community simon schuster: Better Together Robert D. Putnam, Lewis Feldstein, 2009-12-01
In his acclaimed bestselling book, *Bowling Alone: The Collapse and Revival of American Community*, Robert Putnam described a thirty-year decline in America's social institutions. The book ended with the hope that new forms of social connection might be invented in order to revive our communities. In *Better Together*, Putnam and longtime civic activist Lewis Feldstein describe some of the diverse locations and most compelling ways in which civic renewal is taking place today. In response to civic crises and local problems, they say, hardworking, committed people are reweaving the social fabric all across America, often in innovative ways that may turn out to be appropriate for the twenty-first century. *Better Together* is a book of stories about people who are building communities to solve specific problems. The examples Putnam and Feldstein describe span the country from big cities such as Philadelphia, San Francisco, and Chicago to the Los Angeles suburbs, small Mississippi and Wisconsin towns, and quiet rural areas. The projects range from the strictly local to that of the men and women of UPS, who cover the nation. *Bowling Alone* looked at America from a broad and general perspective. *Better Together* takes us into Catherine Flannery's Roxbury, Massachusetts, living room, a UPS loading dock in Greensboro, North Carolina, a Philadelphia classroom, the Portsmouth, New Hampshire, naval shipyard, and a Bay Area Web site. We meet activists driven by their visions, each of whom has chosen to succeed by building community: Mexican Americans in the Rio Grande Valley who want paved roads, running water, and decent schools; Harvard University

clerical workers searching for respect and improved working conditions; Waupun, Wisconsin, schoolchildren organizing to improve safety at a local railroad crossing; and merchants in Tupelo, Mississippi, joining with farmers to improve their economic status. As the stories in *Better Together* demonstrate, bringing people together by building on personal relationships remains one of the most effective strategies to enhance America's social health.

community simon schuster: *Handbook of Community Movements and Local Organizations* Ram A. Cnaan, Carl Milofsky, 2007-12-18 Although the way associations and the organization of local social life are intertwined is one of the oldest approaches to community study, the way citizens and residents come together informally to act and solve problems has rarely been a primary focus. Associations are central to important and developing areas of social theory and social action. This handbook takes voluntary associations as the starting point for making sense of communities. It offers a new perspective on voluntary organizations and gives an integrated, yet diverse, theoretical understanding of this important aspect of community life.

community simon schuster: *Virtual Communities* Felicia Wu Song, 2009 Does contemporary Internet technology strengthen civic engagement and democratic practice? The recent surge in online community participation has become a cultural phenomenon enmeshed in ongoing debates about the health of American civil society. But observations about online communities often concentrate on ascertaining the true nature of community and democracy, typically rehearsing familiar communitarian and liberal perspectives. This book seeks to understand the technology on its own terms, focusing on how the technological and organizational configurations of online communities frame our contemporary beliefs and assumptions about community and the individual. It analyzes key structural features of thirty award-winning online community websites to show that while the values of individual autonomy, egalitarianism, and freedom of speech dominate the discursive content of these communities, the practical realities of online life are clearly marked by exclusivity and the demands of commercialization and corporate surveillance. Promises of social empowerment are framed within consumer and therapeutic frameworks that undermine their democratic efficacy. As a result, online communities fail to revolutionize the civic landscape because they create cultures of membership that epitomize the commodification of community and public life altogether.

community simon schuster: *Authoritative Communities* Kathleen Kovner Kline, 2007-11-25 *Authoritative Communities: The Scientific Case for Nurturing the Whole Child* introduces innovative solutions based firmly in the children's mental health and resilience literature and in the hypothesis that humans are hardwired to connect. These authoritative communities consist of such individuals and institutions as parents, teachers, coaches, elders, and a variety of organizations that are committed to each other's well-being over the long-term and who instill children with prosocial values such as empathy and compassion. Living within these communities enables children and youth to develop a consistent sense of purpose and meaning, so that they, in turn, are able to grow up to be responsible, productive, and nurturing adults. The comprehensive coverage in this volume bring new insights and evidence to the nature/nurture debate from developmental, attachment, neurobiological, spiritual, and community perspectives, including: Nurturing as a protective factor against genetic predispositions. Counteracting the adverse influence of the media on children. Promoting a sense of community in disadvantaged youth. Spiritual approaches, from the Buddhist minding children with mindfulness to traditional young men's rites of passage. Adolescent development, from psychobiology to the formation of conscience. Dispatches from the civil society movement, the School Development Program, and the motherhood movement. This volume is

essential reading for researchers and practitioners as well as graduate-level students in developmental, clinical, and social psychology as well as related fields such as sociology, social work, education, and religious studies.

