dr pompa boca raton: Historical and Archaeological Perspectives on the Itzas of Petén, Guatemala Prudence M. Rice, Don S. Rice, 2018-03-01 Historical and Archaeological Perspectives on the Itzas of Petén, Guatemala is the first exhaustively detailed and thorough account of the Itzas—a Maya group that dominated much of the western lowland area of tropical forest, swamps, and grasslands in Petén, Guatemala. Examining archaeological and historical evidence, Prudence Rice and Don Rice present a theoretical perspective on the Itzas' origins and an overview of the

social, political, linguistic, and environmental history of the area; explain the Spanish view of the Itzas during the Conquest; and explore the material culture of the Itzas as it has been revealed in recent surveys and excavations. The long but fragmented history of the Petén Itzas requires investigation across multiple periods and regions. Chapters in this six-part overview interweave varying data pertaining to this group—archaeological, artifactual, indigenous textual, Spanish historical—from multiple languages and academic fields, such as anthropology, archaeology, linguistics, ecology, and history. Part I introduces the lowland Itzas, northern and southern, with an emphasis on those of the central Petén lakes area. Part II discusses general Itza origins and identities in the Epiclassic period, while part III reviews Spanish perceptions and misconceptions of the Petén Itzas in their Contact-period writings. With these temporal anchors, parts IV and V present the archaeology and artifacts of the Petén Itzas, including pottery, architecture, and arrow points, from varied sites and excavations but primarily focusing on the island capital of Tayza/Nojpetén. Part VI summarizes key data and themes of the preceding chapters for a new understanding of the Petén Itzas. A companion volume to *The Kowoj*—a similar treatment of the Petén Itzas' regional neighbors—*Historical and Archaeological Perspectives on the Itzas of Petén, Guatemala* demonstrates the unique physical, cultural, and social framework that was home to the Petén Itza, along with their backstory in northern Yucatán. Archaeologists, historians, art historians, and geographers who specialize in the Maya and the Postclassic, Contact, and Colonial periods will find this book of particular interest. dr pompa boca raton: Water Availability and Management in Mexico Elena María Otazo-Sánchez, Amado Enrique Navarro-Frómata, Vijay P. Singh, 2019-09-28 This book presents several complex case studies related to water management and planning in the context of pollution,

growing demands, and global climate change in Mexico, but which are also relevant for other countries in Latin America. These concerns are of critical importance for policymakers who are coping with multiple conflicting interests. Water availability in Mexico is polarized, with abundant rainfall and large rivers in the south, and desert-like conditions in the north. The central region, which is the most industrialized, is overpopulated. Mexico City pours millions of cubic meters of “blackwater” into the northern valley daily and receives its clean water from the south. To address these unsustainable conditions, the world's 4th biggest water treatment plant went into operation in 2018. The water infrastructure and governance must satisfy the demands of all sectors, including agricultural, urban, and economic activities. At the same time, water resources are affected by drought, and climate change puts constraints on the supply. As such, regulation and monitoring are important when it comes to adherence to agreed plans and priorities. The book is divided into four sections. 1: Water Availability discusses quantitative aspects, such as supply, methods of calculation, and fracking. 2: Water Quality highlights pollution risks and diagnosis of water resources. 3: Water Allocation examines the sectoral demands and vulnerability due to unsustainable irrigation. 4: Water Governance and Management focuses on laws, urban rules, national parks, planning, and integrated water resources management, among other topics. The chapters include illustrative case studies in Mexico, such as basins, cities, reservoirs, and aquifers, water supply demand assessment, planning, and management.

