Two introductory chapters are followed by five chapters that each cover a different genre: Chapter 3, Informational Books; Chapter 4, Fiction; Chapter 5, Biography, Autobiography, and Memoir; Chapter 6, Poetry; and Chapter 7, How-to and Hands-on Books. Each genre chapter consists of four parts: Part 1: Discusses the genre and how content area teachers can use books within that genre to further content learning and enhance literacy skills. Part 2: Offers hands-on instructional strategies and activities using literature, with activities for use in a variety of disciplines. Part 3: Presents individual author studies (three or four per chapter) with bibliographies and guidelines for using the authors' books in content area courses. Part 4: Features an annotated bibliography of specially selected children and young adult literature for that genre, organized by content area. The annotations provide information about the book, which can be used to prepare booktalks, and teaching ideas for using in a specific content area. Altogether these sections contain more than 600 annotated entries tabbed by subject area, including art, English/language arts, languages and culture, math and technology, music, PE/health, science, and social studies/history.

jordan s math adventures: Adventures in Statistics Robert T. Stewart, 2024-07-08 This book is about how statistics play a role in life, whether in business, psychology, biology, economics, or just about anything short of basket weaving. You cannot make a trip to the doctor, watch a football game, or even go to the grocery store without some statistic staring you down. Your age, weight, and cholesterol make you a high risk for diabetes ... the chance that your team will win the game is 12.5 percent ... 4 out of 5 dentists like this toothpaste. What does it all mean? *Adventures in Statistics: How We Live in a World of Numbers* tells you what all those numbers mean. But the book does not spit out a bunch of mathematical formulas; the book tells stories. Stories that explain statistics through popular culture, sports, and history. You're confused about that false positive warning in that drug commercial, the 2007 comedy *Juno* explains how medical tests – including pregnancy tests – fail and why. Not clear about what your coworkers are talking about when they say, 'black swans.' the 1997 blockbuster *Titanic* makes sense of the concept. *Adventures in Statistics: How We Live in a World of Numbers* shows how professionals in medicine, business, politics, sports, and many other fields use numbers. So, just about everyone would gain from reading this book, perhaps even basket weavers.

jordan s math adventures: Literacy and Learning in the Content Areas Sharon Kane, 2017-07-05 The 3rd Edition of Literacy & Learning in the Content Areas helps readers build the knowledge, motivation, tools, and confidence they need as they integrate literacy into their middle and high school content area classrooms. Its unique approach to teaching content area literacy actively engages preservice and practicing teachers in reading and writing and the very activities that they will use to teach literacy to their own students in middle and high school classrooms. Rather than passively learning about strategies for incorporating content area literacy activities, readers get hands-on experience in such techniques as mapping/webbing, anticipation guides, booktalks, class websites, and journal writing and reflection. Readers also learn how to integrate children's and young adult literature, primary sources, biographies, essays, poetry, and online content, communities, and websites into their classrooms. Each chapter offers concrete teaching examples and practical suggestions to help make literacy relevant to students' content area learning. Author Sharon Kane demonstrates how relevant reading, writing, speaking, listening, and visual learning activities can improve learning in content area subjects and at the same time help readers meet national content knowledge standards and benchmarks.

Individual chapters focus on topics such as the role of big data in media research, digital literacy, parenting in the era of mobile media, media diversity in the digital age, the impact of media on child development, children's digital rights, the implications of 'intelligent' characters and parasocial relationships, and the effectiveness of transmedia for informal education. Several chapters also explore the theoretical and methodological challenges facing children's media researchers. Offering new directions for research, the contributors consider the implications of the changing media landscape for parents, educators, advocates, and producers. Leading scholars from North America, Europe and Asia, grounded in different theoretical and methodological traditions, join forces to discuss the impact of growing up in a media-saturated world, and to stimulate thinking about the field of children and media in unexpected ways. This book was originally published as two special issues of the *Journal of Children and Media*.

