Told entirely through fictional eye-witness accounts, *The Ministry For The Future* is a masterpiece of the imagination, the story of how climate change will affect us all over the decades to come. ministry for the future review: Kim Stanley Robinson Andrew Rowcroft, 2024-05-03 Kim Stanley Robinson remains one of the most progressive writers working today. His novels and short

stories have mapped cycles of capitalist violence, economic expansion, and material despoliation, in turn proposing radical visions of social and economic justice through cooperatives, collective agreements, and stewardship of the environment. But if Robinson is readily considered a political author, less attention has been paid to his craft and composition. This book examines Robinson's concern with literary apprenticeship. In novels such as the post-apocalyptic *The Wild Shore*, the intergenerational star-ship narrative *Aurora*, and the tale of Ice Age hunters, *Shaman*, Robinson creates characters who struggle with and against storytelling. In these fictions, apprentices battle against the limits of their interpretative powers as they come to recognise the real pleasures, and the intense hardships, of art and narrative.

ministry for the future review: Horizons of the Future Graham B. Slater, 2024-06-14

Horizons of the Future: Science Fiction, Utopian Imagination, and the Politics of Education examines the relationship between science fiction, education, and social change in the 21st century. Global capitalism is ecologically unsustainable and ethically indefensible; time is running out to alter the course of history if humanity is to have hope of a livable future beyond the next century. However, alternatives are possible, offering much more equality, care, justice, joy, and hope than the established order. Popular culture and schools are key sites of struggles to imagine such alternatives. Drawing on critical theory, cultural studies, and sociology, Slater articulates the promising connection between science fiction and the future of education. He offers cutting-edge engagement with themes, perspectives, and modes of imagination in science fiction that can be mobilized politically and pedagogically to envision and enact critical forms of education that cultivate new utopian ways of relating to self, society, and the future. This thought-provoking book will be of interest to scholars and students in the social sciences and education.

ministry for the future review: The Future of the Soviet Past Anton Weiss-Wendt, Nanci Adler, 2021-10-05 In post-Soviet Russia, there is a persistent trend to repress, control, or even co-opt national history. By reshaping memory to suit a politically convenient narrative, Russia has fashioned a good future out of a bad past. While Putin's regime has acquired nearly complete control over interpretations of the past, *The Future of the Soviet Past* reveals that Russia's inability to fully rewrite its Soviet history plays an essential part in its current political agenda. Diverse contributors consider the many ways in which public narrative shapes Russian culture—from cinema, television, and music to museums, legislature, and education—as well as how patriotism reflected in these forms of culture implies a casual acceptance of the valorization of Stalin and his role in World War II. *The Future of the Soviet Past* provides effective and nuanced examples of how Russia has reimagined its Soviet history as well as how that past still influences Russia's policymaking.

ministry for the future review: Legal Aid and the Future of Access to Justice Catrina Denvir, Jacqueline Kinghan, Jessica Mant, Daniel Newman, 2023-07-27 This open access book provides a snapshot of the state of contemporary access to justice in England and Wales. Legal aid lawyers provide a critical function in supporting individuals to address a range of problems. These are problems that commonly intersect with issues of social justice, including crime, homelessness, domestic violence, family breakdown and educational exclusion. However, the past few decades have seen a clear retreat from the tenets of the welfare state, including, as part of this, the reduced availability of legal aid. This book examines the impact of austerity and related policies on those at the coalface of the legal profession. It documents the current state of the sector as well as the social and economic factors that make working in the legal aid profession more challenging than ever before. Through data collected via the Legal Aid Census 2021, the book is underpinned by the accounts of over 1000 current and former legal aid lawyers. These accounts offer a detailed demography and insight into the financial, cultural and other pressures forcing lawyers to give up publicly funded work. This book combines a mixture of quantitative and qualitative analysis, allowing readers a broad appreciation of trends in the legal aid profession. This book will equip readers with a thorough knowledge of legal aid lawyers in England and Wales, and aims to stimulate debate as to the fate of access to justice and legal aid in the future. ministry for the future review: World Yearbook of Education 2006 Jenny Ozga, Terri Seddon, Thomas S. Popkewitz, 2013-01-11 This volume considers the ways in which educational research is being shaped by policy across the globe. Policy effects on research are increasingly influential, as policies in and beyond education drive the formation of a knowledge-based economy by supporting increased international competitiveness through more effective, evidence-based interventions in schooling, education and training systems. What consequences does this increased steering have for research in education? How do transnational agencies make their influence felt on educational research? How do national systems and traditions of educational research - and relations with policy - respond to these new pressures? What effects does it have on the quality of research and on the

