

geopolitical heartland

geopolitical heartland is a foundational concept in political geography and international relations, referring to a central region whose control is believed to be crucial for global dominance. This theory, originally formulated by Halford Mackinder in the early 20th century, emphasizes the strategic importance of the Eurasian landmass, particularly the vast interior regions. Understanding the geopolitical heartland offers insight into historical and contemporary power struggles, territorial ambitions, and the shifting balance of global influence. This article explores the origins, significance, and modern implications of the geopolitical heartland theory. Additionally, it examines relevant geopolitical strategies and how this concept shapes international policies today. The following sections will provide a comprehensive overview of the geopolitical heartland and its enduring relevance in global affairs.

- Origins and Definition of the Geopolitical Heartland
- Strategic Importance of the Geopolitical Heartland
- Geopolitical Heartland in Historical Context
- Contemporary Geopolitical Implications
- Challenges and Criticisms of the Heartland Theory

Origins and Definition of the Geopolitical Heartland

The concept of the geopolitical heartland was first articulated by British geographer Halford Mackinder in 1904. Mackinder proposed that the control of the central Eurasian landmass, which he termed the "Heartland," was crucial for global supremacy. According to his theory, the Heartland was a pivot area surrounded by vast resources and strategic depth, making it a formidable base for power projection. This region roughly corresponds to parts of modern-day Russia, Central Asia, and Eastern Europe. The geopolitical heartland theory emphasizes land power over naval dominance, challenging the prevailing maritime theories of the time.

Definition and Geographic Scope

The geopolitical heartland is defined as the central area of the Eurasian continent, characterized by its vast size, natural barriers, and limited access to the sea. It includes territories such as Siberia, Kazakhstan, and

parts of Eastern Europe. This landlocked region's geography provides significant defensive advantages and abundant natural resources that can sustain prolonged military and economic activities. The theory suggests that whoever controls the heartland commands access to the surrounding "Inner Crescent" or "Rimland," thereby controlling a substantial portion of the world's population and industrial capacity.

Mackinder's Heartland Theory Explained

Mackinder famously summarized his theory with the dictum: "Who rules East Europe commands the Heartland; who rules the Heartland commands the World-Island; who rules the World-Island commands the world." This statement encapsulates the hierarchical strategic importance of the heartland in global geopolitics. The "World-Island" refers to the combined continents of Europe, Asia, and Africa, housing the majority of the world's population and resources. The heartland, as the core of this massive landmass, therefore holds unparalleled strategic value.

Strategic Importance of the Geopolitical Heartland

The geopolitical heartland's importance stems from its geographic, economic, and military characteristics. Its vast size and resource wealth make it a critical area for sustaining large populations and armies. Additionally, its position at the center of Eurasia allows for the projection of power across multiple directions, influencing neighboring regions and beyond. Control of this area can provide economic leverage through resource extraction and strategic transit routes.

Natural Resources and Economic Potential

The heartland contains extensive reserves of fossil fuels, minerals, and arable land. These resources are vital for industrial development and military capabilities. Countries controlling these resources gain significant economic advantages, reducing reliance on external supplies and strengthening domestic industries. The economic potential of the heartland makes it a target for powers aiming to secure long-term stability and growth.

Military and Strategic Advantages

From a military perspective, the heartland offers defensible terrain and a buffer against external invasions. Its vast expanse complicates enemy offensives and facilitates the mobilization of large forces. Moreover, controlling the heartland enables power projection across Europe, Asia, and the Middle East. Historically, this has allowed dominant powers to influence

neighboring countries and maintain regional hegemony.

Geopolitical Positioning

The heartland's central position in Eurasia makes it a pivotal hub for transportation and communication networks. Railways, pipelines, and highways traversing this region link multiple continents and markets. This connectivity further enhances the geopolitical significance of the heartland, enabling economic integration and strategic coordination across vast distances.

Geopolitical Heartland in Historical Context

The geopolitical heartland has played a central role in numerous historical conflicts and power struggles. Its strategic importance has influenced the policies of major empires and states seeking dominance in Eurasia. Understanding these historical dynamics sheds light on the enduring relevance of the heartland concept in contemporary geopolitics.

