dr chemistry class online: Understanding Online Instructional Modeling: Theories and Practices Zheng, Robert Z., Ferris, Sharmila Pixy, 2007-10-31 Higher education is currently undergoing significant changes, and conditions in higher education reflect changing financial, social, and political conditions, which affect both faculty and students. Both the rising costs of education and changes from brick-and-mortar to technologically-driven programs often lead to a change from the traditional space-and-time bound institution to ones that offer cost-effective technologically enhanced programs. Online learning has become an integral and expansive factor in higher education—both in distance learning and as an adjunct to the traditional classroom. Understanding Online Instructional Modeling: Theories and Practices focuses on both theoretical and practical aspects of online learning by introducing a variety of online instructional models as well as best practices that help educators and professional trainers to better understand the dynamics of online learning.

dr chemistry class online: Online Science Learning: Best Practices and Technologies Downing, Kevin, Holtz, Jennifer, 2008-05-31 The continued growth in general studies and liberal arts and science programs online has led to a rise in the number of students whose science learning experiences are web-based. However, little is known about what is actually going on in web-based science courses at the level of the disciplines within liberal arts and sciences or the corresponding course design features. Online Science Learning: Best Practices and Technologies reviews trends and efforts in web-based science instruction and evaluates contemporary philosophies and pedagogies of online science instruction. This title on an emergent and vital area of education clearly demonstrates how to enrich the academic character and quality of web-based science instruction.

dr chemistry class online: Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments Durak, Gürhan, Çankaya, Serkan, 2021-12-17 In order to be successful, online learning should be planned systematically. It can be said that offering distance education courses without preparation and knowledge about the theoretical background can cause drawbacks. While distance education has become widespread and popular, it is observed that there could be problems in its application. Such problems can include technical problems, inability to meet the learning needs at the learners' own speeds, lack of communication among learners and between learners and teachers, and lack of quality materials appropriate for online learning or the inclusion of materials used in traditional methods directly into online learning. For successful online courses, these critical aspects of distance education are important, and they should be taken into account by the institutions and the instructors offering online courses. The Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments provides up-to-date knowledge and experiences regarding technologies, processes,

and environments for online course design in distance education systems and covers topics related to the aspects of successful distance education systems with a focus on teaching and learning in online environments. Focusing on topics such as instructional design and integrated systems, it is an ideal guide for online course designers, instructional designers, curricula developers, administrators, educators, researchers, trainers, and students.

dr chemistry class online: Basics of Biochemistry Dr. Sravanthi Malempati, Dr. Madhuri Singhal, Dr. Pankaj Ramesh Gavit, Dr. G. Satyanarayana, 2023-01-17 The study of the chemical components of living things is known as biochemistry, which is a branch of chemistry. Important chemical processes that occur inside live creatures are the focus of this field of research, which examines interactions between living organic cells and the fluids or matter around them. Structural, biology, Metabolism, and enzymology are the three subfields of biochemistry that further categories the field. Together, towards the end of the 20th century, these three variations adequately explained the life process. Biology is the study of organisms, including their structure, function, and chemical makeup. The human skeleton and muscular system are also examined. Thus, the study of biochemistry is useful for gaining insight into the molecular interactions between and within living organisms. This, in turn, is connected to our knowledge of the anatomy and physiology of cells, tissues, including organs. Molecular biology which focuses on the underlying molecular processes of biological events might be thought of as another definition of biochemistry.

dr chemistry class online: Evaluating Online Teaching Thomas J. Tobin, B. Jean Mandernach, Ann H. Taylor, 2015-06-02 Create a more effective system for evaluating online faculty Evaluating Online Teaching is the first comprehensive book to outline strategies for effectively measuring the quality of online teaching, providing the tools and guidance that faculty members and administrators need. The authors address challenges that colleges and universities face in creating effective online teacher evaluations, including organizational structure, institutional governance, faculty and administrator attitudes, and possible budget constraints. Through the integration of case studies and theory, the text provides practical solutions geared to address challenges and foster effective, efficient evaluations of online teaching. Readers gain access to rubrics, forms, and worksheets that they can customize to fit the needs of their unique institutions. Evaluation methods designed for face-to-face classrooms, from student surveys to administrative observations, are often applied to the online teaching environment, leaving reviewers and instructors with an ill-fitted and incomplete analysis. Evaluating Online Teaching shows how strategies for evaluating online teaching differ from those used in traditional classrooms and vary as a function of the nature, purpose, and focus of the evaluation. This book guides faculty members and administrators in crafting an evaluation process specifically suited to online teaching and learning, for more accurate feedback and better results. Readers will: Learn how to evaluate online teaching performance Examine best practices for student ratings of online teaching Discover methods and tools for gathering informal feedback Understand the online teaching evaluation life cycle The book concludes with an examination of strategies for fostering change across campus, as well as structures for creating a climate of assessment that includes online teaching as a component. Evaluating Online Teaching helps institutions rethink the evaluation process for online teaching, with the end goal of improving teaching and learning, student success, and institutional results.