freedom of researchers to pursue their own agendas? The 2006 volume of the World Yearbook of Education explores these issues, focusing on three key themes: globalising policy and research in education steering education research in national contexts global-local politics of education research. The 2006 volume has a truly global reach, incorporating transnational policy perspectives from the OECD and the European Commission, alongside national cases from across the world in contrasting contexts that include North and South America, Canada, France, Singapore, China, Russia and New Zealand. The range of contributions reflect how pervasive these developments are, how much is new in this situation and to what extent evidence-based policy pressures on research in education build on past relationships between education and policy. This book considers the impact of the steering processes on the work and identities of individual researchers and considers how research can be organised to play a more active role in the politics of the knowledge economy and learning society.

ministry for the future review: The Future of the Korean Peninsula Mason Richey, Jagannath P. Panda, David A. Tizzard, 2021-07-28 This book considers both Koreas - North Korea and South Korea - to examine possible pathways for the years leading up to 2032 and beyond, thus offering a composite picture of Korea and its strategic relevance in Asia and the world at large. Through a combined South-North Olympic team and an effort of jointly hosting the Games, Republic of Korea president Moon Jae-in has marked the year 2032 as special in the future of the Korean Peninsula. Although the International Olympic Committee (IOC) has expressed scepticism about a combined hosting of the Games, the expectation in Korea is that this event will underline the shared destiny of the people inhabiting the peninsula and realign two states still caught in an ideologically fraught civil conflict that is one of the last vestiges of the Cold War. Chapters begin with a brief historical review and analysis of the present, before moving to consider how these will shape the next decade, drawing comparative and complementary analyses. No matter how contrasting the contemporary trajectories of both North and South Korea might appear, 'Korea' as a singular entity is an old concept still containing great possibilities. As the ongoing inter-Korean reconciliation process underscores, the futures of North and South Korea can be found in a complementary singular Korea, which would again represent an important political, strategic, cultural, and social space in Asia. An evaluation of the future trajectory, social awareness and perception of the Koreas, this book offers a valuable contribution to the study of North and South Korea and Asian Politics.

ministry for the future review: Artificial Intelligence and the Future of Defense Stephan De Spiegeleire, Matthijs Maas, Tim Sweijis, 2017-05-17 Artificial intelligence (AI) is on everybody's minds these days. Most of the world's leading companies are making massive investments in it. Governments are scrambling to catch up. Every single one of us who uses Google Search or any of the new digital assistants on our smartphones has witnessed first-hand how quickly these developments now go. Many analysts foresee truly disruptive changes in education, employment, health, knowledge generation, mobility, etc. But what will AI mean for defense and security? In a new study HCSS offers a unique perspective on this question. Most studies to date quickly jump from AI to autonomous (mostly weapon) systems. They anticipate future armed forces that mostly

resemble today's armed forces, engaging in fairly similar types of activities with a still primarily industrial-kinetic capability bundle that would increasingly be AI-augmented. The authors of this study argue that AI may have a far more transformational impact on defense and security whereby new incarnations of 'armed force' start doing different things in novel ways. The report sketches a much broader option space within which defense and security organizations (DSOs) may wish to invest in successive generations of AI technologies. It suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities, societies and economies expect may lie in the realms of prevention and resilience. Also in those areas any large-scale application of AI will have to result from a preliminary open-minded (on all sides) public debate on its legal, ethical and privacy implications. The authors submit, however, that such a debate would be more fruitful than the current heated discussions about 'killer drones' or robots. Finally, the study suggests that the advent of artificial super-intelligence (i.e. AI that is superior across the board to human intelligence), which many experts now put firmly within the longer-term planning horizons of our DSOs, presents us with unprecedented risks but also opportunities that we have to start to explore. The report contains an overview of the role that 'intelligence' - the computational part of the ability to achieve goals in the world - has played in defense and security throughout human history; a primer on AI (what it is, where it comes from and where it stands today - in both civilian and military contexts); a discussion of the broad option space for DSOs it opens up; 12 illustrative use cases across that option space; and a set of recommendations for - especially - small- and medium sized defense and security organizations.