Heartland and the Russian Empire

The Russian Empire historically expanded across the Eurasian heartland, capitalizing on its vast resources and strategic depth. This expansion allowed Russia to become a major continental power with influence extending into Europe and Asia. The empire's control over the heartland was a key factor in its military and political strength.

World Wars and the Heartland

During both World Wars, the heartland was a critical theater of conflict. Control over Eastern Europe and the territories within the heartland often determined the outcome of these global struggles. The Soviet Union's dominance in this region after World War II underscored the heartland's strategic importance in the Cold War era.

Cold War and the Eurasian Balance

The Cold War rivalry between the United States and the Soviet Union was heavily influenced by the geopolitical heartland. The Soviet Union's control of much of the heartland allowed it to exert influence over Eastern Europe and parts of Asia. Meanwhile, Western powers sought to contain this influence through alliances and strategic positioning along the heartland's periphery.

Contemporary Geopolitical Implications

In the 21st century, the geopolitical heartland remains a critical factor in global strategic calculations. Emerging powers and established states continue to recognize the importance of this region for economic development, security, and influence. Modern infrastructure projects, military strategies, and diplomatic efforts reflect ongoing competition centered on the heartland.

Russia's Role in the Geopolitical Heartland

Russia continues to be the dominant actor in the geopolitical heartland, leveraging its geographic position and resource wealth. Its policies emphasize maintaining control over surrounding buffer states and expanding influence through economic and military means. Russia's strategic initiatives in Central Asia and Eastern Europe demonstrate the heartland's ongoing centrality to its national security strategy.

China and the Heartland Connectivity

China's Belt and Road Initiative (BRI) aims to enhance connectivity across the Eurasian landmass, intersecting with the geopolitical heartland. By investing in infrastructure and trade networks, China seeks to integrate the heartland into its economic sphere and extend its influence westward. This development has significant implications for regional power dynamics and global trade routes.

United States and Western Strategies

The United States and its allies have historically sought to limit the influence of heartland powers through alliances and military presence along the Eurasian periphery. NATO expansion and partnerships in Central Asia reflect efforts to counterbalance Russian and Chinese influence in the region. These strategies highlight the ongoing geopolitical contest centered on the heartland.

List of Contemporary Geopolitical Factors Influencing the Heartland

- Energy resource competition and pipelines
- Infrastructure development and trade corridors
- Military alliances and deployments

- Regional conflicts and proxy wars
- Economic integration and regional organizations

Challenges and Criticisms of the Heartland Theory

While the geopolitical heartland theory has been influential, it has also faced criticism and challenges. The evolving nature of warfare, technology, and global politics has prompted reconsideration of the theory's assumptions and relevance. Understanding these critiques provides a balanced perspective on the heartland's role in modern geopolitics.

Technological Advances and Air Power

Technological innovations, including air power and missile technology, have challenged the notion that control over landlocked regions guarantees security and dominance. Air mobility reduces the strategic advantage of geographic barriers, allowing powers to project force across greater distances regardless of terrain. This development complicates the traditional heartland concept.

Maritime Power and Globalization

Globalization and the significance of maritime trade routes continue to emphasize the importance of naval power. Critics argue that control of sea lanes and ports remains essential for economic and military influence, sometimes outweighing the advantages of land dominance. The heartland theory's focus on land power may therefore overlook critical aspects of contemporary geopolitics.

Political and Cultural Diversity

The geopolitical heartland encompasses diverse ethnic, political, and cultural groups, which complicates unified control and governance. Internal divisions and separatist movements can undermine the cohesion needed to leverage the heartland's strategic advantages. This reality challenges the simplicity of the heartland theory's assumptions about territorial control.

Environmental and Economic Constraints

Harsh climatic conditions and underdeveloped infrastructure in parts of the

heartland limit its accessibility and economic potential. These constraints affect the ability of states to fully capitalize on the region's resources and strategic position. As a result, the heartland's influence may be less absolute than originally posited.

Frequently Asked Questions

What is the concept of the geopolitical heartland?

