Purpose and Development

Developed by Dr. John Delony, a licensed therapist and mental health advocate, the quiz incorporates evidence-based criteria commonly used in clinical settings. It was created to bridge the gap between professional mental health assessment and self-evaluation, empowering users with immediate feedback. The quiz also serves as a resource for identifying when professional help might be necessary, encouraging timely intervention.

Target Audience

The quiz is suitable for a broad audience, including adults and young adults who suspect they might be experiencing anxiety. It is particularly useful for those who have not yet sought professional evaluation but want to understand their symptoms better. Additionally, mental health professionals may recommend the quiz as a supplementary tool for clients to monitor their progress.

How the Anxiety Quiz Works

The Dr. John Delony anxiety quiz consists of a series of carefully formulated questions designed to evaluate the frequency and intensity of anxiety-related symptoms. These questions focus on emotional states, physical sensations, thought patterns, and behavioral responses commonly associated with anxiety disorders. The quiz is typically completed online and takes approximately 5 to 10 minutes to finish.

Question Structure

The quiz uses multiple-choice questions with scaled responses, such as “Never,” “Sometimes,” “Often,” and “Always.” This scale allows for nuanced self-reporting of symptoms and helps generate a detailed profile of the individual’s anxiety level. Questions may address topics such as worry, restlessness, sleep disturbances, and physical manifestations like increased heart rate.

Scoring and Assessment

Once completed, the quiz assigns a score based on the responses, categorizing anxiety severity into different levels, such as mild, moderate, or severe. This scoring system is designed to help users understand the intensity of their symptoms and consider appropriate next steps. It is important to note that the quiz results are not a substitute for professional diagnosis but rather an informative guide.
