Overview of Kent Hovind Curriculum

The kent hovind curriculum is a creation-based educational program that presents science, history, and biblical teachings through a literal interpretation of the Bible. Created by Dr. Kent Hovind, the curriculum aims to provide students with an alternative to secular education by focusing on young Earth creationism. It seeks to challenge conventional scientific theories by promoting the idea that the Earth is approximately 6,000 years old and that all life was created by God in six literal days. The curriculum is comprehensive, covering multiple grade levels and subjects, and is often utilized in homeschooling environments.

History and Development

Dr. Kent Hovind established the curriculum after years of lecturing on

creationism and Christian apologetics. His teachings gained popularity among Christian homeschooling families seeking a curriculum that aligns with their faith. Over time, the kent hovind curriculum expanded to include detailed lesson plans, multimedia resources, and instructional guides designed to facilitate teaching creation science.

Curriculum Structure

The kent hovind curriculum is organized into various modules and courses that encompass subjects such as science, history, and Bible studies. Each module is designed to be sequential, allowing students to build knowledge progressively while reinforcing key biblical principles. The curriculum integrates quizzes, tests, and projects to assess comprehension and encourage critical thinking within a biblical framework.

Educational Philosophy and Approach

The kent hovind curriculum is rooted in a literal interpretation of the Bible, particularly the creation account in Genesis. This educational philosophy prioritizes biblical authority over secular scientific consensus. It promotes the idea that scripture provides the ultimate explanation for the origins of the universe, life, and humanity. This approach influences the way scientific and historical topics are presented throughout the curriculum.

Young Earth Creationism

Central to the kent hovind curriculum is the doctrine of young Earth creationism, which asserts that the Earth is relatively young—approximately 6,000 years old—and that all species were created by God within a six-day period. This perspective contrasts sharply with the mainstream scientific view of evolution and deep geological time. The curriculum offers detailed arguments and evidence intended to support this creationist viewpoint.

Biblical Integration

The curriculum integrates biblical teachings with scientific content, emphasizing that all knowledge is derived from God's Word. Lessons frequently reference scripture to explain natural phenomena, encouraging students to interpret scientific data within a biblical worldview. This integration aims to foster spiritual growth alongside intellectual development.

Core Subjects and Course Materials

The kent hovind curriculum encompasses a variety of subjects, with a strong

focus on science and history taught from a creationist perspective. It includes comprehensive materials designed to deliver content effectively and engage students in active learning.

Science Curriculum

The science component covers topics such as biology, geology, astronomy, and physics, all presented through the lens of creationism. Lessons challenge evolutionary theory, promote intelligent design, and discuss the complexities of living organisms as evidence of divine creation. The curriculum incorporates experiments, demonstrations, and visual aids to reinforce concepts.

History and Bible Studies

History courses focus on biblical history as well as world history interpreted through a biblical framework. The Bible studies portion deepens students' understanding of scripture, emphasizing its relevance to scientific and historical knowledge. This dual focus aims to build a coherent worldview grounded in biblical truth.

Supplementary Materials

In addition to textbooks and workbooks, the kent hovind curriculum includes DVDs of lectures, audio recordings, and printable worksheets. These resources provide multimedia learning opportunities and support various teaching styles. The curriculum also offers teacher guides to assist instructors in delivering lessons effectively.

Target Audience and Usage

The kent hovind curriculum is primarily designed for homeschooling families and Christian educators who desire a biblically based educational program. It appeals to those who prioritize faith-based instruction and seek to equip students with a creationist understanding of science and history.

Many homeschooling parents choose the kent hovind curriculum because it aligns with their religious beliefs and offers a structured program that can be adapted to different grade levels. The curriculum's emphasis on biblical integration makes it suitable for families wanting to incorporate faith into every subject.

Church and Private Christian Schools

Some Christian schools and churches utilize the kent hovind curriculum as part of their educational offerings. It provides a resource for teaching science and history that reinforces doctrinal positions and supports religious instruction.

evolutionary biology available. Clear, informative, and comprehensive in scope, *Evolution* opens with a series of major essays dealing with the history and philosophy of evolutionary biology, with major empirical and theoretical questions in the science, from speciation to adaptation, from paleontology to evolutionary development (evo devo), and concluding with essays on the social and political significance of evolutionary biology today. She concludes by applying her theories of medieval performance culture to contemporary religious forms, including creationist museums, Hell Houses, and megachurches.

