english accounting terms: Dynamics and Terminology Rita Temmerman, Marc Van Campenhoudt, 2014-12-15 The urge to understand all aspects of human experience more and better seems to be one of the motives underlying cognitive development in many domains of human existence. Understanding more and better is at the basis of knowledge creation and extension. One way of getting access to how understanding comes about and how knowledge is the result of a continuous dynamics of understanding and misunderstanding is by studying the cognitive potential and the development of natural language(s) and more particularly of terminology, in specialized domains. In this volume on dynamics and terminology, thirteen contributors illustrate that human cognition is a dynamic process in a variety of socio-cognitive and cultural settings. The case studies encompass a panoply of methodologies and deal with subjects ranging from the dynamics of legal understanding in multilingual Europe, over financial, economic and scientific terminology in several cultural and linguistic settings, to language policy issues in multilingual environments. All thirteen contributors link the dynamics of cognition to the creative potential of language as a repository of past and present experience in cultural settings and to the creation of neologisms in domain-specific languages. Attention is given to the functionality of indeterminacy, vagueness, polysemy, ambiguity, synonymy, metaphor and phraseology. In this volume terminology is researched and discussed from an interdisciplinary perspective, combining insights developed over the last decades in communicative terminology, socio-terminology, socio-cognitive terminology, cultural terminology, with tools and methods from cognitive linguistics, corpus linguistics, sociolinguistics, frame semantics, semiotics, knowledge engineering and statistics.

english accounting terms: Dictionary Visions, Research and Practice Henrik Gottlieb, Jens Erik Mogensen, 2007-12-12 This book is about dictionaries and dictionary making. In six thematic sections it presents nineteen contributions covering a wide field within lexicography: Online Lexicography, Dictionary Structure, Phraseology in Dictionaries, LSP Lexicography, Dictionaries and the User, plus Etymology, History and Culture in Lexicography. Some chapters focus on theoretical aspects, others report on dictionary work in the making, and still others compare and analyze existing dictionaries. Common to all authors, however, is the concern for the dictionary user. Trivial as it may seem, the fact that dictionaries are meant to fulfill the needs of specific user groups has only recently achieved widespread recognition in the lexicographical literature. This volume shows the many ramifications of this functional approach to lexicography by presenting twenty-two authors representing the state of the art in eleven countries: Canada, Denmark, Germany, Great Britain, Iceland, Israel, Latvia, The Netherlands, Poland, South Africa and Spain.

english accounting terms: Transnational Accounting Dieter Ordelheide, 2016-02-17 Considerable effort has been made over the last ten years by such institutions as the EU, OECD, UNO and the IASC towards the harmonisation of accounting standards. It is recognised though that uniformity and true compatibility of financial instruments cannot be achieved while accounting operates in individual national economic and legal environments. A knowledge of national accounting standards and practice continues to be indispensable for the analysis of financial statements. Transnational Accounting is a unique comparative study of accounting standards of fourteen major economic powers, plus the regimes of the IASC and EU. Each chapter is standardised for easy comparison and written by a recognised expert in his or her country. The Editor, The Late Dieter Ordelheide, was Professor of Business Economics at the Johann Wolfgang Goethe-Universität, Frankfurt am Main. This groundbreaking work enables the reader to develop a thorough practical understanding of national accounting practices and be fully at home with financial statements in an international context. Each volume includes a detailed reference matrix listing approximately 100 key accounting subjects and their treatment across all regulatory and accounting regimes.

This volume looks at, amongst other topics: • Polyfunctional versus monofunctional dictionary tools • Developing theories of lexicography for electronic mediums • Distinguishing between the database and the dictionary • Online dictionaries not as data repositories but as sophisticated search engines This volume will appeal to scholars in lexicography and to practicing lexicographers.

english accounting terms: Theory and Practice of Specialised Online Dictionaries Pedro A. Fuertes-Olivera, Sven Tarp, 2014-09-23 This book is the first comprehensive monograph on the Function Theory of Lexicography, which originated at the Aarhus School of Business (Aarhus University). Function Theory considers dictionaries to be tools that are constructed for assisting specific users with punctual needs in specific usage situations, e.g. communicative-oriented situations and cognitive-oriented situations. The book's main focus is on defending the independent academic status of lexicography and its corollary: The process of designing, compiling and updating (specialised) online dictionaries needs a theoretical framework that addresses general and specific aspects. The former are common to all types of information tools, the latter are mainly dependent on the media for which the information tool is constructed and their specific target users. This books offers both aspects and moves from the highest level of abstraction to very detailed aspects of lexicographic work, e.g. how to convert an originally-conceived polyfunctional online dictionary into several monofunctional usage-based ones. The book illustrates that the theory and the methodology currently used by advocates of the Function Theory of Lexicography offers better results than other approaches and therefore makes its case for proposing the Function Theory for terminological/terminographical work.

english accounting terms: Metaphor and Mills Honesto Herrera-Soler, Michael White, 2012-07-04 While the role of metaphor in economics and business has produced multiple research articles, no comprehensive book-length study has yet appeared. The present book is a timely attempt to fill this gap, giving a global coverage of the role of metaphor in business and economics. It spans time (from Classical Greece to the current business network meeting-room), space (from Europe through the Americas to Asia), cultures and languages (from continental European languages, Brazilian Portuguese to Chinese). The theoretical grounding of the book is the Conceptual Theory of Metaphor taken in a dynamic sense as evolving with on-going research. The theory is thus used, adapted and refined in accordance with the evidence provided. Metaphor is shown to be theory constitutive in the elaboration of economic thinking down through the ages while, at the same time, the emphasis on evidence open to historical, cross-cultural and cross-linguistic considerations align with the current notion of situatedness. The book is a rich source of information for researchers and students in the fields of Metaphor Studies, Economics, Discourse Analysis, and Communication Studies, among others.