dr chemistry class online: Designing Problem-Driven Instruction with Online Social Media Kay Kyeong-Ju Seo, Debra A. Pellegrino, Chalee Engelhard, 2012-02-01 Designing Problem-Driven Instruction with Online Social Media has the capacity to transform an educator's teaching style by presenting innovative ways to empower problem-based instruction with online social media. Knowing that not all instructors are comfortable in this area, this book provides clear, systematic design approaches for instructors who may be hesitant to explore uncharted waters and offers practical examples of how successful implementations can happen. Furthermore, it is a reference for instructors who need to solve issues that occur when developing a class utilizing problem-driven instruction with online social media. With the recent exponential growth of Twitter and Facebook, the potential for social media as an educational venue brings an urgent call for

researchers to increase their concentration in this area to investigate further the educational possibilities of this format. These factors combined illustrate the mission of this book that is to enable instructors in the areas of instructional design, multimedia, information science, technology, and distance learning to have an evidence-based resource for this underexplored niche in instruction.

dr chemistry class online: Unplugging the Classroom Hilary Anne Wilder, Sharmila Pixy Ferris, 2017-05-17 *Unplugging the Classroom: Teaching with Technologies to Promote Students' Lifelong Learning* provides techniques to help teaching and learning in an age where technology untethers instruction from the classroom, from semester seat-time, and from a single source of expertise. The book brings together researchers and practitioners from diverse academic fields, including library perspectives, and presents interdisciplinary discussions from both theoretical and applied areas. It is unique in its goal of bringing educators and librarians together to explore the challenges that are faced by students and faculty in any time, any place, any path, and any pace learning. In spite of the fact that the mobile revolution has definitively arrived, students and faculty alike aren't ready to make the leap to mobile learning. The pressures of technological advances, along with the changing nature of learning, will demand increasingly profound changes in education. Researchers have begun to address this issue, but the revolution in mobile communication has not been accompanied by a concomitant growth in pedagogical resources for educators and students. More importantly, such growth needs to be under-girded by sound learning theories and examples of best practice. - Provides a hands-on resource useful to both novices and experts for technology-enabled teaching and learning - Gives both discipline-specific and cross-disciplinary perspectives - Discusses discipline-specific mobile applications - Offers an opportunity to meet the needs of contemporary learners and foster their competencies as lifelong learners - Addresses emerging issues in technology and pedagogy

dr chemistry class online: Teaching Naked José Antonio Bowen, 2012-07-03 You've heard about flipping your classroom—now find out how to do it! Introducing a new way to think about higher education, learning, and technology that prioritizes the benefits of the human dimension. José Bowen recognizes that technology is profoundly changing education and that if students are going to continue to pay enormous sums for campus classes, colleges will need to provide more than what can be found online and maximize naked face-to-face contact with faculty. Here, he illustrates how technology is most powerfully used outside the classroom, and, when used effectively, how it can ensure that students arrive to class more prepared for meaningful interaction with faculty. Bowen offers practical advice for faculty and administrators on how to engage students with new technology while restructuring classes into more active learning environments.

dr chemistry class online: Handbook of Research on K-12 Blended and Virtual Learning Through the i²Flex Classroom Model Avgerinou, Maria D., Pelonis, Peggy, 2021-03-05 Teaching models that focus on blended and virtual learning have become important during the past year and have become integral for the continuance of learning. The i²Flex classroom model, a variation of blended learning, allows non-interactive teaching activities to take place without teachers' direct involvement, freeing up time for more meaningful teacher-student and student-student interactions. There is evidence that i²Flex leads to increased student engagement and motivation as well as better exploitation of teachers' and classroom time leading to the development of higher order cognitive skills as well as study skills for students' future needs related to citizenship, college, and careers. The Handbook of Research on K-12 Blended and Virtual Learning Through the i²Flex Classroom Model focuses not only on how to design, deliver, and evaluate courses, but also on how to assess teacher performance in a blended i²Flex way at the K12 level. The book will discuss the implementation of the i²Flex (isquareFlex), a non-traditional learning methodology, which integrates internet-based delivery of content and instruction with faculty-guided, student-independent learning in combination with face-to-face classroom instruction aiming at developing higher order cognitive skills within a flexible learning design framework. While highlighting new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers, this publication is an essential reference source for pre-service and in-service teachers, researchers, administrators, educational technology developers, and students interested in how the i²Flex model was implemented in classrooms and the effects of this learning model.

Elizabeth, Kim, Minkyung, 2023-07-03 The COVID-19 pandemic caused the largest systemic disruption in history. The pandemic was a complex phenomenon that impacted economic, political, and education systems. The pandemic had widespread business impacts, having forced many businesses to close, and the world is still impacted by the effects of supply chain disruptions. The pandemic also impacted political systems with disputes over mask mandates, lockdowns, and vaccine distribution. The COVID-19 pandemic further caused the most extensive education system disruption in history. The pandemic has highlighted the world's complex interdependent structures, and it will require a multidisciplinary systems thinking approach for post-pandemic recovery and future pandemic prevention. *Reimagining Systems Thinking in a Post-Pandemic World* examines the role of systems thinking in a post-pandemic world. It identifies effective models of systems thinking and stems design and generates continuous knowledge building on systems thinking by addressing a multitude of industries and service communities. dr chemistry class online: Early Warning Systems and Targeted Interventions for Student Success in Online Courses Glick, Danny, Cohen, Anat, Chang, Chi, 2020-06-26 Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. Early Warning Systems and Targeted Interventions for Student Success in Online Courses is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.
