cnn 10 vocabulary: **Speak Not** James Griffiths, 2021-10-21 A New Yorker Best Book of 2022 A Globe & Mail Book of the Year A stimulating work on the politics of language. LA Review of Books As globalisation continues languages are disappearing faster than ever, leaving our planet's linguistic diversity leaping towards extinction. The science of how languages are acquired is becoming more advanced and the internet is bringing us new ways of teaching the next generation, however it is increasingly challenging for minority languages to survive in the face of a handful of hegemonic 'super-tongues'. In *Speak Not*, James Griffiths reports from the frontlines of the battle to preserve minority languages, from his native Wales, Hawaii and indigenous American nations, to southern China and Hong Kong. He explores the revival of the Welsh language as a blueprint for how to ensure new generations are not robbed of their linguistic heritage, outlines how loss of indigenous languages is the direct result of colonialism and globalisation and examines how technology is both hindering and aiding the fight to prevent linguistic extinction. Introducing readers to compelling characters and examining how indigenous communities are fighting for their languages, Griffiths ultimately explores how languages hang on, what happens when they don't, and how indigenous tongues can be preserved and brought back from the brink.

cnn 10 vocabulary: Multidimensional Mining of Massive Text Data Chao Zhang, Jiawei Han, 2022-06-01 Unstructured text, as one of the most important data forms, plays a crucial role in data-driven decision making in domains ranging from social networking and information retrieval to scientific research and healthcare informatics. In many emerging applications, people's information need from text data is becoming multidimensional—they demand useful insights along multiple aspects from a text corpus. However, acquiring such multidimensional knowledge from massive text data remains a challenging task. This book presents data mining techniques that turn unstructured text data into multidimensional knowledge. We investigate two core questions. (1) How does one identify task-relevant text data with declarative queries in multiple dimensions? (2) How does one distill knowledge from text data in a multidimensional space? To address the above questions, we develop a text cube framework. First, we develop a cube construction module that organizes unstructured data into a cube structure, by discovering latent multidimensional and multi-granular structure from the unstructured text corpus and allocating documents into the structure. Second, we develop a cube exploitation module that models multiple dimensions in the cube space, thereby distilling from user-selected data multidimensional knowledge. Together, these two modules constitute an integrated pipeline: leveraging the cube structure, users can perform multidimensional, multigranular data selection with declarative queries; and with cube exploitation algorithms, users can extract multidimensional patterns from the selected data for decision making. The proposed framework has two distinctive advantages when turning text data into multidimensional knowledge: flexibility and label-efficiency. First, it enables acquiring multidimensional knowledge flexibly, as the cube structure allows users to easily identify task-relevant data along multiple dimensions at varied granularities and further distill multidimensional knowledge. Second, the algorithms for cube construction and exploitation require little supervision; this makes the framework appealing for many applications where labeled data are expensive to obtain.