kent hovind curriculum: *A Voice in the Wilderness* Professor Joseph L Graves Jr., 2022-09-13 Why understanding evolution—the most reviled branch of science—can help us all, from fighting pandemics to undoing racism Evolutionary science has long been regarded as conservative, a tool for enforcing regressive ideas, particularly about race and gender. But in *A Voice in the Wilderness*, evolutionary biologist Joseph L. Graves Jr.—once styled as the “Black Darwin”—argues that his field is essential to social justice. He shows, for example, why biological races do not exist. He dismantles recent work in “human biodiversity” seeking genes to explain the achievements of different ethnic groups. He decimates homophobia, sexism, and classism as well. As a pioneering Black biologist, a leftist, and a Christian, Graves uses his personal story—his journey from a child of Jim Crow to a major researcher and leader of his peers—to rewrite his field. *A Voice in the Wilderness* is a powerful work of scientific anti-racism and a moving account of a trailblazing life.

kent hovind curriculum: *Evolving God* Barbara J. King, 2017-04-21 The author of *How Animals Grieve* “contends that religion . . . is a consequence of primate evolution” in this “brilliant book” (Booklist, starred review). Religion has been a central part of human experience since at least the dawn of recorded history. The gods change, as do the rituals, but the underlying desire remains—a desire to belong to something larger, greater, most lasting than our mortal, finite selves. But where did that desire come from? Can we explain its emergence through evolution? Yes, says biological anthropologist Barbara J. King—and doing so not only helps us to understand the religious imagination, but also reveals fascinating links to the lives and minds of our primate cousins. *Evolving God* draws on King's own fieldwork among primates in Africa and paleoanthropology of our extinct ancestors to offer a new way of thinking about the origins of religion, one that situates it in a deep need for emotional connection with others, a need we share with apes and monkeys. Though her thesis is provocative, and she's not above thoughtful speculation, King's argument is strongly rooted in close observation and analysis. She traces an evolutionary path that connects us to other primates, who, like us, display empathy, make meanings through interaction, create social rules, and display imagination—the basic building blocks of the religious imagination. With fresh insights, she responds to recent suggestions that chimpanzees are spiritual—or even religious—beings, and that our ancient humanlike cousins carefully disposed of their dead well before the time of Neandertals.

"Her interpretations result in a provocative hypothesis about the evolution of spirituality." —The Dallas Morning News

kent hovind curriculum: Going Ape Brandon Haught, 2014-04-22 Before William Jennings Bryan successfully prosecuted John Scopes in the infamous "Scopes Monkey Trial," he was a prominent antievolution agitator in Florida. In *Going Ape*, Brandon Haught tells the riveting story of how the war over teaching evolution began and unfolded in Florida, one of the nation's bellwether states. It still simmers just below the surface, waiting for the right moment to engulf the state. The saga opens with the first shouts of religious persecution and child endangerment in 1923 Tallahassee and continues today with forced delays and extra public hearings in state-level textbook adoptions. These ceaseless battles feature some of the most colorful culture warriors imaginable: a real estate tycoon throwing his fortune into campaigns in Miami; lawmakers attempting to insert the mandatory teaching of creationism into bills; and pastors and school board members squabbling in front of the national media that descends into their small town. The majority of participants, however, have been, and still are, average people, and Haught expertly portrays these passionate citizens and the sense of moral duty that drives each of them. Given a social climate where the teaching of evolution continues to sharply divide neighbors and communities, *Going Ape* is a must-read for anyone concerned with the future of public education.

kent hovind curriculum: Chronology of the Evolution-Creationism Controversy Randy Moore, Mark Decker, Sehoya H. Cotner, 2009-11-25 A unique chronology with entries describing the key events in the 3,000-year conflict between religion and science over the explanation and definition of life on Earth. Exhaustively researched and authoritative, *Chronology of the Evolution-Creationism Controversy* does what no other work does: it examines the conflict between the religious and scientific views of life on Earth in its full 3,000-year historical context, showing readers how this roiling debate has played out over the centuries. With hundreds of entries, *Chronology of the Evolution-Creationism Controversy* describes specific cultural, religious, and scientific events relevant to the evolution-creationism controversy from the first notions of creationism in ancient Egypt to the present. Within this historical approach, it identifies a number of recurring themes that have shaped the debate through the ages, including famous court cases, the recurrence of the intelligent design argument, disagreements over the age of the Earth, and the impact of technological advances on both the scientific and faith-based viewpoints. While approaching the subject globally throughout, the book's second half focuses on tensions between science and religious thought in the United States since the early 1900s.