The geopolitical heartland refers to a central region of a continent that holds strategic importance for global power due to its geographic position, resources, and influence over surrounding areas. It is often associated with the theory proposed by Halford Mackinder, who identified the Eurasian landmass as the 'Heartland' crucial for controlling global geopolitics.

Who first introduced the theory of the geopolitical heartland?

The theory of the geopolitical heartland was first introduced by British geographer Halford Mackinder in 1904. He argued that the control of the central Eurasian landmass, or 'Heartland,' was key to global dominance.

Why is the geopolitical heartland considered strategically important?

The geopolitical heartland is considered strategically important because it is centrally located, resource-rich, and difficult to access by sea powers. Controlling it can provide significant military and economic advantages, influence over surrounding regions, and a base for projecting power globally.

How does the concept of the geopolitical heartland influence modern geopolitics?

The concept influences modern geopolitics by highlighting the strategic significance of Eurasian countries such as Russia, China, and Central Asian states. It informs policies related to regional alliances, infrastructure projects like the Belt and Road Initiative, and military strategies aimed at controlling or accessing the heartland region.

What criticisms exist regarding the geopolitical heartland theory?

Critics argue that the geopolitical heartland theory is overly deterministic and outdated due to technological advancements like air power, cyber warfare, and globalization. They contend that control over landmass alone no longer guarantees global dominance and emphasize the importance of maritime,

economic, and diplomatic factors.

Additional Resources

1. *Heartland: The Rise and Decline of a Geopolitical Concept*

This book explores the origins and evolution of the Heartland theory, initially proposed by Halford Mackinder. It delves into how the idea has influenced geopolitical strategies throughout the 20th and 21st centuries. The author examines the strategic importance of Eurasia and its impact on global power dynamics.

2. *The Geopolitics of Eurasia: Understanding the Heartland*

Focusing on the vast Eurasian landmass, this book analyzes the geopolitical significance of the Heartland region. It discusses contemporary issues such as resource control, regional conflicts, and the ambitions of major powers like Russia and China. The work offers insights into how Eurasia remains central to global strategic interests.

3. *Halford Mackinder and the Heartland Theory: A Legacy of Geopolitical Thought*

This biography and analysis highlight Mackinder's contributions to geopolitical theory. It provides detailed commentary on his Heartland hypothesis, linking it to the broader context of imperialism and world politics. Readers gain a deeper understanding of the lasting impact of Mackinder's ideas.

4. *Strategic Imperatives: The Heartland and Global Power*

This book investigates how control over the Heartland region can shape global power structures. It examines historical case studies and contemporary geopolitical strategies that emphasize land-based power. The author argues that despite technological advances, the Heartland remains crucial to international security.

5. *The New Great Game: Geopolitics and the Heartland in the 21st Century*

Addressing modern geopolitical competition, this book looks at the renewed interest in the Heartland amidst shifting alliances and emerging powers. It highlights the strategic maneuvers of countries involved in Central Asia and surrounding areas. The narrative connects traditional Heartland theory with current global challenges.

6. *Geopolitical Chessboard: The Heartland's Role in World Affairs*

Through a series of essays, this collection discusses the Heartland's pivotal role in shaping international relations. Contributors analyze economic, military, and cultural dimensions of the Heartland's influence. The book provides a multidisciplinary perspective on why this region remains a geopolitical chessboard.

7. *Energy and the Heartland: Resources, Power, and Geopolitics*

This volume focuses on the energy resources within the Heartland and their impact on global politics. It explores how oil, gas, and mineral wealth drive

the strategic importance of Eurasian territories. The book also considers environmental and economic implications of resource competition.

8. *The Heartland in Historical Perspective: Empires, Wars, and Borders*

Offering a historical overview, this book traces the rise and fall of empires that dominated the Heartland region. It discusses how shifting borders and conflicts have shaped the geopolitical landscape over centuries. Readers gain insight into the enduring strategic value of the Heartland.

