europaean society of medicine if: The Intensivist's Challenge David Crippen, 2016-05-02 This book brings together personal narratives from critical care medicine specialists around the world. Most of these physicians started in critical care at or before the exponential increase in technological modalities to reverse or sustain organ function, have seen patient care both ways, and have worked as many as 30 years or more at the bedside. The narratives are organized around such themes as : how and why these physicians entered the discipline of critical care; what was critical care like in the beginning; how they have experienced the flood of innovations in critical care; why

they decided to retire (or not); and what their retirement options have been (or not). Composed by influential critical care medicine specialists, *The Intensivist's Challenge: Aging and Career Growth in a High-Stress Medical Specialty* is a valuable resource bringing together a discussion of the nature and problems of aging as they apply to physicians in a high-stress occupation, while assessing the value of clinical experience at the bedside in a world increasingly full of soulless technology.

Clearly structured and written, the present book is a practical tool for physicians and professionals involved in the management and care of patients with combined heart and kidney disorders. Moreover, it also serves as a reference textbook for medical students, residents and fellows dealing in everyday practice with fluid overloaded and oliguric patients.

europaean society of medicine if: *Boundaries and Belonging* Joel S. Migdal, 2004-05-03 This interdisciplinary volume maintains the importance of a spatial understanding of society and history, but suggests a way of conceiving of borders and space that goes beyond a school map of states. Its subject is the struggle among differing spatial logics, or mental maps. It is concerned with the meaning that state borders hold for people, but recognizes that such meaning varies and is contested by other social formations. To what degree do state borders encase the mechanisms that make the decisive rules governing people's lives and to what extent do they give way to other rulemakers? To what extent do states circumscribe the communities to which people feel attached and to what extent do they intersect with other communities of belonging? These essays home in on the struggles and conflicting demands on people, given that state borders are not automatically pre-eminent and that other spatial logics demand attention.
