert C. Post, 2013-10-15 When preserving our history, what do we choose to value, why, and who decides? Honorable Mention for the National Council on Public History Book Award of the National Council on Public History In 1994, when the National Air and Space Museum announced plans to display the Enola Gay, the B-29 sent to destroy Hiroshima with an atomic bomb, the ensuing political uproar caught the museum's parent Smithsonian Institution entirely unprepared. As the largest such complex in the world, the Smithsonian cares for millions of objects and has displayed everything from George Washington's sword to moon rocks to Dorothy's ruby slippers from The Wizard of Oz. Why did this particular object arouse such controversy? From an insider's perspective, Robert C. Post's Who Owns America's Past? offers insight into the politics of display and the interpretation of history. Never before has a book about the Smithsonian detailed the recent and dramatic shift from collection-driven shows, with artifacts meant to speak for themselves, to concept-driven exhibitions, in which objects aim to tell a story, displayed like illustrations in a book. Even more recently, the trend is to show artifacts along with props, sound effects, and interactive elements in order to create an immersive environment. Rather than looking at history, visitors are invited to experience it. Who Owns America's Past? examines the different ways that the Smithsonian's exhibitions have been conceived and designed—whether to educate visitors, celebrate an important historical moment, or satisfy donor demands or partisan agendas. Combining information from hitherto-untapped archival sources, extensive interviews, a thorough review of the secondary literature, and considerable personal experience, Post gives the reader a behind-the-scenes view of disputes among curators, academics, and stakeholders that were sometimes private and at other times burst into headline news.

aviation history anne millbrooke: Texas Takes Wing Barbara Ganson, 2014-01-01 A history of aviation in Texas that "brilliantly demonstrates the evolution of flight technology as a harbinger of social change" (Technology and Culture). In this book, pilot and historian Barbara Ganson brings to life the colorful personalities that shaped the phenomenally successful development of the aviation industry in the Lone Star state. Weaving stories and profiles of aviators, designers, manufacturers, and those in related services, Texas Takes Wing covers the major trends that propelled Texas to the forefront of the field. Covering institutions from San Antonio's Randolph Air Force Base (the West Point of this branch of service) to Brownsville's airport with its Pan American Airlines instrument flight school (which served as an international gateway to Latin America as early as the 1920s) to Houston's Johnson Space Center, home of Mission Control for the US space program, the book provides an exhilarating timeline and engaging history of dozens of unsung pioneers as well as their more widely celebrated peers. Drawn from personal interviews as well as major archives and the collections of several commercial airlines, including American, Southwest, Braniff, Pan American Airways, and Continental, this sweeping history captures the story of powered flight in Texas since 1910. With its generally favorable flying weather, flat terrain, and wide-open spaces, Texas has more airports than any other state and is often considered one of America's most aviation-friendly places. Texas Takes Wing also explores the men and women who made the region pivotal in military training, aircraft manufacturing during wartime, general aviation, and air servicing of the agricultural industry. The result is a soaring history that will delight aviators and passengers alike. Includes photos

aviation history anne millbrooke: Abbreviations, Acronyms, and Alphabets of Aviation

Anne Millbrooke, 2008-11-26 Intended for anyone who reads aviation literature, this guide contains over 12,000 shorthand expressions used in aviation, past and present. The coverage is inclusive of general and technical terms, civil and military, also aeronautical, bureaucratic, commercial, geographical, mechanical, medical, meteorological, operational, and organizational terms — as related to aviation. All the abbreviations, acronyms, and alphabets — contractions or shorthand expressions, including mnemonics and even codes — were found in current and past aviation literature, including articles, books, charts, handbooks, manuals, maps, placards, weather reports, and notices to airmen. Often terms appeared without definition, in the apparent assumption that the meaning was general knowledge, and it may have been to the intended audience at that time. Many of the expressions stand for more than one thing, like MEL being minimum equipment list or multi-engine landplane. TC could be top of cylinder, training center, Trans Caribbean Airways, Transport Canada, transportation corps, troop carrier, tropical cyclone, true course, turbocharged, turn coordinator, or type certificate — depending upon the context. Annotations in this volume are to help identify context. Some annotations place terms in time; for example, when did AFCC refer to the Air Force Combat Command, when to the Air Force Communications Command, and when to Air Force Cyberspace Command?

aviation history anne millbrooke: A Invenção Da Vida: Rodrigo Costa, 2017-12-11 Todo mundo já se deparou com a pergunta de como a vida teria surgido. Ao longo do tempo, muitas teorias científicas trouxeram algumas explicações sobre a origem da vida. Porém em nenhuma delas encaixaria um ser inteligente, já que toda a vida surgiu de uma sucessão de acidentes e não propositalmente. Nos últimos dois séculos, grandes invenções revolucionaram a vida cotidiana das pessoas como o carro, o avião, o telefone, os computadores e a internet. Tais inventos teriam surgido do acaso ou por um planejamento? A partir dessa questão, o livro A invenção da vida: acaso ou finalidade? irá desvendar se esses inventos podem ser comparados aos mecanismos dos seres vivos, se surgiram acidentalmente ou se houve uma inteligência por trás.

aviation history anne millbrooke: Social Networks in the History of Innovation and Invention Francis C. Moon, 2013-11-19 This book integrates history of science and technology with modern social network theory. Using examples from the history of machines, as well as case studies from wireless, radio and chaos theory, the author challenges the genius model of invention. Network analysis concepts are presented to demonstrate the societal nature of invention in areas such as steam power, internal combustion engines, early aviation, air conditioning and more. Using modern measures of network theory, the author demonstrates that the social networks of invention from the 19th and early 20th centuries have similar characteristics to modern 21st C networks such as the World Wide Web. The book provides evidence that exponential growth in technical innovation is linked to the growth of historical innovation networks.
