dr iris online courses: Handbook of Remote Biometrics Massimo Tistarelli, Stan Z. Li, Rama Chellappa, 2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people. Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements, scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements. One of the main limitations of the precursors of today's biometrics, which is still present in the vast majority of the existing biometric systems, has been the need to keep the device in close contact with the subject to capture the biometric measurements. This clearly limits the applicability and convenience of biometric systems. This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance. Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero, Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics (IAPR TC4). The last four chapters of the book are derived from some of the best presentations by the participating students of the school. The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics.

dr iris online courses: *The SAGE Handbook of E-learning Research* Caroline Haythornthwaite, Richard Andrews, Jude Fransman, Eric M. Meyers, 2016-05-09 The new edition of The SAGE Handbook of E-Learning Research retains the original effort of the first edition by focusing on research while capturing the leading edge of e-learning development and practice. Chapters focus on areas of development in e-learning technology, theory, practice, pedagogy and method of analysis. Covering the full extent of e-learning can be a challenge as developments and new features appear daily. The editors of this book meet this challenge by including contributions from leading researchers in areas that have gained a sufficient critical mass to provide reliable results and practices. The 25 chapters are organised into six key areas: 1. THEORY 2. LITERACY & LEARNING 3. METHODS & PERSPECTIVES 4. PEDAGOGY & PRACTICE 5. BEYOND THE CLASSROOM 6. FUTURES

dr iris online courses: *Driving Innovation With For-Profit Adult Higher Education Online Institutions* Stein, David, Glazer, Hilda R., Wanstreet, Constance, 2022-01-14 The emergence of remote and for-profit universities has provided increased opportunities for adult learners to obtain higher education degrees in a technologically-dependent teaching-learning environment. During the pandemic, for-profit online learning institutions experienced increases in enrollment while face-to-face institutions experienced a decrease. Higher education accreditation bodies have legitimized distance learning virtual universities as sites for adult learners, especially part-time adult learners, and made distance education an accepted way to receive a higher education degree. *Driving Innovation With For-Profit Adult Higher Education Online Institutions* focuses on teaching and learning in distance learning remote universities. This book explores, describes, and questions the role of these institution in the higher education landscape. This publication examines the ideas, programs, student services, and curriculum innovations that created the space for the for-profit distance education university to become a competitive force in the higher education marketplace. Covering topics such as driving achievement, internships, and part-time faculty, this book is an essential resource for university leaders, administrators, faculty, student services leadership and staff, higher education historians and researchers, accreditors and regulators, and academicians.

dr iris online courses: *Early Modern Translation and the Digital Humanities* Hilary Brown, Regina Toepfer, Jörg Wesche, 2025-07-02 This open-access volume explores how digital resources and methods can be usefully employed for research on early modern translation. The volume focuses mainly on digital resources, and features a number of chapters on translation-specific resources written by members of the teams leading the projects. The resources presented here encompass translations into and/or out of Greek, Latin, the European vernaculars, and Jewish languages (Hebrew, Yiddish, Ladino and Judeo-Italian) and different corpora including plays, encyclopedias, and 'radical' texts. While the use of digital methods to analyse early modern translations is still in its early stages, the volume also considers how methods such as data visualisation could shed new light on translation phenomena.

dr iris online courses: **A History of Women in Psychology and Neuroscience** Dale DeBakcsy, 2024-09-30 Since virtually its first moments as an academic science, women have played a major role in the development of psychology, gaining from the outset research opportunities and academic positions that had been denied them for centuries in other branches of scientific investigation. Look wherever you will, in any branch of psychology or neuroscience in the last century and a half, and what you will find are a plethora of women whose discoveries fundamentally changed how we view the brain and its role in the formation of our perceptions and behaviors. A History of Women in Psychology and Neuroscience tells the story of 267 women whose work opened new doors in humanity's ongoing attempt to learn about its own nature, from Christine Ladd Franklin's late 19th century studies of how the brain perceives color to Virginia Johnson's pioneering studies of the human sexual response, and Augusta Dejerine-Klumpke's early association of neurological conditions with their underlying brain regions to May-Britt Moser's Nobel-winning discovery a century later of the grid cells that allow us to mentally model our surroundings. Here are the stories of when and how we learned how memories are formed, what role an enriched environment plays in mental development, why some individuals are better able to cope with chronic stress than others, how societal stereotypes unconsciously feed into our daily interactions with other people, what role evolution might have played in the formation of our social habits, what light the practices of sign language might shed on our brain's basic capacity for language, how children internalize the violence they experience from others, and hundreds of other tales of the women who dug deep into the structures of the human mind to uncover, layer by layer, the answers to millennia-old questions of what humans are, and why they behave as they do.