dr pompa boca raton: *p53 Protocols* Sumitra Deb, Swati Palit Deb, 2008-02-02 Since the discovery of p53 as a tumor suppressor, numerous methods have evolved to reveal the unique structural features and biochemical functions of this protein. Several unique properties of p53 posed a challenge to understanding its normal function in the initial phase of its research. The low levels of p53 in normal cells, its stabilization under situations of genotoxic stress, induction of growth arrest, and apoptosis with stabilization of the protein, obstructed the visibility of its normal, unmutated function. The property of p53 that can sense a promoter and transactivate or inhibit is still not well understood. It is still not known whether it is the absence of the protein that causes tumorigenesis, or if its mutants have a dominant role in inducing cancer. p53 Protocols comprises eighteen chapters for the study of the diverse properties of p53 and related proteins. The methods included are invaluable for delineating the function of other proteins that may function as tumor suppressors or growth suppressors. The chapters are not presented in any schematic order, for the importance and diversity of the functions of p53 make it impossible to organize them suitably. We have made a sincere effort to collect the methods most useful to those investigators working on tumor suppressors or growth suppressors. The purpose of p53 Protocols is not only to provide investigators with methods to analyze similar biochemical functions, but also to familiarize them with the associated problems that arose during the course of investigations.

Han, 2010-12-30 Modified Atmosphere Packaging for Fresh-cut Fruits and Vegetables provides comprehensive coverage of all aspects of modern MAP technologies for fresh-cut fruits and vegetables. Coverage begins with the general MAP concept and application by introducing the concept of MAP, how MAP works for fresh-cut produce and the benefits and shortfalls of MAP in its application. The book then discusses the basic aspects of MAP - packaging materials and machinery. In these sections, the book addresses not only the general

information about MAP materials, but also supplies examples to introduce the new packaging films and their successful application in produce and fresh-cut fruits and vegetables. Unique chapters and sections in the book include relevant patents for MAP, commercial practices and MAP packaging machinery. Generally, packaging machinery is only included in books specifically covering packaging engineering. Coverage of this important aspect is included in the book since fresh-cut manufacturers spend much more time in the day-to-day operations on packaging machinery and systems as compared to packaging film materials. In the final section, Modified Atmosphere Packaging for Fresh-cut Fruits and Vegetables highlights the latest developments in the packaging industry and how they could impact the fresh-cut industry.

dr pompa boca raton: New Vistas in Agroforestry P. K. Ramachandran Nair, M.R. Rao, L.E. Buck, 2013-03-09 It was in late 2002 that the idea of preparing a collection of multi-authored chapters on different aspects of ag- st forestry as a compendium for the 1 World Congress of Agroforestry, June 2004, was tossed around. With the approval of the idea by the Congress Organizing Committee, serious efforts to make it a reality got under way in early 2003. The rigorously peer-reviewed and edited manuscripts were submitted to the publisher in December 2003. Considering the many different individuals involved in the task as authors and manuscript reviewers, we feel quite pleased that the task could be accomplished within this timeframe. We are pleased also about the contents on several counts. First of all, the tropical-temperate mix of topics is a rare feature of a publication of this nature. In spite of the scientific commonalities between tropical and temperate practices of agroforestry, the differences between them are so enormous that it is often impossible to mesh them together in one publication. Secondly, several of the chapters are on topics that have not been discussed or described much in agroforestry literature. A third feature is that some of the authors, though well known in their own disciplinary areas, are somewhat new to agroforestry; the perceptions and outlooks of these scholars who are relatively uninfluenced by the past happenings in agroforestry gives a whole new dimension to agroforestry and broaden the scope of the subject. Finally, rather than just reviewing and summarizing past work, most chapters take the extra effort in attempting to outline the next steps.

Numbering fewer than 300 men, women, and children, this community is the most culturally conservative of the

Mayan groups. Protected by their hostile environment, over many centuries they maintain autonomy from the outside forces of church and state, while they continue to draw on the forest for spiritual inspiration and sustenance. In *The Forest of the Lacandon Maya: An Ethnobotanical Guide*, linguist Suzanne Cook presents a bilingual Lacandon-English ethnobotanical guide to more than 450 plants in a tripartite organization: a botanical inventory in which main entries are headed by Lacandon names followed by common English and botanical names, and which includes plant descriptions and uses; an ethnographic inventory, which expands the descriptions given in the botanical inventory, providing the socio-historical, dietary, mythological, and spiritual significance of most plants; and chapters that discuss the relevant cultural applications of the plants in more detail provide a description of the area's geography, and give an ethnographic overview of the Lacandones. Active links throughout the text to original audio-video recordings demonstrate the use and preparation of the most significant plants.
