internet historian ww2: Digital Memory and the Archive Wolfgang Ernst, 2012-12-20 In the popular imagination, archives are remote, largely obsolete institutions: either antiquated, inevitably dusty libraries or sinister repositories of personal secrets maintained by police states. Yet the archive is now a ubiquitous feature of digital life. Rather than being deleted, e-mails and other computer files are archived. Media software and cloud storage allow for the instantaneous cataloging and preservation of data, from music, photographs, and videos to personal information gathered by social media sites. In this digital landscape, the archival-oriented media theories of Wolfgang Ernst are particularly relevant. *Digital Memory and the Archive*, the first English-language collection of the German media theorist's work, brings together essays that present Ernst's controversial materialist approach to media theory and history. His insights are central to the emerging field of media archaeology, which uncovers the role of specific technologies and mechanisms, rather than content, in shaping contemporary culture and society. Ernst's interrelated ideas on the archive, machine time and microtemporality, and the new regimes of memory offer a new perspective on both current digital culture and the infrastructure of media historical knowledge. For Ernst, different forms of media systems—from library catalogs to sound recordings—have influenced the content and understanding of the archive and other institutions of memory. At the same time, digital archiving has become a contested site that is highly resistant to curation, thus complicating the creation and preservation of cultural memory and history.

internet historian ww2: The Heart of the Internet Jacques Vallee, 2003 Jacques Vallee was among the engineers and visionaries who set up the Internet, hoping to connect people -- not control them -- through information. For a few years, it seemed that this dream was being realized. But after the dot com crash of 2001, much of the Web's information flowed into the media giants and corporate conglomerates, leaving millions of Net denizens without true freedom of choice. And then there is the threat of government snooping... All is not lost, but it is time for public and private actions to rebuild the dream and win back our freedom. In *The Heart of the Internet*, Vallee: reconstructs the history of computer technology and destroys a few myths (Eniac was not the first computer; Apple did not invent the mouse, and neither did Xerox.); uses first-person recollections and notes to describe the series of breakthroughs that transformed computers from calculating machines to universal platforms for new media; describes the Internet in today's marketplace, pressured on the one hand by commercial interests seeking to influence not merely our purchases but our thoughts, and on the other by governmental obsession to harness the whole system to its own narrow definitions of security -- sacrificing our privacy and possibly our freedom in the process; states a set of principles for network citizens and suggests how we can create new standards for Internet usage.