9. *Geopolitics and the Future of the Heartland*

This forward-looking work assesses potential scenarios for the Heartland amid global change. It evaluates technological, environmental, and political trends that could redefine the region's role. The author provides policy recommendations for stakeholders engaged in the Heartland's future.

geopolitical heartland: Heartland Halford Mackinder, 2022-03-03

geopolitical heartland: Rethinking Geopolitics Simon Dalby, Gearoid O.u Tuathail, 2002-01-22 Rethinking Geopolitics argues that the concept of geopolitics needs to be conceptualised anew as the twenty-first century approaches. Challenging conventional geopolitical assumptions, contributors explore: * theories of post-modern geopolitics * historical formulations of states and cold wars * the geopolitics of the Holocaust * the gendered dimension of Kurdish insurgency * the cold war world * political cartoons concerning Bosnia * Time magazine representations of the Persian Gulf * the Zapatistas and the Chiapas revolt * the new cyber politics * conflict simulations in the US military * the emergence of a new geopolitics of global security. Exploring how popular cultural assumptions about geography and politics constitute the discourses of contemporary violence and political economy, Rethinking Geopolitics shows that we must rethink the struggle for knowledge, space and power.

geopolitical heartland: Geopolitics Francis P. Sempa, 2002 Writers, observers, and practitioners of international politics frequently invoke the term geopolitics to describe, explain, or analyze specific foreign policy issues and problems. Such generalized usage ignores the fact that geopolitics as a method of understanding international relations has a history that includes a common vocabulary, well-established if sometimes conflicting concepts, an extensive body of thought, and a recognized group of theorists and scholars. In Geopolitics, Francis P. Sempa presents a history of geopolitical thought and applies its classical analyses to Cold War and post-Cold War international relations. While mindful of the impact of such concepts as globalization and the information revolution on our understanding of contemporary events, Sempa emphasizes traditional geopolitical theories in explaining the outcome of the Cold War. Using the work of Halford Mackinder, James Burnham, Nicholas Spykman, Alfred Thayer Mahan, and others, he shows that, even though the struggle between the Western allies and the Soviet empire was unique in its ideological component and nuclear standoff, the Cold War fits into a recurring geopolitical pattern. It can be seen as a consequence of competition between land powers and sea powers, and between a

potential Eurasian hegemonic power and a coalition of states opposed to that would-be hegemony. The collapse of the Soviet empire ended the most recent threat to global stability. At the dawn of the twenty-first century, no power or alliance of powers poses an immediate threat to the global balance of power. Indeed, the end of the Cold War generated hopes for a new world order and predictions that economics would replace geopolitics as the driving force in international politics. However, as Sempa points out, Russian instability, the nuclear dimension of the India-Pakistan conflict, and Chinese bids for dominance have turned the Asia-Pacific region into what Mahan called debatable and debated ground. Russia, Turkey, Iran, India, Pakistan, China, Japan, the Koreas, and the United States all have interests that collide in one or more of the areas of this region. The timeliness and deep historical perspective of Sempa's analysis will remind statesmen, strategists, and interested citizens that the current world situation will not last forever. The defeat of one would-be hegemonic power is likely to be followed by a new challenger or challengers to current stability in the international system.

geopolitical heartland: The Threat of Geopolitics to International Relations William Mallinson, 2016-09-23 Geopolitics, both in name, and in its application via geostrategy, is a controversial area of international relations. Although the practice of obtaining resources is as old as Mankind, the word came into its own with the imperial policies of the great powers in the nineteenth century, was used to justify world wars, went into decline, but was 'taken to America' and then re-exported to Europe after the last war by the likes of Henry Kissinger. Nowadays, the term is used unconsciously by politicians obsessed with power, often to justify war. This book tears apart the simplistic thinking of geopolitics, and proposes its replacement with the authors' own method of 'geohistory', a method based on recognising that at the base of any analysis and evaluation of the international situation lie human characteristics.

