Neurosurgery is a vast subspecialty in medical sciences. A brief textbook covering all aspects of neurosurgery is probably rare, especially for postgraduate students, undergraduate students as well as general physicians. The available neurosurgery textbooks are either very detailed or do not cover all parts of neurosurgery. This book is going to be very useful to those who will be sitting for a neurosurgery postgraduate examination/board examination or looking for concise ideas on neurosurgery. This book is based on recent and established scientific data, covering all parts of neurosurgery that can help them a lot including practicing neurosurgeons and neuroscientists as well. Here more emphasis will be given to common neurosurgical conditions without ignoring less frequent conditions.

kang shin hyuk: Real-Time Database Systems Azer Bestavros, Kwei-Jay Lin, Sang Hyuk Son, 2012-12-06 Despite the growing interest in Real-Time Database Systems, there is no single book that acts as a reference to academics, professionals, and practitioners who wish to understand the issues involved in the design and development of RTDBS. Real-Time Database Systems: Issues and Applications fulfills this need. This book presents the spectrum of issues that may arise in various real-time database applications, the available solutions and technologies that may be used to address these issues, and the open problems that need to be tackled in the future. With rapid advances in this area, several concepts have been proposed without a widely accepted consensus on their definitions and implications. To address this need, the first chapter is an introduction to the key RTDBS concepts and definitions, which is followed by a survey of the state of the art in RTDBS research and practice. The remainder of the book consists of four sections: models and paradigms, applications and benchmarks, scheduling and concurrency control, and experimental systems. The chapters in each section are contributed by experts in the respective areas. Real-Time Database Systems: Issues and Applications is primarily intended for practicing engineers and researchers working in the growing area of real-time database systems. For practitioners, the book will provide a much needed bridge for technology transfer and continued education. For researchers, this book will provide a comprehensive reference for well-established results. This book can also be used in a senior or graduate level course on real-time systems, real-time database systems, and database systems or closely related courses.

kang shin hyuk: Prosthetic Memories Hyaesin Yoon, 2025-01-03 In Prosthetic Memories, Hyaesin Yoon examines the entanglements of humans, animals, and technologies across South Korea and the United States at the turn of the twenty-first century. Interrogating a variety of body-technology interfaces, Yoon outlines an emergent mode of prosthetic memory in which human memory is extended into both machines and animals. Prosthetic memory overflows and provides an alternative to familiar human perception, Western scientific reason, and other senses of knowledge in ways that can foster networks of solidarity, care, and empathy between human and nonhuman subjects. Among other sites and subjects, Yoon examines tongue surgery to correct English pronunciation in Korea, Asian American poetry that engages the human-machine divide, transnational dog cloning, and stem cell research, each of which activates potent postcolonial feminist mnemonics and alliances. In so doing, Yoon narrates the counter-memories of racialized, gendered, diasporic, queer, and marginalized human and nonhuman others that work against the violent and isolating biopolitical and neoliberal forces in contemporary society.
