journal of european medicine impact: Health Law and the European Union Tamara K. Hervey, Jean V. McHale, 2004-11-04 How does the law of the European Union affect health law and policy? At first sight, it seems limited. However, despite its restricted formal competence, the EU has recently become increasingly involved in the health field. Litigation based on EU law has resulted in a 'right to receive health care services' across national boundaries which may have huge practical implications for national health systems. The EU has promulgated legislation regulating clinical research, and the marketing of pharmaceuticals; patients' rights are affected by EU legislation on data protection and product liability; the qualifications of health care professionals are legally recognised across the EU; and the EU has acted to promote public health. This book explores the various impacts of measures of EU law on national health law and policy. Through elaboration of selected examples, the authors show that, within the EU, health law cannot be regarded as a purely national affair.

journal of european medicine impact: Benefit-risk balance for medicinal products Council for International Organizations of Medical Sciences (CIOMS), 2025-05-27 This report provides insights into the methods used to evaluate the benefit-risk (BR) balance of a medicinal product. A favourable BR profile must be established for all medicinal products prior to marketing. This balance must be reassessed periodically in the post-marketing setting when new information regarding the benefits and risks, or the landscape of their application, becomes available. This report builds on the foundations of the CIOMS Working Group IV report published in 1998, and entitled: Benefit-Risk Balance for Marketed Drugs: Evaluating Safety Signals; and expands to BR management throughout a product's lifecycle using structured approaches and updated methodologies. This report reflects the consensus opinion of the CIOMS Working Group XII members, including experts in BR assessment drawn from academia, industry, and regulatory organisations. It was finalised after considering comments received during a public consultation. The report is intended for medicinal product developers, regulatory authorities, and key stakeholders including academic and government researchers, healthcare professionals, and patients/consumers – all those interested in how the balance between the benefits and risks associated with a medicinal product is established and managed. <https://doi.org/10.56759/gwfwz1791>

journal of european medicine impact: Medical Devices and the Public's Health Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Public Health Effectiveness of the FDA 510(k) Clearance Process, 2011-10-25 Medical devices that are deemed to have a moderate risk to patients generally cannot go on the market until they are cleared through the FDA 510(k) process. In recent years, individuals and organizations have expressed concern that the 510(k) process is neither making safe and effective devices available to patients nor promoting innovation in the medical-device industry. Several high-profile mass-media reports and consumer-protection groups have profiled recognized or potential problems with medical devices cleared through the 510(k) clearance process. The medical-device industry and some patients have asserted that the process has become too burdensome and is delaying or stalling the entry of important new medical devices to the market. At the request of the FDA, the Institute of Medicine (IOM) examined the 510(k) process. Medical Devices and the Public's Health examines the current 510(k) clearance process and whether it optimally protects patients and promotes innovation in support of public health. It also identifies legislative, regulatory, or administrative changes that will achieve the goals of the 510(k) clearance process. Medical Devices and the Public's Health recommends that the U.S. Food and Drug Administration gather the information needed to develop a new regulatory framework to replace the 35-year-old 510(k) clearance process for medical devices. According to the report, the FDA's finite resources are best invested in developing an integrated premarket and postmarket regulatory framework.