community simon schuster: *Developing Communities for the Future* 5ed Susan Kenny, Phil Connors, 2016-09-01 *Developing Communities for the Future* provides a comprehensive introduction to the theory, processes and practices of community development. It offers insights into the challenges and dilemmas of this demanding field and considers the ways in which it can empower citizens. Engaging case studies illustrate how community development practitioners operate in everyday situations. This new edition highlights cutting-edge issues and new technologies that are influencing practice. It demonstrates the dynamic nature of the field and how practitioners can help communities respond to the current challenges they face.

community simon schuster: *Forging African Communities* Oliver Bakewell, Loren B. Landau, 2017-11-22 This book draws renewed attention to migration into and within Africa, and to the socio-political consequences of these movements. In doing so, it complements vibrant scholarly and political discussions of migrant integration globally with innovative, interdisciplinary perspectives focused on migration within Africa. It sheds new light on how human mobility redefines the meaning of home, community, citizenship and belonging. The authors ask how people's movements within the continent are forging novel forms of membership while catalysing social change within the communities and countries to which they move and which they have left behind. Original case studies from across Africa question the concepts, actors, and social trajectories dominant in the contemporary literature. Moreover, it speaks to and challenges sociological debates over the nature of migrant integration, debates largely shaped by research in the world's wealthy regions. The text, in part or as a whole, will appeal to students and scholars of migration, development, urban and rural transformation, African studies and displacement.

community simon schuster: *Planning for Healthy Communities* Joongsob Kim, 2025-09-16 This book investigates multi-disciplinary approaches to addressing the health of disadvantaged communities through equitable community development systems (CDSs). The core concepts underlying the book are three dimensions of support infrastructure (people: human-centering; place: place-cultivating; and ecosystem: sustainable capitalization), leveraging several theories (community capital, social justice) from community development. This book is based on the results of a recent grassroots, citywide engagement-driven initiative in Detroit, and on best-practice case studies in Chicago, Indianapolis, Cleveland, Boston, Philadelphia, Minneapolis, Richmond, and Portland. The initiative's significant outcomes include a consensus—bolstered by those case studies—on seven components deemed essential to an equitable system for community development. This book proposes that the CDS can enhance community health if at least the following requirements are met: (1) adoption of a community-vitality framework as a citywide shared narrative; (2) coordination across financial institutions to allocate funds equitably to underserved communities; and (3) implementation of system governance with stronger attention to resident voices. This book demonstrates that bottom-up CDSs can and should be leveraged to enhance the health of underserved communities and investigates how best to address the three requirements to make the equitable system-based approach work effectively in practice. The audience of community development and community health actors will learn from Detroit and the case studies—offering lessons for other cities facing similar issues—how to leverage equitable CDSs to promote healthy communities.

community simon schuster: *Restoring Safe School Communities* Brenda Morrison, 2007 *Restoring Safe School Communities: a whole school response to bullying, violence and alienation* introduces a whole school approach to addressing the problems of bullying and violence in schools. Author Brenda Morrison proposes a continuum of responsive and restorative practices for building safe school communities. The first, most proactive, level of practices aims to develop all students' social and emotional competencies, to enable students to resolve their differences in caring and respectful ways. The second level of practices widens the circle of care around the participants.

Typically this level of response occurs when the problem has become more protracted or has involved (and affected) a larger number of people, and involves other members of the school community stepping in to assist in the resolution of the conflict or concern. The third and final level of practices involves the participation of an even wider cross-section of the school community, including parents, guardians, social workers, and others who have been affected. This tertiary level of intervention is normally only used for serious incidents within the school. Morrison explains the thinking behind the suggested responses and shows how they can be implemented by practices such as a responsible citizen program and restorative justice circles and conferences.

community simon schuster: Communities and Technologies 2005 Peter van den Besselaar, Giorgio de Michelis, Jenny Preece, Carla Simone, 2005-06-06 This book includes 23 papers dealing with the impact of modern information and communication technologies that support a wide variety of communities: local communities, virtual communities, and communities of practice, such as knowledge communities and scientific communities. The volume is the result of the second multidisciplinary Communities and Technologies Conference, a major event in this emerging research field. The various chapters discuss how communities are affected by technologies, and how understanding of the way that communities function can be used in improving information systems design. This state of the art overview will be of interest to computer and information scientists, social scientists and practitioners alike.

