hilly earth society membership: From the Ground Up Efrat Eizenberg, 2016-04-22 Little-known, and hidden between skyscrapers and wide avenues, some 650 community gardens dot New York City. Set within one of the densest and most expensive real estate markets, these gardens are attended by some of the least advantaged residents of the city. Urban residents use these spaces for horticulture, recreation, social gatherings, and artistic and cultural events. They manage the gardens collectively and with relative independence from top-down control. Despite continuous threats from market forces the gardens have been able to thrive as significant community spaces since the 1970s. This book shows how, in the process of attempting to protect these highly contested spaces, residents developed as community leaders and urban activists. Taking an interdisciplinary approach to follow the political development of urban residents, the book examines how everyday spatial practices, social interactions, the production of alternative urban space, and the generation of new urban knowledge render community gardeners into important social actors in the urban scene. The book argues that with this process of production of space a new type of 'organic resident' evolves. These urbanites constantly engage with their urban environment, find ways to make the city more supportive for their collective needs, and produce the city in their own image. Community gardeners as organic residents claim their right to the city, act to materialize their vision of the city, and utilize the special potential of the locale to constitute themselves as powerful social actors on the urban scene.

hilly earth society membership: *Living Sustainably* A. Whitney Sanford, 2017-06-16 In light of concerns about food and human health, fraying social ties, economic uncertainty, and rampant consumerism, some people are foregoing a hurried, distracted existence and embracing a mindful way of living. Intentional residential communities across the United States are seeking the freedom to craft their own societies and live based on the values of nonviolence, self-sufficiency, equality, and voluntary simplicity. In *Living Sustainably*, A. Whitney Sanford reveals the solutions that such communities have devised for sustainable living while highlighting the specific choices and adaptations that they have made to accommodate local context and geography. She examines their methods of reviving and adapting traditional agrarian skills, testing alternate building materials for their homes, and developing local governments that balance group needs and individual autonomy. *Living Sustainably* is a teachable testament to the idea that new cultures based on justice and sustainability are attainable in many ways. Sanford's engaging work demonstrates that citizens can make a conscious effort to subsist in a more balanced, harmonious world.

hilly earth society membership: The Correspondence of Charles Darwin: Charles Darwin, 2017-10-12 This volume is part of the definitive edition of letters written by and to Charles Darwin, the most celebrated naturalist of the nineteenth century. Notes and appendixes put these fascinating and wide-ranging letters in context, making the letters accessible to both scholars and general readers. Darwin depended on correspondence to collect data from all over the world, and to discuss his emerging ideas with scientific colleagues, many of whom he never met in person. The letters are published chronologically: volume 25 includes letters from 1877, the year in which Darwin published *Forms of Flowers* and with his son Francis carried out experiments on plant movement and bloom on plants. Darwin was awarded an honorary LL.D. by Cambridge University, and appeared in person to receive it. The volume contains a number of appendixes, including two on the albums of photograph sent to Darwin by his Dutch, German, and Austrian admirers.