geopolitical heartland: The Geopolitics of China's Belt and Road Initiative Theodor Tudoroiu, 2023-11-30 This book argues that China's Belt and Road Initiative should be seen more as a geopolitical project and less as a global economic project, with China aiming to bring about a new Chinese-led international order. It contends that China's international approach has two personas - an aggressive one, focusing on a nineteenth century-style territorial empire, which is applied to Taiwan and the seas adjacent to China; and a new-style persona, based on relationship building with the political elites of countries in the Global South, relying on large scale infrastructure projects to help secure the elites in power, a process often leading to lower democratic participation and weaker governance structures. It also shows how this relationship building with elites leads to an acceptance of Chinese norms and to changes in states' geopolitical preferences and foreign policies to align them with China's geopolitical interests, with states thereby joining China's emerging international order. Overall, the book emphasizes that this new-style, non-territorial "empire" building based on relationships is a major new development in international relations, not fully recognized and accounted for by international relations experts and theorists.

geopolitical heartland: Heartlands of Eurasia Anita Sengupta, 2009-07-16 Heartlands of Eurasia explores how received metageographical knowledge informs the understanding of global processes and is subsequently transformed into geopolitical reasoning with foreign policy implications. It provides a detailed examination of writings, from both within the region and outside, that look into the significance of Halford Mackinder's heritage in the context of a vastly changed world situation. In particular, it attempts to examine how policy makers and strategic thinkers have used these geopolitical concepts as justification for their policy in the region. Finally, it attempts an analysis of the extent to which this policy thinking was translated into practice. While the study looks into how the vision of the 'pivotal' significance of a vast expanse of land finds its echoes in contemporary narratives, it also underlines the very creative ways in which Mackinder's ideas have been reinterpreted in keeping with the changing global dynamics. Making use of the way in which the region has been traditionally defined and the way in which the people defined themselves, the study brings into focus a debate on the usefulness of region or 'area'-based studies that are located in geographical imaginations. Anita Sengupta uses this connection to examine the following issues:

geopolitical imaginations and their relevance in identifying 'areas' in the present context; the intersection between how areas are defined from an outsider perspective and how people define themselves; the extent to which these definitions have influenced policy; and the possibility or feasibility of the development of alternative geostrategic discourses. Mackinder himself did not specify the geographical area identified first as the 'pivot' and later the 'heartland,' but his ideas were focused on the 'closed heartland of Euro-Asia,' an area that was unassailable by sea power. This study therefore centers its debates around the Eurasian space in general, though the focus is on the Central Asian region and Uzbekistan in particular. The book is ideal for specialists working on the Eurasian region, graduate students interested in geopolitics as well as Eurasian and Central Asian studies, and undergraduates studying political science and international relations.

geopolitical heartland: Geopolitics, Geography and Strategic History Geoffrey Sloan, 2017-02-17 This volume examines geopolitics by looking at the interaction between geography, strategy and history. This book addresses three interrelated questions: why does the geographical scope of political objectives and subsequent strategy of states change? How do these changes occur? Over what period of time do these changes occur? The theories of Sir Halford Mackinder and Nicholas Spykman are examined in order to provide an analytical narrative for five case studies, four historical and one contemporary. Taken together they offer the prospect of converting descriptions of historical change into analytic explanations, thereby highlighting the importance of a number of commonly overlooked variables. In addition, the case studies will illuminate the challenges that states face when attempting to change the scope of their foreign policy and geo-strategy in response to shifts in the geopolitical reality. This book breaks new ground in seeking to provide a way to understand why and how the geographical scope of political objectives and subsequent strategy both expands and contracts. This book will be of much interest to students of geopolitics, strategic studies, military history, and international relations.

geopolitical heartland: The Geopolitics Of Southern Africa Kent H Butts, Paul R Thomas, 2019-07-09 South Africa is the dominant force in an area that is of increasing strategic importance to the West, yet few studies address the geopolitical pressures that dictate the course of events there. Analyzing South Africa's base of power, the authors argue that because South Africa's relationships with other states in Southern Africa are asymmetrical in nature, the country has substantial economic and political leverage in the region. Control of Southern Africa's transport infrastructure and the ability to project a conventional or surrogate military presence throughout the region, for example, gives South Africa the power to affect the economic and political stability of virtually all regional states. Asymmetry also characterizes relationships at the global level. Because the West depends upon South Africa for access to the region's strategic minerals, for the security of the Cape oil route, and for the country's ability to counterbalance the Soviet presence in Southern Africa, South Africa exercises considerable influence over the African foreign policies of the superpowers. Focusing on the major geopolitical variables affecting South Africa's ability to sustain power, the authors analyze the economic and geographic factors that contribute to asymmetrical relationships and examine the pluralism that divides South African society. Pretoria's successful foreign policy, which has created a security corridor of new buffer states, is given particular emphasis. In addition, the authors provide a detailed analysis of South Africa's minerals-based economy and discuss the implications for regional stability of economic sanctions against South Africa. Finally, they outline a policy framework that takes regional economic, political, and geographic realities into account.

