harrison s practice: Thinking with the Harrisons Anne Douglas, Chris Fremantle, 2024-09-30
Helen Mayer Harrison and Newton Harrison, known as 'the Harrisons', dedicated five decades to exploring and demonstrating a new approach to artistic practice, centred on "doing no work that does not attend to the wellbeing of the web of life." Their collaborative practice pioneered a way of drawing together art and ecology. They closely observed, often with irony and humour, how human intervention disrupts the dynamics of life as a web of interrelationships. The authors of this book 'think with' the Harrisons, critically tracing their poetics as a reimagining and reconfiguring of the arts in response to the unfolding planetary crisis. They draw parallels between the artists' poetics and rethinking in the philosophy of science, particularly drawing on the work of Isabelle Stengers and Alfred North Whitehead. Thinking with the Harrisons is for anyone concerned with the implications of ecology as part of a reimagining of public life, including through the interaction of art and science. Throughout their joint practice, the Harrisons sought to engage policy makers, governments, ecologists, artists, and inhabitants of specific places, sensitizing us to the crises that emerge from grounded experiences of place and time.

harrison s practice: GPs and Purchasing in the NHS Bernard Dowling, 2024-11-01 This title was first published in 2000: The relative performance of health authorities and general practitioners as commissioners of health care services is a crucial question in the current health care policy debate, but hitherto a poorly researched area. This work addresses that topic, and represents a systematic direct comparison of GPs and health authorities as purchasers of health care services. In doing this it centres upon two of the chief controversies about the NHS internal market: the equality of hospital waiting times for fund-holding patients, and the fairness of the budgets received by fund-holding practices for commissioning effective surgery. In discussing the policy implications of the research, the book then addresses what lessons should be learned from the internal market about equity and efficiency in the service now that the present Labour Government is reforming the NHS with the introduction of Primary Care Groups and Primary Care Trusts.

One of the most outstanding characteristic of this volume is its interdisciplinarity and its varied methods of inquiry. The field of environmental humanities is discussed together with ideas such as the role of the public intellectual and *el buen vivir*. Examples of ecofiction from the UK, the US and Spain are analysed while artistic practices aimed at raising awareness of the effects of the Anthropocene are presented as imaginative ways of reacting against climate change and rampant capitalism.