community simon schuster: Faith, Family, and Filipino American Community Life Stephen M. Cherry, 2014-01-03 Stephen M. Cherry draws upon a rich set of ethnographic and survey data, collected over a six-year period, to explore the roles that Catholicism and family play in shaping Filipino American community life. From the planning and construction of community centers, to volunteering at health fairs or protesting against abortion, this book illustrates the powerful ways these forces structure and animate not only how first-generation Filipino Americans think and feel about their community, but how they are compelled to engage it over issues deemed important to the sanctity of the family. Revealing more than intimate accounts of Filipino American lives, Cherry offers a glimpse of the often hidden but vital relationship between religion and community in the lives of new immigrants, and allows speculation on the broader impact of Filipino immigration on the nation. The Filipino American community is the second-largest immigrant community in the United States, and the Philippines is the second-largest source of Catholic immigration to this country. This ground-breaking study outlines how first-generation Filipino Americans have the potential to reshape American Catholicism and are already having an impact on American civic life through the engagement of their faith.

community simon schuster: Building Communities through Food David F. Purnell, 2019-06-28 Building Communities through Food: Strengthening Communication, Families, and Social Capital examines the power of food as a communicative tool to bring people of diverse backgrounds together. David F. Purnell argues that food enables people to look past their differences and focus on their similarities, thus creating a stronger sense of community via the sharing of a meal. The preparation, presentation, and ingredients of meals reflect a concrete representation of our individual identities and offer others an opportunity to share and take part in those identities. Scholars with an interest in family communication, interpersonal communication, and sociology will find this book especially useful.

community simon schuster: Communities in Cyberspace Peter Kollock, Marc Smith, 2002-06-01 This wide-ranging introductory text looks at the virtual community of cyberspace and analyses its relationship to real communities lived out in today's societies. Issues such as race,

gender, power, economics and ethics in cyberspace are grouped under four main sections and discussed by leading experts: * identity * social order and control * community structure and dynamics * collective action. This topical new book displays how the idea of community is being challenged and rewritten by the increasing power and range of cyberspace. As new societies and relationships are formed in this virtual landscape, we now have to consider the potential consequences this may have on our own community and societies. Clearly and concisely written with a wide range of international examples, this edited volume is an essential introduction to the sociology of the internet. It will appeal to students and professionals, and to those concerned about the changing relationships between information technology and a society which is fast becoming divided between those on-line and those not.

community simon schuster: Economic Development for Everyone Mark M. Miller, 2017-05-09 How do we create employment, grow businesses, and build greater economic resilience in our low-income communities? How do we create economic development for everyone, everywhere – including rural towns, inner-city neighborhoods, aging suburbs, and regions such as Appalachia, American Indian reservations, the Mexican border, and the Mississippi Delta – and not just in elite communities? *Economic Development for Everyone* collects, organizes, and reviews much of the current research available on creating economic development in low-income communities. Part I offers an overview of the harsh realities facing low-income communities in the US today; their many economic and social challenges; debates on whether to try reviving local economies vs. relocating residents; and current trends in economic development that emphasize high-tech industry and high levels of human capital. Part II organizes the sprawling literature of applied economic development research into a practical framework of five dynamic dimensions: empower your residents: begin with basic education; enhance your community: build on existing assets; encourage your entrepreneurs; diversify your economy; and sustain your development. This book, assembled and presented in a unified framework, will be invaluable for students and new researchers of economic development in low-income communities, and will offer new perspectives for established researchers, professional economic developers and planners, and public officials. Development practitioners and community leaders will also find new ideas and opportunities, along with a broad view on how the many complex parts of economic development interconnect.

community simon schuster: Wildfire and Power Peter Fairbrother, Meagan Tyler, 2018-10-09 This book brings together perspectives from sociology, political science, gender studies, and history to produce new ways of analysing wildfire preparedness and policy in Australia. Drawing on data from hundreds of interviews with residents, volunteers and emergency services professionals living and working in wildfire-prone areas, the authors focus on issues of power and inequality, the contested nature of community and the relationship between citizens and the state. The book questions not only existing policy approaches, but also the central concepts on which they are founded. In doing so, the aim is to create a more conceptually robust and academically contextualised discussion about the limitations of current wildfire policy approaches in Australia and to provide further evidence of the need for disaster studies to engage with a variety of social science approaches. *Wildfire and Power: Policy and Practice* will be of most interest to higher degree by research students, other academics and policy makers examining the evolving patterns and politics of work, employment, management and industrial relations as well as those involved in emergency and disaster management service delivery. It would be most suited to academic and public libraries as well as organisations in the field of emergency and disaster management.

New material on topics such as negotiation and mediation, community advocacy, participatory rural appraisal, the narrative approach to social change, community involvement, representative client boards, and the latest in grassroots endeavors make this text as inspiring as it is practical. Drawing upon the wealth of information available from local organizations, the Internet, newspapers, and academic journals, the authors introduce contemporary experiments and analyze classic modes of community practice and change. The content, exercises, and references offer instructors the flexibility necessary to tailor their courses to undergraduate, graduate, and doctoral level students.