geopolitical heartland: Geopolitics Francis Sempa, 2017-07-12 Writers, observers, and practitioners of international politics frequently invoke the term geopolitics to describe, explain, or analyze specific foreign policy issues and problems. Such generalized usage ignores the fact that geopolitics as a method of understanding international relations has a history that includes a common vocabulary, well-established if sometimes conflicting concepts, an extensive body of thought, and a recognized group of theorists and scholars. In *Geopolitics*, Francis P. Sempa presents a history of geopolitical thought and applies its classical analyses to Cold War and post-Cold War

international relations. While mindful of the impact of such concepts as globalization and the information revolution on our understanding of contemporary events, Sempa emphasizes traditional geopolitical theories in explaining the outcome of the Cold War. He shows that, the struggle between the Western allies and the Soviet empire was unique in its ideological component and nuclear standoff, the Cold War fits into a recurring geopolitical pattern. It can be seen as a consequence of competition between land powers and sea powers, and between a potential Eurasian hegemonic power and a coalition of states opposed to that would-be hegemony. The collapse of the Soviet empire ended the most recent threat to global stability. Acting as a successor to the British Empire, the United States organized, funded, and led a grand coalition that successfully countered the Soviet quest for domination. No power or alliance posed an immediate threat to the global balance of power. Indeed, the end of the Cold War generated hopes for a new world order and predictions that economics would replace geopolitics as the driving force in international politics. Russian instability, the nuclear dimension of the India-Pakistan conflict, and Chinese bids for dominance have turned the Asia-Pacific region into what Mahan called debatable and debated ground. Russi

geopolitical heartland: Geographies, Genders and Geopolitics of James Bond Lisa Funnell, Klaus Dodds, 2016-12-27 This book discusses the representational geographies of the Bond film franchise and how they inform our reading of 007 as a hero. Offering a new and interdisciplinary lens through which the franchise can be analyzed, Funnell and Dodds explore a range of topics that have been largely, if not entirely, overlooked in Bond film scholarship. These topics include: the shifting and gendering of geopolitical relations; the differing depiction and evaluation of vertical/modern and horizontal/pre-modern spaces; the use of classical elements in defining gender, sexuality, heroic competency, and geopolitical conflict; and the ongoing importance of haptics (i.e. touch), kinesics (i.e. movement), and proxemics (i.e. the use of space) in defining the embodied and emotive world of Bond. This book is comprehensive in nature and scope as it discusses all 24 films in the official Bond canon and theorizes about the future direction of the franchise.

geopolitical heartland: Engaging Geopolitics Kathleen E Braden, Fred M Shelley, 2014-09-11 *Engaging Geopolitics* provides a comprehensive introduction to the influence of geography, demography and economics on politics and international relations in the world in which we live today. The authors' expressed aim is to make geopolitics more accessible to undergraduate students, with the hope that the book will be an ideal starting pointing for those who will be moving vertically into more advanced courses in political geography or laterally into other concerns of international affairs.

