lawrence anthony wildlife: *The Last Rhinos* Graham Spence, Lawrence Anthony, 2012-04-01 Another extraordinary story of life on a South African game reserve from the authors of *The Elephant Whisperer*. Lawrence Anthony's South African game reserve is home to many animals he has saved, from a remarkable herd of elephants to a badly behaved bushbaby called George. Described as the Indiana Jones of conservation, when one of his rhinos was brutally slaughtered for her horn, he didn't hesitate to lead an armed response against the poachers. Then he learned that there were only a handful of northern white rhinos left in the wild, living in an area of the Congo controlled by the infamous Lord's Resistance Army and soon to be hunted into extinction. Lawrence knew he had to take action. What followed was an extraordinary adventure, as he headed into the jungle to negotiate with the rebels, while battling to save his own animals from terrible drought and to save the eyesight of his beloved elephant matriarch Nana. *The Last Rhinos* is peopled with unforgettable characters, both human and animal, and is a sometimes funny, sometimes moving, always exciting read.

lawrence anthony wildlife: *Wildlife in the Anthropocene* Jamie Lorimer, 2015-04-01 Elephants rarely breed in captivity and are not considered domesticated, yet they interact with people regularly and adapt to various environments. Too social and sagacious to be objects, too strange to be human, too captive to truly be wild, but too wild to be domesticated—where do elephants fall in our understanding of nature? In *Wildlife in the Anthropocene*, Jamie Lorimer argues that the idea of nature as a pure and timeless place characterized by the absence of humans has come to an end. But life goes on. Wildlife inhabits everywhere and is on the move; Lorimer proposes the concept of wildlife as a replacement for nature. Offering a thorough appraisal of the Anthropocene—an era in which human actions affect and influence all life and all systems on our planet—Lorimer unpacks its implications for changing definitions of nature and the politics of wildlife conservation. *Wildlife in the Anthropocene* examines rewilding, the impacts of wildlife films, human relationships with charismatic species, and urban wildlife. Analyzing scientific papers, policy documents, and popular media, as well as a decade of fieldwork, Lorimer explores the new interconnections between science, politics, and neoliberal capitalism that the Anthropocene demands of wildlife conservation. Imagining conservation in a world where humans are geological actors entangled within and responsible for powerful, unstable, and unpredictable planetary forces, this work nurtures a future environmentalism that is more hopeful and democratic.

lawrence anthony wildlife: *The End of Captivity?* Tripp York, 2015-07-30 In *The End of Captivity?*, Tripp York addresses how we talk about the good of other animals in light of a stark impossibility: their freedom from us. While all of us in the animal (and plant) kingdom are interdependent upon one another, humans are unique in that we are the only animals who keep other animals captive. We keep animals in zoos, sanctuaries, circuses, conservatories, aquariums, research facilities, slaughterhouses, and on our farms and in our homes. York asks what such forms of captivity say about us, and how animal captivity shapes what we imagine to be the purpose of other animals. What does the fact that elephants, tigers, and horses perform in circuses say about how we see the world? What does the reality of zoological parks say about the people who create, support, decry, protest, and patronize them? How important is wildlife conservation for the good of the earth? What does who we put on our plate say about how we understand the theological role of other animals? These are just a few questions York tackles as he weaves through the convoluted politics surrounding the captive animals in our midst.

lawrence anthony wildlife: *Called By The Wild* Conraad De Rosner, Graham Spence, Elaine Bell, 2023-03-13 The thrilling story of a pioneering conservationist working with dogs to protect

wildlife from poachers. Conraad de Rosner is one of the first game rangers to focus on working with specially trained dogs to protect wildlife from poachers – both 'bushmeat' poachers, who use cruel snares to trap animals, and criminal syndicates killing for rhinoceros horn and capturing critically endangered pangolins, the most trafficked animal in the world. Con's life – constantly at risk from poachers, wildlife and even his own fellow rangers – has been saved on numerous occasions by his devoted canine companions. His first dog, Zingela, a Weimaraner, saved Con from near certain death at the hands of two fellow rangers; on another occasion, Zingela alerted Con to a concealed wounded buffalo, one of Africa's most dangerous animals, about to charge. When Zingela was tragically killed, hit by a car while Con was away, the only meagre consolation was that Con had kept Landa, one of the nine puppies sired by Zingela. Landa followed in his father's footsteps as the leader of the canine anti-poaching team that is still operating today. Con's story is an epic of modern-day African wildlife conservation, filled with courage, adventure and romance.

lawrence anthony wildlife: *Displaying Death and Animating Life* Jane C. Desmond, 2016-08-18 The number of ways in which humans interact with animals is almost incalculable. From beloved household pets to the steak on our dinner tables, the fur in our closets to the Babar books on our shelves, taxidermy exhibits to local zoos, humans have complex, deep, and dependent relationships with the animals in our ecosystems. In *Displaying Death and Animating Life*, Jane C. Desmond puts those human-animal relationships under a multidisciplinary lens, focusing on the less obvious, and revealing the individualities and subjectivities of the real animals in our everyday lives. Desmond, a pioneer in the field of animal studies, builds the book on a number of case studies. She conducts research on-site at major museums, taxidermy conventions, pet cemeteries, and even at a professional conference for writers of obituaries. She goes behind the scenes at zoos, wildlife clinics, and meetings of pet cemetery professionals. We journey with her as she meets Kanzi, the bonobo artist, and a host of other animal-artists—all of whom are preparing their artwork for auction.

Throughout, Desmond moves from a consideration of the visual display of unindividuated animals, to mourning for known animals, and finally to the marketing of artwork by individual animals. The first book in the new Animal Lives series, *Displaying Death and Animating Life* is a landmark study, bridging disciplines and reaching across divisions from the humanities and social sciences to chart new territories of investigation.

lawrence anthony wildlife: *How Animals Grieve* Barbara J. King, 2013-03-28 “A touching and provocative exploration of the latest research on animal minds and animal emotions” from the renowned anthropologist and author (The Washington Post). Scientists have long cautioned against anthropomorphizing animals, arguing that it limits our ability to truly comprehend the lives of other creatures. Recently, however, things have begun to shift in the other direction, and anthropologist Barbara J. King is at the forefront of that movement, arguing strenuously that we can—and should—attend to animal emotions. With *How Animals Grieve*, she draws our attention to the specific case of grief, and relates story after story—from fieldsites, farms, homes, and more—of animals mourning lost companions, mates, or friends. King tells of elephants surrounding their matriarch as she weakens and dies, and, in the following days, attending to her corpse as if holding a vigil. A housecat loses her sister, from whom she’s never before been parted, and spends weeks pacing the apartment, wailing plaintively. A baboon loses her daughter to a predator and sinks into grief. In each case, King uses her anthropological training to interpret and try to explain what we see—to help us understand this animal grief properly, as something neither the same as nor wholly different from the human experience of loss. The resulting book is both daring and down-to-earth, strikingly ambitious even as it’s careful to acknowledge the limits of our understanding. Through the moving stories she chronicles and analyzes so beautifully, King brings us closer to the animals with whom we share a planet, and helps us see our own experiences, attachments, and emotions as part of a larger web of life, death, love, and loss.