To crack the case, start thinking like a market detective. David Scott Duncan shows how in his entertaining story of Tazza, a fictional chain of cafes with declining sales and leaders urgently seeking to understand why. The vivid characters of Tazza's market detective force come to their aha moment when they finally understand why their most loyal customers walked out the door—and how they can get them back. The core of the Tazza story is a simple, powerful idea that upends how most businesses view their customers. Customers have "jobs to be done." They "hire" companies to solve a problem or fulfill a need and "fire" them when unhappy. Duncan's fresh way of thinking about how to understand your customers' secret lives provides an innovative path for solving whatever market mysteries you face.

jordan s math adventures: *A Celebration of the EDGE Program's Impact on the Mathematics Community and Beyond* Susan D'Agostino, Sarah Bryant, Amy Buchmann, Michelle Craddock Guinn, Leona Harris, 2019-08-31 The Enhancing Diversity in Graduate Education (EDGE) Program began twenty years ago to provide support for women entering doctoral programs in the mathematical sciences. With a steadfast commitment to diversity among participants, faculty, and staff, EDGE initially alternated between Bryn Mawr and Spelman Colleges. In later years, EDGE has been hosted on campuses around the nation and expanded to offer support for women throughout their graduate school and professional careers. The refereed papers in *A Celebration of the EDGE Program's Impact on the Mathematics Community and Beyond* range from short memoirs, to pedagogical studies, to current mathematics research. All papers are written by former EDGE participants, mentors, instructors, directors, and others connected to EDGE. Together, these papers offer compelling testimony that EDGE has produced a diverse new generation of leaders in the mathematics community. This volume contains technical and non-technical works, and it is intended for a far-reaching audience, including mathematicians, mathematics teachers, diversity officers, university administrators, government employees writing educational or science policy, and mathematics students at the high school, college, and graduate levels. By highlighting the scope of the work done by those supported by EDGE, the volume offers strong evidence of the American Mathematical Society's recognition that EDGE is a program that makes a difference." This volume

offers unique testimony that a 20-year old summer program has expanded its reach beyond the summer experience to produce a diverse new generation of women leaders, nearly half of whom are underrepresented women. While some books with a women-in-math theme focus only on one topic such as research or work-life balance, this book's broad scope includes papers on mathematics research, teaching, outreach, and career paths.

jordan s math adventures: *Constructive Quantum Field Theory II* G. Velo, A.S. Wightman, 2012-12-06 The seventh Ettore Majorana International School of Mathematical Physics was held at the Centro della Cultura Scientifica Erice, Sicily, 1-15 July 1988. The present volume collects lecture notes on the session which was entitled Constructive Quantum Field Theory II. The II refers to the fact that the first such school in 1973 was devoted to the same subject. The school was a NATO Advanced Study Institute sponsored by the Italian Ministry of Scientific and Technological Research and the Regional Sicilian Government. At the time of the 1973 Erice School on Constructive Field Theory, the speakers could summarize a decade of effort on the solution of superrenormalizable models in two dimensional space-time leading to the verification of the axioms of relativistic quantum field theory for these examples. The resulting lecture notes have proved to be exceptionally useful and are still in print. In the decade and a half that have elapsed since that time, there has been much hard work with the ultimate objective of providing a rigorous mathematical foundation for the quantum field theories in four dimensional space-time that summarize a large fraction of our current understanding of elementary particle physics: QCD and the electroweak theory. The lecture notes of the 1988 school record the fact that, although this objective has not been reached, Important progress has been made. The ultraviolet stability of Yang-Mills theory In four dimensions has been treated and renormalizable (not superrenormalizable) models in two dimensional space-time, Gross-Neveu models, have been solved.

In addition to a complete performer's index, two appendices have been included: one detailing the pilot films that led to a series and a second that lists the programs that were spun off from one series into another. Never telecast pilot films can be found in the companion volume, *The Encyclopedia of Unaired Television Pilots, 1945-2018*. Both volumes are the most complete and detailed sources for such information, a great deal of which is based on viewing the actual programs.
