mcdonalds job training: Change at Work Peter Cappelli, 1997 A far-reaching transformation is taking place in the US in the relationship between employers and employees. The lessons learned from Japan and from best practice companies like IBM about how job security, training, and internal development can improve employee commitment and performance have given way to a new set of lessons about how companies can reduce fixed costs, increase flexibility, and improve performance by eliminating the elaborate employment systems that prepared employees for long careers in the company. Where the old arrangement protected employees from outside market forces, the new ones drag the market right back in through downsizing, contingent workforces, hiring on the outside for new skills, and compensation contingent on overall organizational performance. New work systems that reengineer processes and empower employees flatten the organizational chart, cutting management jobs in particular and reducing opportunities for career development. The new arrangements shift many of the risks of business from the firm to the employees and make employees, rather than employers, responsible for developing their own skills and careers. They also increase the demands placed on workers while reducing what they receive back for their efforts. While morale is down and stress is up, employee performance seems to be rising largely because of fear driven by the shortage of good jobs. Change at Work explores the theme that employees have paid the price for the widespread restructuring of American firms as illustrated by reduced security, greater effort and hours, and reduced morale. In this important study--commissioned by the National Planning Association's Committee on New American Realities--the authors consider how individuals and employers need to adapt to the new arrangements as well as the implications for important policy issues such as how skills will be developed where the attachment to the firms is sharply reduced. The future is uncertain, but the authors argue that the traditional relationship between employer and employee will continue to erode, making this work essential reading for managers concerned with the profound impact corporate restructuring has had on the lives of workers.

mcdonalds job training: Fast Food, Fast Talk Robin Leidner, 1993-08-04 Attending Hamburger University, Robin Leidner observes how McDonald's trains the managers of its fast-food restaurants to standardize every aspect of service and product. Learning how to sell life insurance at a large midwestern firm, she is coached on exactly what to say, how to stand, when to make eye contact, and how to build up Positive Mental Attitude by chanting I feel happy! I feel terrific! Leidner's fascinating report from the frontlines of two major American corporations uncovers the methods and consequences of regulating workers' language, looks, attitudes, ideas, and demeanor. Her study reveals the complex and often unexpected results that come with the routinization of service work. Some McDonald's workers resent the constraints of prescribed uniforms and rigid scripts, while others appreciate how routines simplify their jobs and give them psychological protection against unpleasant customers. Combined Insurance goes further than McDonald's in attempting to standardize the workers' very selves, instilling in them adroit maneuvers to overcome customer resistance. The routinization of service work has both poignant and preposterous

consequences. It tends to undermine shared understandings about individuality and social obligations, sharpening the tension between the belief in personal autonomy and the domination of a powerful corporate culture. Richly anecdotal and accessibly written, Leidner's book charts new territory in the sociology of work. With service sector work becoming increasingly important in American business, her timely study is particularly welcome.