geopolitical heartland: *Geopolitics and Empire* Gerry Kearns, 2009-06-11 *Geopolitics and Empire* examines the relations between two phenomena that are central to modern conceptions of international relations. Geopolitics is the understanding of the inter-relations between empires, states, individuals, private companies, NGOs and multilateral agencies as these are expressed and shaped spatially. This view of the world achieved notoriety as the scientific basis claimed by Nazi ideologists of global conquest. However, under this or another name, similar sets of ideas were important on both sides of the Cold War and now have a renewed resonance in debates over the New World Order of the so-called Global War on Terror. Geopolitics is a way of describing the conflicts between states as constrained by both physical and economic space. It makes such conflicts seem inevitable. The argument of the book is that this view of the world continues to appear salient because it serves to make the projection of force overseas seem an inevitable aspect of the foreign policy of states. This quasi-Darwinian view of international relations makes the pursuit of Empire appear a responsibility of larger and more powerful states. Powerful states must become Empires or submit to others seeking something similar. In its associations with Empire, the study of Geopolitics returns continually to the ideas of a British geographer who never himself used the term. Halford Mackinder is the source of many of the ideas of Geopolitics and by examining his ideas both in their original context and as they have been repeatedly rediscovered and reinvented this book contributes to current discussions of the ideology and practices of the US Empire today.

geopolitical heartland: Eurasian Maritime Geopolitics Kent E. Calder, 2025-02-07 Eurasian Maritime Geopolitics by Kent E. Calder examines the strategic geography of the sea lanes from Northeast Asia through the Indian Ocean to Europe, through which much of the world's energy and information flow. Calder shows how changing technology and economic patterns have profoundly transformed the global significance of those passageways since the end of the Cold War, with fateful consequences for the strategic calculations of both the United States and a rising China. The decline of the US shipping and shipbuilding sectors, coupled with the rise of their Chinese counterparts, is a major part of this hybrid equation. The book provides readers a history of the changing economic role of the sea lanes as well as the decline of US maritime competitiveness. It chronicles how maritime flows of energy, commodities, and information through submarine cables have increased. Calder's clear eyed assessment documents the uncertainties relating to Eurasian sea lanes stretching from Taiwan to the Red Sea and beyond in the post-Ukraine world.

geopolitical heartland: Globalization and Geopolitics in the Middle East Anoushiravan Ehteshami, 2007-03-14 Examining globalization in the Middle East, this book provides a much needed assessment of the impact of globalization in the 'greater' Middle East, including North Africa, in the context of the powerful geopolitical forces at work in shaping the region today. Written by a well-known authority in this area, this book demonstrates that, unlike in other regions, such as East Asia, geopolitics has been a critical factor in driving globalization in the Middle East. The author argues that whereas elsewhere globalisation has opened up the economy, society, culture and attitudes to the environment; in the Middle East it has had the opposite effect, with poor state formation, little interregional trade, foreign and interregional investment, and reassertion of traditional identities. This book explores the impact of globalization on the politics, economies and social environment of the greater Middle East, in the context of the region's position as the central site of global geopolitical competition at the start of the twenty-first century.

geopolitical heartland: Russia, Eurasia and the New Geopolitics of Energy Roger E. Kanet, Matthew Sussex, 2015-10-05 By combining perspectives from experts in domestic politics, regional politics, and specialists in international security, this edited volume focuses on the central role of energy production and supply in the Russian-Western competition across Eurasia.

geopolitical heartland: India and Inner Asia Mahesh Ranjan Debata, Selbi Hanova, 2024-02-13 This book studies India's historical, socio-cultural, and trade linkages with Inner Asia. Inner Asia includes the landlocked regions within East Asia and North Asia that are part of today's Western China, Mongolia, the Russian Far East, and Siberia. The book examines issues of geopolitics, geoeconomics, climate change and regional cooperation and discusses the importance of the fabled Silk Road for the countries of Inner Asia. It also analyses the impact India has wielded upon the region through its cultural traits and how Buddhism has remained a binding force between the people of the two regions. Lucid and topical, this book will be useful for scholars and researchers of Asian studies, Central Asian studies, area studies, geopolitics, international trade, international relations, defence and strategic studies, diplomacy and foreign policy, and political studies. It will also be of interest to policymakers, bureaucrats, diplomats and think tanks.

geopolitical heartland: Central Asia and Regional Security Mr P L Dash, Ms Anita Sengupta, Mr Murat M Bakhadirov, 2014-02-15 While security concerns have assumed salience across the globe, Afghanistan's proximity to Central Asia has meant that security or perceptions of insecurity dominate the strategic discourse in the region. Issues that stand out include the challenges that the Central Asian states will face in terms of stability, ethnic tensions, radicalization of youth, destabilization of commodity flows and energy security and the impact that these could have on Central Asian society. However, security cannot just be defined in terms of security at the borders. It needs to be defined in 'cosmopolitan' terms through an array of issues like movements across borders, radicalism within states, the sharing of water, and various multilateral attempts at combating insecurity. This volume is an attempt to focus on some of these issues that reflect on perceptions of security principally from Indian and Uzbek positions. It examines shifts over the last two decades, from debates on the geopolitical importance of the region from a great game

perspective to the salience of new engagements within the international arena.

geopolitical heartland: Geopolitics, Geography and Strategy Colin S. Gray, Geoffrey Sloan, 2014-01-14 Geopolitical conditions influence all strategic behaviour - even when cooperation among different kinds of military power is expected as the norm, action has to be planned and executed in specific physical environments. The geographical world cannot be avoided, and it happens to be 'organized' into land, sea, air and space - and possibly the electromagnetic spectrum including 'cyberspace'. Although the meaning of geography for strategy is a perpetual historical theme, explicit theory on the subject is only one hundred years old. Ideas about the implication of geographical, especially spatial, relationships for political power - which is to say 'geopolitics'- flourished early in the twentieth century. Divided into theory and practice sections, this volume covers the big names such as Mackinder, Mahan and Haushofer, as well as looking back at the vital influence of weather and geography on naval power in the long age of sail (sixteenth to nineteenth centuries). It also looks forward to the consequences of the revival of geopolitics in post-Soviet Russia and the new space-based field of astropolitics.

geopolitical heartland: ITJEMAST 12(4) 2021 , 2021-04-15 ITJEMAST publishes a wide spectrum of research and technical articles as well as reviews, experiments, experiences, modelings, simulations, designs, and innovations from engineering, sciences, life sciences, and related disciplines as well as interdisciplinary/cross-disciplinary/multidisciplinary subjects. Original work is required. Article submitted must not be under consideration of other publishers for publications.

geopolitical heartland: Heartlands of Eurasia Anita Sengupta, 2009-07-16 Heartlands of Eurasia explores how received metageographical knowledge informs the understanding of global processes and is subsequently transformed into geopolitical reasoning with foreign policy implications. It provides a detailed examination of writings, from both within the region and outside, that look into the significance of Halford Mackinder's heritage in the context of a vastly changed world situation. In particular, it attempts to examine how policy makers and strategic thinkers have used these geopolitical concepts as justification for their policy in the region. Finally, it attempts an analysis of the extent to which this policy thinking was translated into practice. While the study looks into how the vision of the 'pivotal' significance of a vast expanse of land finds its echoes in contemporary narratives, it also underlines the very creative ways in which Mackinder's ideas have been reinterpreted in keeping with the changing global dynamics. Making use of the way in which the region has been traditionally defined and the way in which the people defined themselves, the study brings into focus a debate on the usefulness of region or 'area'-based studies that are located in geographical imaginations. Anita Sengupta uses this connection to examine the following issues: geopolitical imaginations and their relevance in identifying 'areas' in the present context; the intersection between how areas are defined from an outsider perspective and how people define themselves; the extent to which these definitions have influenced policy; and the possibility or feasibility of the development of alternative geostrategic discourses. Mackinder himself did not specify the geographical area identified first as the 'pivot' and later the 'heartland,' but his ideas were focused on the 'closed heartland of Euro-Asia,' an area that was unassailable by sea power. This study therefore centers its debates around the Eurasian space in general, though the focus is on the Central Asian region and Uzbekistan in particular. The book is ideal for specialists working on the Eurasian region, graduate students interested in geopolitics as well as Eurasian and Central Asian studies, and undergraduates studying political science and international relations.

Related to geopolitical heartland

"Near to me" or "near me"? - English Language Learners Stack In the NOW Corpus, near me is 31 times more common. This is a different matter with some other position-related words; something can be close to me but not close me, and
